Executive Summary

The United States Environmental Protection Agency, Region 1 (EPA) has conducted a Five-Year Review of the Remedial Actions (RAs) implemented at the Coakley Landfill Superfund Site in North Hampton and Greenland, New Hampshire in compliance with the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), 42 U.S.C. Section 9601, et seq. EPA conducted this review between December 2010 and September 2011 with technical assistance from the New Hampshire Department of Environmental Services (NHDES).

This is the third Five-Year Review Report for the Site. The triggering action for this review was the date of the second Five-Year Review, signed September 21, 2006. Subsequent reviews are conducted at least every five years. The purpose of the Five-Year Review is to evaluate whether response actions and original performance standards remain protective of human health and the environment.

The response actions for the Site are documented in two Records of Decision (RODs) and five Explanations of Significant Differences (ESDs). The Site is divided into two separate operable units (OUs). The first OU (source control) provided for the remediation of the source of contamination at the Coakley Landfill Site, including the contaminated groundwater beneath and in the vicinity of the landfill. Source control included consolidation onto the landfill of wastes and sediments identified beyond the edge of the landfill and covering the landfill with an impermeable cap. The remedy for the second OU (management of migration) addresses groundwater contamination which has migrated from the landfill. The response action includes using institutional controls (ICs) to prevent use of contaminated groundwater; utilizing natural attenuation to remediate the contaminated groundwater plume; and groundwater monitoring. The Coakley Landfill Site achieved construction completion status with the signing of the Preliminary Close-Out Report on September 29, 1999.

Overall, the remedy at the Coakley Landfill Superfund Site currently protects human health and the environment in the short-term. Long-term protectiveness has been achieved already in OU-1 through the completion and continued maintenance of the landfill cap, long-term monitoring, and use restrictions. Long-term protectiveness will be achieved in OU-2 when interim groundwater cleanup levels for all contaminants of concern are met and restrictions on the use of groundwater within OU-2 can be removed. Monitoring of the Site will continue until cleanup levels for all contaminants of concern are met.

Five-Year Review Summary Form

<i>SITE IDENTIFICATION</i>		
Site name: Coakley Landfill		
EPA ID: NHD064424153		
Region: 1	State: NH	City/County: North Hampton and Greenland, Rockingham County
<i>SITE STATUS</i>		
NPL status: Final		
Remediation status Complete		
Multiple OUs? Yes	Construction completion date: 09/29/1999	
Has site been put into reuse? No		
<i>REVIEW STATUS</i>		
Lead agency: Potential Responsible Party (PRP) with U.S. Environmental Protection Agency (EPA) and State oversight		
Author name: Gerardo Millán-Ramos		
Author title: Remedial Project Manager	Author affiliation: EPA Region 1	
Review period: 12/2010 to 09/2011		
Date(s) of site inspection: 04/27/2011		
Type of review: <div style="display: flex; justify-content: space-around; margin-top: 5px;"> X Post-SARA Pre-SARA NPL-Removal only </div> <div style="display: flex; justify-content: space-around; margin-top: 5px;"> Non-NPL Remedial Action Site NPL State/Tribe-lead </div> <div style="display: flex; justify-content: space-around; margin-top: 5px;"> Regional Discretion </div>		
Review number: Third		
Triggering action: Completion of Second Five-Year Review		
Triggering action date: 09/21/2006		
Due date (five years after triggering action date): 09/21/2011		

Five-Year Review Summary Form cont'd.

Issues:

1. *Even though no one within the Groundwater Management Zone (GMZ) and its immediate vicinity is exposed to the groundwater, 1,4-Dioxane has been detected at levels exceeding the New Hampshire Ambient Groundwater Quality Standards (NHAGQS) at most monitoring wells within OU-1 and several within OU-2. Additionally, manganese has been detected outside the current GMZ (wells GZ-123 and FPC-2A/B outside the southern edge of the GMZ) above the EPA Health Advisory, and both manganese and arsenic concentrations in the FPC-6 well cluster (inside the eastern edge of the GMZ) suggest that concentrations may exceed the Interim Compliance Levels (ICLs) beyond the GMZ boundary.*
2. *Damage to the fence must be repaired; unlocked monitoring wells and gates must be locked and properly labeled; excessive vegetation in some swales and near the fence must be removed; also construction equipment and materials that are too close to the fence and monitoring wells, must be relocated.*
3. *There is a possible need for groundwater extraction restrictions for properties on the eastern side of the landfill. Groundwater extraction in this area has the potential to alter the flow of groundwater and increase the extent of the plume, thus adding complexities and time to the ongoing remedy.*
4. *Changes to the Institutional Control Plan (ICP) were made at the time the GMZ was being discussed and implemented. However, these changes have not been incorporated into the final ICP that was approved by EPA.*
5. *Groundwater Management Permit will expire on June 18, 2013. Site contaminants within the GMZ continue to exceed state and federal cleanup levels. Exceedences outside GMZ suggest that concentrations may also exceed ICLs beyond the GMZ boundary.*

Recommendations and Follow up actions:

1. *a) Sample monitoring wells at the outermost edge of the GMZ and the two residential wells for 1,4 -Dioxane for the next two rounds.
b) Perform additional analysis to determine whether the site contaminants are moving beyond the edge of the GMZ and whether the current GMZ needs to be expanded and Institutional Controls (ICs) need to be established on additional properties and evaluate the need for further response action.
c) Prepare an Explanation of Significant Differences (ESD) to add 1,4-Dioxane as a COC with an ICL.*
2. *Perform the necessary repairs to the fence, and lock / properly label all monitoring wells that were lacking these features at the time of the inspection. Also remove excessive vegetation and relocate the construction equipment and materials to a safe distance from the fence. Coordinate and document this activity with the regulatory agencies and the Coakley Landfill Group (CLG).*
3. *Evaluate the need for further ICs in the area east of the landfill to prevent altering of groundwater flow as a means of containing the contaminated groundwater plume.*
4. *Update the Final ICP to incorporate changes that were made during the planning and implementation of the GMZ.*
5. *Renew GMP for GMZ and potentially expand boundary if additional tests show site contaminants migrating beyond the current GMZ boundary.*

Protectiveness Statement(s):

OU-1

The remedy at Operable Unit 1 currently protects human health and the environment, both in the short and long term. All human health threats at the Site have been addressed through stabilization and capping of the landfill and the landfill cap is functioning as intended. Installation of fencing and warning signs and deed restrictions are preventing human exposures at the capped landfill. Toxicity tests that were applied to a "worst case scenario" in the sediment samples, revealed no significant ecological impact, and EPA concluded that it is likely there are no significant ecological impacts in surface water and sediment at the Site. In order to ensure that the currently non-toxic concentrations are not increasing significantly, a reduced surface water and sediment monitoring effort will remain in place. Also, the landfill gas monitoring program will remain in place.

OU-2

The remedy at OU-2 currently protects human health and the environment in the short-term because on-site residents are not exposed to the groundwater, as water utility service has been provided, and there is no evidence of such exposure for off-site residents. Also, a GMZ has been established via a NHDES GMP, and ICs have been established for all properties within the GMZ. Groundwater monitoring to determine compliance with the groundwater monitoring standards for the landfill, will continue to be conducted as a component of OU-2. Long-term protectiveness will be achieved when interim groundwater cleanup levels for all contaminants of concern are met.

Site-Wide

Overall, the remedy at the Coakley Landfill Superfund Site currently protects human health and the environment in the short-term. Long-term protectiveness has been achieved already in OU-1 based on the maintenance of the landfill cap, long-term monitoring, and use restrictions. Long-term protectiveness will be achieved in OU-2 when interim groundwater cleanup levels for all contaminants of concern are met and restrictions on the use of groundwater within OU-2 can be removed. Monitoring of the Site will continue until cleanup levels for the contaminants of concern are met.

1.0 INTRODUCTION

The purpose of a five-year review is to determine whether a remedy at a Superfund Site is protective of human health and the environment. The methods, findings and conclusions of reviews are documented in Five-Year Review Reports. In addition, Five-Year Review Reports identify issues found during the review, if any, and identify recommendations to address them.

The Agency has prepared this Five-Year Review Report pursuant to CERCLA and the National Oil and Hazardous Substances Pollution Contingency Plan (NCP), 40 C.F.R. Part 300. CERCLA Section 121(c) as amended states:

If the President selects a remedial action that results in any hazardous substances, pollutants, or contaminants remaining at the site, the President shall review such remedial action no less often than each five years after the initiation of such remedial action to assure that human health and the environment are being protected by the remedial action being implemented. In addition, if upon such review it is the judgment of the President that action is appropriate at such site in accordance with section [104] or [106], the President shall take or require such action. The President shall report to the Congress a list of facilities for which such review is required, the results of all such review, and any actions taken as a result of such reviews.

The Agency interpreted this requirement further in the NCP; 40 CFR Section 300.430(f)(4)(ii) states:

If a remedial action is selected that results in hazardous substances, pollutants, or contaminants remaining at the site above levels that allow for unlimited use and unrestricted exposure, the lead agency shall review such action no less often than every five years after initiation of the remedial action.

EPA has conducted this five-year review of the selected remedy at the Coakley Landfill Superfund Site (Site) in Greenland and North Hampton, New Hampshire. The review was conducted from December 2010 through September 2011, with assistance from the New Hampshire Department of Environmental Services (NHDES). This report documents the results of the review.

This is the third five-year review for the Site, which is required due to the fact that hazardous substances, pollutants, or contaminants remain at the Site above levels that allow for unlimited use and unrestricted exposure. The triggering action for this statutory review is the date of the second Five-Year Review Report signed on September 21, 2006.

2.0 SITE CHRONOLOGY

Table 1 lists the chronology of events for the Coakley Landfill Superfund Site.

Table 1: Chronology of Site Events

Date	Event
1972	Landfill operations begin
1979	Initial discovery of the problem
1983-1986	Water main extension completed near the site by the towns of North Hampton and Rye Water Districts
July, 1985	Landfill operations cease
June 10, 1986	Final listing on the National Priorities List (NPL)
March 2, 1990	Operable Unit 1(OU-1) Remedial Investigation/Feasibility Study (RI/FS) complete
June 28, 1990	OU-1 Record of Decision (ROD) signature
March 22, 1991	OU-1 Explanation of Significant Differences (ESD) addressing landfill cap design
May 23, 1994	Operable Unit 2 (OU-2) RI/FS complete
September 30, 1994	OU-2 ROD signature
May 17, 1996	OU-1 ESD addressing landfill gas system design
September 24, 1996	OU-1 construction start
September 29, 1999	OU-1 ESD addressing leachate collection and treatment
September 29, 1999	Construction completion
September 25, 2001	First five-year review report

September 21, 2006	Second Five Year Review Report
September 28, 2007	ESD for OU-1 and OU-2 updating ARARs to include revised and additional standards
June 19, 2008	Groundwater Management Zone (GMZ) established and all Institutional Controls (ICs) in place
July 1 st , 2009	ESD for OU-2 clarifying the revision of the Arsenic Maximum Contaminant Level (MCL)
July 29, 2009	Addendum to the Second Five Year Review Report
May 10, 2010	Approval of an updated Project Operations Plan for OU-2

3.0 BACKGROUND

3.1 Physical Characteristics

The Coakley Landfill Superfund Site (Site) includes approximately 92 acres located within the towns of Greenland and North Hampton, Rockingham County, New Hampshire. The actual landfill covers approximately 27 acres. The Site is located about 400 to 800 feet west of Lafayette Road (U.S. Route 1), directly south of Breakfast Hill Road, and about 2.5 miles northeast of the center of the town of North Hampton. The landfill borders farmland, undeveloped woodlands and wetlands to the north and west and commercial and residential properties to the east and south.

3.2 Land and Resource Use

Landfill operations began in 1972, with the southern portion of the Site used for waste disposal from the New Hampshire municipalities of Portsmouth, North Hampton, Newington, and New Castle, along with Pease Air Force Base.

Concurrent with landfill operations, rock quarrying was conducted from approximately 1973 through 1977. Much of the refuse disposed of at the Site was placed in open (some liquid-filled) trenches created by rock quarrying and sand and gravel mining.

In 1982, the city of Portsmouth began operating a refuse-to-energy plant on leased property at Pease Air Force Base. From July 1982 through July 1985, Pease Air Force Base and the municipalities of Rye, North Hampton, Portsmouth, New Castle, Newington and Derry, among others, began transporting their refuse to this plant for incineration. The Site generally accepted incinerator residue from the refuse-to-energy plant after July, 1982. In March 1983, the New Hampshire Bureau of Solid Waste Management ordered the landfill closed to all waste disposal except burnt residue from the incinerator. In July, 1985 the landfill was closed to all disposal

activities.

3.3 History of Contamination

In 1979, the New Hampshire Waste Management Division received a complaint concerning leachate breakouts in the area. A subsequent investigation by the Bureau of Solid Waste Management resulted in the discovery of allegedly empty drums with markings indicative of cyanide waste. A second complaint was received in early 1983 by the New Hampshire Water Supply and Pollution Control Commission regarding the water quality from a domestic drinking water well. *Testing revealed the presence of five different volatile organic compounds (VOCs).*

3.3 Initial Response

A subsequent confirmatory sampling beyond these initial wells detected VOC contamination to the south, southeast, and northeast of the Coakley Landfill. As a result, the town of North Hampton extended public water to Lafayette Terrace in 1983 and to Birch and North Roads in 1986. Prior to this time, commercial and residential water supply in these areas was obtained from private wells.

Also in 1983, the Rye Water District completed a water main extension along Washington Road to the corner of Lafayette Road (U.S. Route 1) and along Dow Lane. This extension brought the public water supply into the area due east and southeast of the intersection of Breakfast Hill Road and U.S. Route 1. See Figure 1-1 (Site Location Plan) for a map showing the aforementioned roads and the dwelling units. In December 1983, the Coakley Landfill was proposed for listing on the NPL, and was listed in 1986.

3.4 Basis for Taking Action

EPA signed a cooperative agreement with the state of New Hampshire on August 12, 1985 to conduct a RI/FS. The RI/FS for OU-1 (Source Control) was completed on March 2, 1990. The RI/FS for OU-2 (Management of Migration) was conducted by the EPA and completed on May 23, 1994. Both studies found contaminants in groundwater beneath the landfill as well as outside the landfill boundaries. VOCs detected at the Site included benzene, ethyl benzene, chloroethane, chlorobenzene and xylene. Semi-volatile organic compounds (SVOCs) detected included predominantly polycyclic aromatic hydrocarbons (PAHs) and dichlorinated benzenes. Inorganic compounds were detected in all groundwater and sediment samples and included arsenic, barium, iron, lead, manganese, nickel, beryllium, selenium and vanadium.

The objectives of the OU-1 ROD were to eliminate threats posed by direct contact with or ingestion of contaminated soils and wastes at the Site, and protect the drinking water aquifer by minimizing further migration of contaminants to the groundwater and surface water. The objective of the OU-2 ROD was to manage the migration of contaminated groundwater outside

the landfill boundaries. Groundwater in this area is classified a drinking water aquifer. Investigations at the Site have identified ingestion of groundwater as the primary threat to human health at this Site. Interim cleanup levels (ICL) for groundwater were established for 16 contaminants of concern (COC):

Table 2: Contaminants of Concern

Contaminant	ICL (ug/l)*	Revised ICL (ug/l)
Benzene	5	
Chlorobenzene	100	
Tetrachloroethene	3.5	
1,2-Dichloropropane	5	
2-Butanone	200	
Diethyl phthalate	2,800	
Trans-1,2-dichloroethene	100	
Phenol	280	
Antimony	6	
Arsenic	50	10** (MCL)
Beryllium	4	
Chromium	50	
Lead	15	
Manganese	180 (health advisory)	300 ** (health advisory)
Nickel	100	
Vanadium	260	
Tetrahydrofuran	154 (NH AGQS)***	

* ICLs from 1990 and 1994 RODs.

** Revised MCL (effective January 23, 2006) and health advisory (as of 2004) was addressed in a 2007 ESD.

*** New Hampshire Ambient Groundwater Quality Standards (NH AGQS) (Env-Or 603.03, Table 600-1). Tetrahydrofuran was added as a COC by the 2007 ESD.

4.0 REMEDIAL ACTIONS

4.1 Remedy Selection

On June 28, 1990, EPA issued a ROD for the source control operable unit (OU-1) of the Site. On March 22, 1991, EPA issued an ESD concerning modifications to the source control remedy related to landfill cap construction and emissions from air strippers proposed to be used to treat the groundwater. A second ESD was issued on May 17, 1996, which changed active landfill gas collection and treatment to a passive collection system. A third ESD was issued on September 29, 1999 which documented the decision to eliminate groundwater collection and treatment. On September 20, 2007, a fourth ESD was issued, revising the MCL for Arsenic from 0.5mg/L to 0.10 mg/L, increasing the EPA Health Advisory for Manganese from 180 ug/L to 300 ug/L, and adding tetrahydrofuran to the list of COCs. Lastly, on July 1, 2009 an ESD was issued, clarifying that the MCL for Arsenic was revised to 0.010 mg/L and re-issuing the 2007 ESD, to reflect the correct MCL.

The remedial action objectives, as stated in the OU-1 ROD, are to:

- Prevent ingestion of groundwater containing contamination in excess of federal and state drinking water standards or criteria, or that poses a threat to public health and the environment.
- Prevent the public from direct contact with contaminated soils, sediments, solid waste and surface water which may present a health risk.
- Eliminate or minimize the migration of contaminants from the soil into groundwater.
- Prevent the off-site migration of contaminants above levels protective of public health and the environment.
- Restore ground and surface water, soils and sediments to levels which are protective of public health and the environment.

The major components of the source control remedy, as modified by the five ESDs are:

- Excavation with disposal of wetlands sediment onto the landfill.
- Consolidate solid waste.
- Cap the landfill.
- Fence the landfill.
- Collect and vent landfill gases.
- Long-term environmental monitoring.
- Institutional controls (ICs) - to prevent contact with Site contaminants and to protect components of the remedy.

The ROD for the management of migration operable unit (OU-2) was issued on September 30, 1994. The ROD called for natural attenuation of the contaminated groundwater, which had migrated from beneath the landfill into off-site areas, together with long-term environmental monitoring and institutional controls. The major components of the management of migration remedy, as modified by the 2007 and 2009 ESDs are:

- ICs to prevent use of contaminated groundwater.
- Natural attenuation for the contaminated groundwater plume.
- Groundwater monitoring.

4.2 Remedy Implementation

4.2.1 Source Control and Management of Migration

A Consent Decree (CD) for the remedial design (RD), construction, operation and maintenance (O&M) of the source control remedy became effective on May 5, 1992. The Coakley Landfill Group (CLG), representing parties potentially responsible for the contamination, completed the design of the OU-1 remedy, and EPA approved the design on January 25, 1996. Construction began September 24, 1996 with the relocation of trash from along the perimeter of the landfill to the top of the landfill. Wetland sediments were removed and placed on the landfill during 1997. The landfill cap was completed in the fall of 1998 and a pre-final inspection was conducted by EPA and NHDES on September 15, 1998 which concluded that no significant construction items remained. Similarly, a pre-final inspection was conducted on October 6, 1998 which determined that wetland construction/restoration activities were complete.

Monitoring of groundwater quality and water levels continued throughout the RD, construction and post-construction phases. EPA evaluated that data and determined that the landfill cap was effective in reducing leachate generation such that the collection and treatment of contaminated groundwater at the edge of the landfill was no longer necessary. EPA's decision was documented in the ESD issued on September 29, 1999.

A CD for the implementation of the management of migration remedy became effective on January 11, 1999. The CLG submitted an environmental monitoring plan for the OU-2 remedy which EPA approved on March 10, 1999. The monitoring plan objective was to 1) assess OU-1 Remedial Action (RA) impacts on site sediment, surface water, groundwater, and 2) monitor natural attenuation of cleanup standard constituents in the OU-2 area, sediments, surface water and groundwater. To attain this objective, the monitoring plan originally required sediment, surface water and groundwater sampling and analysis in April, August and November of each year. The monitoring plan also required analysis for VOCs, SVOCs, metals, natural attenuation indicators and water quality indicators. Annual monitoring of groundwater and surface water

continues today and an annual data assessment report is provided to the EPA and NHDES. However, sediment sampling was subsequently modified to be collected every five years, and ambient air and landfill gas monitoring occurs quarterly after which reports are provided to both agencies.

An updated version of the Project Operations Plan (POP) for the management of migration remedy was conditionally approved on May 10, 2010; it contains an Environmental Monitoring Plan, a Quality Assurance Project Plan, a Health and Safety Plan, and a Methane Monitoring Plan. The Environmental Monitoring Plan's purpose is to monitor the extent of migration of the contaminated groundwater and other potentially affected media (surface water and sediments), and to track the natural attenuation of the groundwater contamination. The plan outlines the methods and procedures that will be used to demonstrate conformance and compliance with ICLs.

Under the POP, wells at OU-1 and OU-2 are monitored annually for field parameters (i.e. static water level, turbidity, specific conductance, temperature, pH, and dissolved oxygen), dissolved metals, total metals, and volatile organic compounds (see figure 2, table 2-2 and table 2-3 in **Appendix G** for further details). Surface water and leachate samples are collected and analyzed annually for field parameters, inorganic parameters, total metals and volatile organic compounds. Sediment samples are collected and analyzed every 5 years for total metals (see table 2-5 in **Appendix G** for further details).

4.2.2 Institutional Controls

A plan for implementation of ICs was submitted to EPA by CLG in June 2000 and the final draft of the Groundwater Use Restriction documents for incorporation into the plan was submitted in June 2001. Both documents were approved by EPA in August 2001. The objectives of the Institutional Control Plan (ICP) are to: 1) provide a plan and schedule to implement institutional controls to restrict ingestion of the degraded groundwater plume that is migrating from the Site in accordance with Section X of the OU-2 ROD, and 2) evaluate the effectiveness of the selected and implemented ICs. The CD defines these ICs as deed restrictions or other declarations of covenants, easements or notices created to restrict the use of groundwater at the Site, limit exposure to waste material, ensure non-interference with the remedy and ensure the integrity and effectiveness of the remedy. More specifically, the statement of work attached to the CD states that with respect to groundwater use, ICs for the Site will include an ICP that creates a GMZ for the landfill and the contaminated groundwater plume.

A GMZ was established via a Groundwater Management Permit (GMP) issued by NHDES on June 19, 2008. Groundwater easements to restrict and/or control the use of groundwater were obtained by the CLG from property owners located within the GMZ that do not have alternate water available. In addition, notifications were recorded with the registry of deeds on all parcels contained within the GMZ which have alternate water available. See **Appendix I** for a copy of

the notice of GMP as filed at the Rockingham County Registry of Deeds, a list of the properties located within the GMZ, and a copy of the GMP issued by NHDES.

Restrictions on the landfill property prohibit any activity, including, but not limited to any construction, or use of the property which would damage the landfill cap, or interfere with the performance, operation or maintenance of remedial actions for OU-1 and OU-2.

4.3 System Operations/Operation and Maintenance (O&M)

Required system operations in the OU-1 Operation and Maintenance Plan (OMP) include: annual mowing and inspection of the landfill cap and surface water drainage systems, and quarterly ambient air and landfill gas monitoring. Annual sampling and monitoring of groundwater and surface water is required for both OUs. Sediment sampling is performed every five years. Since ICs are in place, annual monitoring of the effectiveness of ICs is also required.

Table 3: Annual Operating and Maintenance Expenses by Operable Unit

Year	Operable Unit 1	Operable Unit 2
2010	\$ 46,292.97	\$ 40,447.39
2009	\$ 47,048.95	\$ 45,841.22
2008	\$ 45,311.65	\$ 71,175.57
2007	\$ 33,967.79	\$ 63,881.71

5.0 PROGRESS SINCE THE LAST FIVE-YEAR REVIEW

5.1 Protectiveness Statement from the Previous Five-Year Review

The protectiveness statements from the entire site, taken from the Second Five Year Review read as follows:

A protectiveness determination of the source control remedy at OU-1 cannot be made at this time until further information is obtained. Metals exceedances are present above ecological benchmarks in the surface water, leachate and sediment at the Site. Additional monitoring data has been collected and will be analyzed to determine if adverse ecological impacts are present in these media. It is expected that the data analysis will take approximately 15 months to complete, at which time a protectiveness determination will be made. In addition, sporadic violation of off-site methane gas levels must be brought into compliance with state regulations. All human health threats at the Site have been addressed through stabilization and capping of the landfill and the landfill cap is functioning as intended. Installation of fencing and warning signs and deed restrictions are preventing human exposures at the capped landfill.

A protectiveness determination of the management of migration remedy at OU-2 cannot be made at this time until further information is obtained. High levels of arsenic and manganese are present in wells at the edge of the proposed groundwater management zone. Additional data must be collected so that a determination can be made whether elevated levels are a result of landfill impacts or from a source other than the NPL Site. Dependent on these findings, the scope of the groundwater remedy may need to be modified. A protectiveness determination will be made in 15 months when all data has been evaluated. The extent of the GMZ needs to be determined and institutional controls established for all properties within the GMZ. Monitoring of the Site will continue until cleanup levels for the contaminants of concern are met. It is expected to take approximately 15 years to reach cleanup levels.

A site-wide protectiveness determination for the Coakley Superfund Site cannot be made at this time until further information is obtained. Metals exceedances are present above ecological benchmarks in the surface water, leachate and sediment at the Site and high levels of arsenic and manganese are present in wells at the edge of the proposed groundwater management zone. Additional data has been and/or will be collected and analyzed and a protectiveness determination will be made in 15 months.

Subsequently, on July 29, 2009 and Addendum to the Second Five Year Review was approved and modified these statements to read:

The remedy at Operable Unit 1 is protective of human health and the environment. However, the landfill gas monitoring program will remain in place, as will a reduced surface water and sediment monitoring effort to ensure that the currently non-toxic concentrations are not increasing significantly. Groundwater monitoring to determine compliance with the revised groundwater monitoring standards for the landfill will be conducted as a component of OU-2. A plan for future monitoring will be developed by the agencies and CLG as appropriate for the next five year review.

The remedy at Operable Unit 2 is protective of human health and the environment in the short-term. Long-term protectiveness will be achieved when interim groundwater cleanup levels for all contaminants

of concern are met.

The remedy at the Coakley Landfill Superfund Site is protective of human health and the environment in the short-term. Long-term protectiveness has been achieved already in OU-1 based on the maintenance of the landfill cap, long-term monitoring, and use restrictions. Long-term protectiveness will be achieved in OU-2 when interim groundwater cleanup levels for all contaminants of concern are met and restrictions on the use of groundwater within OU-2 can be removed.

5.2 Progress Since the Last Five-Year Review

The recommendations of the 2006 review, as modified by the 2009 Addendum, are stated as follows:

- Prepare an ESD (to reflect the changes in the Arsenic MCL and Manganese Health Advisory).
- Affirm boundary of GMZ and if it needs to be expanded, establish ICs at additional properties.
- Obtain GMP approval from NHDES.
- Obtain easements for three properties which currently require ICs, and others, if GMZ is expanded.
- Install active measures to control methane gas exceedances in compliance with state regulations
- Follow up sampling and discussion with EPA and NHDES to determine whether the sediment, surface water and leachate pose an ecological risk and, if so, how it should be addressed.
- Continue methane gas monitoring program.
- Perform chemistry testing to ensure that the currently non-toxic concentrations (at sediment, surface water, and leachate samples) do not show an upward trend.

5.3 Status of Recommendations Since the Last Five-Year Review

Table 4: Status of Recommendations since Last Five-Year Review

Issues from Previous Review	Action Taken and Outcome
Arsenic MCL has been lowered to 10 ug/l from current site ICL of 50 ug/l and health advisory for manganese has changed from 180 ug/l to 300 ug/l.	An ESD documenting the changes in the arsenic MCL and the manganese health advisory was written and finalized on September 30, 2007. Subsequently, on July 1, 2009 another ESD corrected an error in the reported numeric value of the revised arsenic MCL.
Boundary of proposed GMZ needs to be affirmed.	The CLG defined a clean edge for the plume and provided all the necessary information to apply for a GMP in 2008.
GMP must be obtained.	On June 19, 2008, NHDES approved the GMP application submitted by the CLG.
All Institutional Controls must be in place.	ICs at the remaining properties were implemented at the time of the GMP approval, establishing a GMZ, on June 19, 2008. Deed notices were placed on all affected properties within the GMZ and the notices were recorded at the Rockingham County Registry of Deeds in June 2008. The CLG is required to annually notify residents at all affected properties. Annual monitoring at the Site will continue until the interim groundwater cleanup levels for all contaminants of concern, as required under the OU-2 ROD are met.
Off-site methane gas levels must be brought into compliance with state regulations.	The Coakley Landfill Group (CLG) installed methane gas alarms in buildings on abutting properties in 2007 and no violations have been reported on those properties since that time. From September 21, 2006 to the present, no methane has been detected above the state standard for methane soil gas (2.5%) at three of the six gas monitoring probes (M-2, M-4, and M-5). For the other three monitoring probes (M-1, M-6, and M-7), sporadic violations have been observed ranging from single detections of 2.6% at M-1 on September 24, 2007, and 4.2% at M-7 on September 30, 2008, to several detections at M-6 (8.1% on September 30, 2008, 4.5% on September 18, 2009, 8.0% on June 30, 2010, and lastly, 3.4% on March 30, 2011). The agencies will continue to require CLG to perform quarterly landfill gas monitoring of landfill gas probes M-4, M-5, M-6 and M-7 and allow scaled back landfill gas monitoring at M-1 and M-2 to twice a year based on historical data and lack of any nearby structures.
Leachate, surface water and sediment metal exceedances must be addressed.	In 2008 and 2009 additional sediment and surface water samples, respectively, were collected and toxicity tests were run, which showed no significant ecological impact. Since the sampled area was selected as the "worst case area" based on chemistry testing, EPA concluded that it is likely there are no significant ecological impacts in surface water and sediment at the Site. This was documented in July 29, 2009 as an Addendum to the Second 5 Year Review.
Methane Gas	CLG has continued the methane gas monitoring program as described above, under the oversight of EPA and NHDES.

Coakley Landfill
Third Five-Year Review

Issues from Previous Review	Action Taken and Outcome
Sediment, Surface Water and Leachate Sampling Plan	CLG performed annual chemistry testing of these samples and in 2010 it performed a statistical analysis of all historical data to ensure that the currently non-toxic concentrations do not show an upward trend.

6.0 THE FIVE-YEAR REVIEW PROCESS

6.1 Administrative Components

The Coakley Landfill Superfund Site five-year review was conducted by Gerardo Millán-Ramos, the EPA Remedial Project Manager, with assistance from the following review team members:

Joseph Donovan	NHDES Remedial Project Manager
Lloyd Selbst, Esq.	U.S.EPA Attorney
Cynthia Catri	U.S. EPA Attorney
Rudy Brown	U.S. EPA Community Involvement Coordinator
Richard Sugatt	U.S. EPA Risk Assessor
Stephen Mangion	U.S. EPA Hydro-geologist
Charles Porfert	U.S. EPA QA/QC Chemist

The five-year review was conducted between December 2010 and September 2011.

6.2 Community Notification and Involvement

Community notification was initiated by the release of a fact sheet announcing the start of the five-year review. Rudy Brown, EPA Community Involvement Coordinator issued the fact sheet on Friday January 21, 2011. The notification was published in the "Portsmouth Herald" and the "Hampton Union" newspapers. A copy of each notice as published in the newspapers is shown in Appendix N.

Another fact sheet and notification to the newspapers will be issued announcing the completion of the report and the results of the review. A copy of the final report will be available for review at the North Hampton Public Library, 235 Atlantic Avenue, North Hampton, NH; at the EPA Region I office, 5 Post Office Square, Boston, MA; and at <http://www.epa.gov/region1/superfund/sites/coakley>.

6.3 Document Review

The project team reviewed several documents and files to understand the history and status of the cleanup in order to assess the protectiveness of the remedy at the Site. Specific documents reviewed included:

1. Records of Decision: June 28, 1990 and September 30, 1994
2. Consent Decrees: May 4, 1992 and October 29, 1998
3. Explanation of Significant Differences: March 22, 1991; May 17, 1996; September 29, 1999; September 28, 2007; July 1, 2009
4. Initial Data Analysis and Monitoring Report: September 1999
5. Final Institutional Control Plan: June 2000
6. Initial Five-Year Review Report: September 25, 2001
7. Second Five-Year Review Report: September 21, 2006
8. Addendum to the Second Five-Year Review Report: July 29, 2009
9. Project Operations Plan: May 10, 2010
10. Annual Monitoring Reports: 2000-2010
11. Methane Soil Gas Survey Work Plan: January 2006
12. Landfill Gas Monitoring Results: 2006-2010

6.4 Data Review

6.4.1 Groundwater Monitoring

Sixteen (16) groundwater contaminants of concern were identified and ICLs were established in the OU-2 ROD. A seventeenth (17) groundwater COC (tetrahydrofuran) was added in September 2007 via an ESD. See Table 2 in Section 3 herein for more details. Thirty-six compliance wells were sampled in the latest groundwater sampling round for which data are available (August, 2010) and Mann-Kendall data evaluations were performed to evaluate trends for arsenic at 19 wells, for manganese at 19 wells, and for benzene at 5 wells, with data from the most recent 16 sampling events. The trend analysis was performed for these three contaminants because they have historically been the most prevalent at the edge of the GMZ.

For arsenic, decreasing trends were observed for 10 wells, increasing trends were observed for 6 wells, and no trend was observed for 3 wells. For manganese, decreasing trends were observed for 13 wells, increasing trends were observed for 4 wells, and no trend was observed for 2 wells. For benzene, decreasing trends were observed for all 5 wells. Overall, contaminant concentrations in groundwater at the Site show a decreasing trend. Data sheets for the Mann-Kendall evaluation are included in **Appendix C**. A summary of results by wells and compounds is also included.

While there appears to be a general downward trending site-wide of contaminant concentrations, many COCs within the GMZ continue to exceed state and federal cleanup standards. In addition, manganese exceedances were found in two wells outside the GMZ. During the past six years, nine chemicals of concern, in decreasing order of prevalence (i.e. number of detections above ICLs) did not meet their specified cleanup levels: manganese, arsenic, benzene, lead, chromium, nickel, beryllium, antimony and vanadium. Also, concentrations for tetrahydrofuran and most

recently (starting with sampling in 2008 at the request of NHDES) 1,4-Dioxane exceeded the NH AGQS.

After reviewing the data from the past six annual monitoring reports, twenty-eight wells exceeded the manganese cleanup level (health advisory of 300 ug/l) with concentrations ranging from 310 ug/l to 13,000 ug/l. Twenty-one wells exceeded the arsenic cleanup level (MCL of 10 ug/l) with concentrations ranging from 11 ug/l to 280 ug/l; three wells exceeded the benzene cleanup level (MCL of 5 ug/l) with concentrations ranging from 6 to 8 ug/l; two wells exceeded the nickel cleanup level (MCL of 100 ug/l) with concentrations ranging from 130 to 410 ug/l; one well exceeded the chromium cleanup level (50 ug/l) with concentrations ranging from 140 ug/l to 600 ug/l; one well exceeded the lead cleanup level (15 ug/l) with concentrations ranging from 23 to 100 ug/l; two wells exceeded the beryllium cleanup level (4 ug/L) with concentrations ranging from 23 to 85 ug/L; one well exceeded the antimony cleanup level (6 ug/L) at 8 ug/L; and one well exceeded the vanadium cleanup level (260 ug/L) at 350 ug/L. The NH AGQS for tetrahydrofuran (154 ug/L) was exceeded at one well with concentrations at 160 and 180 ug/L.

The NH AGQS for 1,4-Dioxane (3 ug/L), which is not an ICL, was exceeded at ten wells (all of them located within the established GMZ) with concentrations ranging from 6 to 310 ug/L. All the wells showing exceedances of the ICLs, are located within the established GMZ, except wells GZ-123, and FPC-2A, which are outside the GMZ, south of the landfill. These two wells show exceedances of the manganese ICL (300 ug/L) that range from 2,200 to 3,300 ug/L, and from 500 to 730 ug/L, respectively. See figure 2 (site plan) on Appendix B for the location of these two wells and the GMZ boundary.

While VOCs are still detected above cleanup levels within the GMZ, VOCs have not been detected in either of the off-site residential water supply wells at concentrations that exceeded the laboratory detection limits of 0.5 ug/l, except for one sample collected from well R-3 on January 24, 2008 which detected Methyl tert-butyl ether (MTBE) at 1.6 ug/L (below the New Hampshire GW-1 standard of 13 ug/L). The analytical results for samples collected from off-site residential water supply wells do not indicate any impacts from the landfill Site.

The potential for vapor intrusion was evaluated following the 2002 EPA Draft Guidance for Evaluating the Vapor Intrusion to Indoor Air Pathway from Groundwater and Soils. A risk evaluation of the worst case scenario (a building directly above the location with the highest benzene concentration) revealed that the potential risk would be within EPA's acceptable risk range of 1E-04 to 1E-06. Also, according to the most current concentration contours and the known direction of groundwater flow, no structures exist within a 100 feet from the presumed extent of the plume, nor is the plume expanding in the direction of any structures or non-wetland areas where future construction is a possibility. Please see figures 3 and 4 in **Appendix B** for maps showing overburden and bedrock groundwater flow, and **Appendix K** for a memo detailing the evaluation performed.

The lateral distributions of arsenic, manganese, and 1,4-Dioxane in overburden and bedrock wells, and graphs illustrating contaminant concentrations over time for arsenic, manganese, and benzene in selected wells, are included in **Appendix C**.

6.4.2 Landfill Gas Monitoring

Based on data generated during extensive pre-design studies and other new information developed after the OU-1 ROD was issued in June 1990, the landfill gas management component of the selected remedy was modified from an active interior gas collection system and on-site thermal destruction to a passive gas collection and venting system. This new data indicated that rates of gas generation and levels of hazardous substances in the landfill gas would be lower than those assumed and used for the preparation of the OU-1 ROD. Therefore, after consultation with NHDES, EPA concluded that a passive landfill gas collection and venting system would prevent off-site, sub-surface migration of landfill gases and be protective of human health and the environment, while saving significant costs. This change was documented by an Explanation of Significant Differences (ESD) issued on May 17, 1996. As a result, “turbine vents” were installed on several landfill gas vent pipes in order to prevent the off-site migration of landfill gas.

At the time of the Second Five Year Review, sporadic violations of off-site methane gas levels needed to be brought into compliance with state regulations (Env-Hw 702.09 and 702.11). In 2007, the Coakley Landfill Group (CLG) installed methane gas alarms in buildings on six abutting properties along the eastern edge of the landfill, and discontinued the quarterly monitoring of landfill gas at these locations. The methane gas alarms are still in place in order to alert the occupants of any unsafe gas conditions on the premises, should those occur. Subsequently, NHDES and EPA required the CLG to continue quarterly monitoring of landfill gas probes M-4, M-5, M-6 and M-7 and allowed scaled back landfill gas monitoring at M-1 and M-2 to twice a year based on historical data and lack of any nearby structures.

From September 21, 2006 to the present, no methane has been detected above the state standard for methane soil gas (2.5%) at three of the six gas monitoring probes (M-2, M-4, and M-5). For the other three monitoring probes (M-1, M-6, and M-7), sporadic violations have been observed ranging from single detections of 2.6% at M-1 on September 24, 2007, and 4.2% at M-7 on September 30, 2008, to several detections at M-6 (8.1% on September 30, 2008, 4.5% on September 18, 2009, 8.0% on June 30, 2010, and lastly, 3.4% on March 30, 2011. No indication of methane in the six nearby occupied buildings being monitored has been found to date.

Given the sporadic nature of these excursions (six excursions out of a total of ninety two readings (6.5%) taken during the last five years), and the lack of methane detections in the occupied buildings, EPA and NHDES have recommended the CLG to continue with the quarterly monitoring of landfill gas for probes M-4, M-5, M-6 and M-7, and bi-annual

monitoring for probes M-1 and M-2. **Appendix C** contains a figure showing the location of the landfill gas monitoring probes, and graphs of the concentrations observed at all probes since the start of the monitoring program in 1999.

6.4.3 Surface Water/Sediment Monitoring

Comparison of the first five years of monitoring results (2001-2005) with ecological benchmarks for freshwater organisms revealed exceedances by some metals in landfill leachate, surface water and sediment. The CLG performed an additional round of sampling in August, 2006 which revealed additional exceedances. As a result, EPA in consultation with NHDES evaluated the data and determined that the concentrations had the potential for significant ecological impact. Thus, EPA requested that additional sediment and surface water samples be collected in 2008 and 2009 and ran for various toxicity tests. EPA concluded that these results showed no significant ecological impact. Since the sampled area was selected as the “worst case area” based on frequency and magnitude of benchmark exceedances, EPA concluded that it is likely there are no significant ecological impacts in surface water and sediment at the Site. This was documented in July 29, 2009 as an Addendum to the Second 5 Year Review Report.

In accordance with the Environmental Monitoring Plan (EMP) dated April 2010, sediment sampling was reduced to once every 5 years, with the next sediment sampling to be performed in 2014. Therefore, sediment sampling was not performed in August 2010. Surface water and leachate sampling continue on a yearly basis, however surface water sample locations SW-4, SW-5, and SW-103 were dry in August 2010, thus surface water samples could not be collected at these locations. The leachate and surface water sample locations are indicated on figure 2 at **Appendix B**.

The EPA risk assessor evaluated the historical data for the sediment samples and developed an approach for evaluating the potential toxicity of sediments at the Site during five year review periods. The approach basically requires that the worst case sediment location (SED-05) be sampled and analyzed for inorganics every five years. It uses a benchmark quotient approach to identify conditions that might result in toxicity. Please see **Appendix J** for a detailed explanation of this approach.

6.4.4 Institutional Controls

Restrictions on the landfill property prohibit any activity, including, but not limited to any construction, or use of the property which would damage the landfill cap, or interfere with the performance, operation or maintenance of remedial actions for OU-1 and OU-2.

EPA endorses the State Comprehensive Ground Water Protection Program embodied in RSA 485C. New Hampshire law requires that all groundwater must meet drinking water quality standards. The exception is for areas contained within a GMZ where a GMP has been issued. A

GMP establishes an area within which New Hampshire acknowledges that groundwater is contaminated above drinking water quality standards and includes monitoring criteria that will ensure the long-term protection of public health and the environment. The goal in establishing a GMZ is to bring groundwater back to drinking water quality standards.

There are two categories of ICs under the NHDES GMP regulations: 1) deed notices and 2) easements. Deed notices are required for properties within the GMZ with access to public water supplies; permission of the landowner is not required to record a deed notice. Easements are required on properties within the GMZ where no alternative water supply exists and are designed to restrict and/or control the use of groundwater. Easements are obtained by the permittee from property owners within the GMZ.

A GMP was issued by NH DES for the Coakley Landfill on June 19, 2008 with an expiration date of June 18, 2013. It established a GMZ consisting of 23 properties with a recorded deed notice and 11 properties with recorded easements. Six of the 34 properties have recorded groundwater restrictions. Permission was obtained for all properties within the GMZ, and the GMZ boundaries were affirmed. (See the GMZ boundary plan on figure 2 at **Appendix B**).

The implementation of the current ICs is monitored at least on an annual basis at the time of the sampling events. The contractor retained by the CLG is required to observe any developments within the GMZ property lots they enter and notify the CLG of any such findings. In addition every year, the CLG sends letters to all the property owners of the GMZ lots, requesting that they notify the CLG technical committee of any new drinking water supply wells within their property. See **Appendix H** for a sample letter.

Item 2.e of the OU-2 Statement of Work (SOW) requires EPA to review and approve an ICP that among other things requires *...a program and schedule for follow-up to evaluate the effectiveness of the ICs and to implement other types of ICs if not effective, and to evaluate if additional properties require ICs because of the contaminated groundwater plume migrating from the Coakley Landfill beyond the areas in which ICs have been implemented and to implement ICs on such additional properties.* An ICP was approved by EPA in August 2001, however, many changes were made at the time the GMZ was being discussed and implemented, and have not been formally documented. Thus an updated version of the Institutional Control Plan is necessary.

6.5 Site Inspection

The third five-year review's site inspection to assess the protectiveness of the remedy was conducted on April 27, 2011. The inspection was conducted by Gerardo Millán-Ramos, EPA Remedial Project Manager, and Stephen Mangion, EPA hydro-geologist. Peter Britz, CLG Landfill Project Coordinator, and Mr. Robert P. Sullivan, CLG Executive Committee Chairman were present at the time of the inspection. During the inspection, the integrity of the landfill cap

and surface drainage system was evaluated. The condition of the landfill gas venting and monitoring system, groundwater monitoring wells and the perimeter fence were also observed. Warning signs were posted, however extensive damage to the fence was observed and some of the monitoring wells were found unlocked. Observations and recommendations were made on-site at the time of the inspection; most notable was the presence of construction equipment and materials extremely close to the southwestern corner of the fence. On May 24, 2011 EPA sent letters to the owners of the properties where these materials and equipment were observed, requiring them to coordinate their relocation with the CLG and EPA. See **Appendix E** for photos documenting Site conditions and **Appendix F** for the inspection checklist.

6.6 Interviews

Gerardo Millán-Ramos interviewed the CLG Landfill Project Coordinator, the NHDES Project Manager, and an adjacent business owner. During the interview with the adjacent business owner, he indicated his interest in using groundwater for irrigation purposes. EPA cautioned him against such use given the potential for that action to change the groundwater flow in the area. Altering the groundwater flow could likely cause complications by expanding the extent of the groundwater contamination and increasing costs. There are currently no recorded groundwater use restrictions on his property. Further evaluation is necessary to determine whether additional groundwater restrictions on properties east of the landfill are necessary.

Both the CLG Landfill Project Coordinator and the NHDES project manager raised concerns about the presence of 1,4-Dioxane within the GMZ. A report of those interviews can be found in **Appendix D**.

7.0 TECHNICAL ASSESSMENT

7.1 Question A: Is the remedy functioning as intended by the decision documents?

Yes. A review of all available documents, applicable or relevant and appropriate requirements (ARARs), risk assumptions and the results of the Site inspections indicates that the remedy is functioning as intended. Even though the concentration of some metals and VOCs in leachate, sediment, and surface water samples exceeded the NH standards during the past five years, toxicity tests using the worst case scenario have demonstrated these concentrations pose no significant risk to the ecosystem. Sporadic exceedances to the NH landfill gas standard for methane have been observed at some of the landfill gas monitoring probes, however, no methane has been detected by the methane alarms installed at any of the residential and commercial buildings being monitored. Although a number of wells have shown elevated levels of metals, tetrahydrofuran and most recently, 1,4-Dioxane, the vast majority of these wells are within the established GMZ. The exceptions are two wells: FPC-2A/B, and GZ-123 which showed levels of manganese exceeding the 300 ppb health advisory, but not exceeding the NH AGQS for

manganese of 840 ppb. In addition, public water is provided to all potential drinking water users in the immediate area of the landfill, thus no one is exposed to the groundwater. While natural attenuation processes are occurring at the Site, additional analysis is required to determine whether the current GMZ needs to be expanded and ICs need to be established on additional properties. Because COCs within, and potentially beyond the GMZ, still exceed state and federal cleanup levels, and are expected to remain above these levels for the foreseeable future, the GMP, currently set to expire on June 18, 2013, must be renewed, prior to that date. Finally, changes to the ICP were made at the time the GMZ was being discussed and implemented and these changes need to be incorporated into the Final ICP.

7.2 Question B: Are the exposure assumptions, toxicity data, cleanup levels, and remedial action objectives used at the time of the remedy selection still valid?

Yes. There have been no changes in land use at and surrounding the Site which would change the exposure assumptions contained in the RODs or affect the protectiveness of the remedy. No new sources or exposure pathways were identified during this five-year review. A new COC (tetrahydrofuran) was identified. This was documented in the July 1, 1999 ESD for OU-1.

Several annual monitoring reports have indicated four wells (MW-8, GZ-105, AE-2A, and AE-2B) contaminated with tetrahydrofuran in concentrations which exceed the NH AGQS of 154 (ug/l). Presently, there are no federal drinking water standards for tetrahydrofuran. Nonetheless, these detections do not require a change in the selected remedy, nor do they impact the overall protectiveness of the remedy, as they have all occurred in monitoring wells located within the GMZ, and no one is exposed to the groundwater.

There have been no changes in toxicity factors that would affect the risk calculated for the Site, or significant enough to require a change in the selected remedy. An Addendum to the Second Five Year Review Report was finalized on July 29, 2009, documenting that there is no significant ecological risk associated with surface water and sediment at the Site. Two ESDs were finalized on September 28, 2007, and July 1, 2009, to include revised and additional standards (i.e. a more stringent MCL for arsenic from 50 ug/L to 10 ug/L, and a less stringent health advisory for manganese from 180 ug/l to 300 ug/l). These changes will not affect the risk calculated at the Site; however, the revised manganese cleanup level for groundwater may require a revision to the size of the existing GMZ.

A Project Operations Plan (POP) is currently in place which requires annual groundwater, leachate, and surface water monitoring. Additionally, sediment monitoring is required every five years. A landfill gas (LFG) monitoring plan is also in place which requires quarterly monitoring at several locations. These monitoring events continue to provide the necessary data to ensure that the cleanup levels and remedial action objectives (RAOs) are still valid at the Site. The updated POP was established on May 10, 2010, and contains an Environmental Monitoring Plan (EMP), a Quality Assurance Project Plan (QAPP), a Health and Safety Plan, and a Methane

Monitoring Plan. The EMP describes how the extent of migration of the contaminated groundwater and other potentially affected media (surface water and sediments) will be monitored, and how the natural attenuation of the contamination will be tracked. It outlines the methods and procedures that will be used to demonstrate conformance and compliance with ICLs.

All chemical-specific Applicable or Relevant and Appropriate Requirements (ARARs) and To Be Considered (TBCs) criteria were reviewed for changes that could affect protectiveness and no changes were found. See **Appendix L** for a complete list including legal references, a synopsis of the requirements and the actions to be taken. Data provided and analyzed indicate no change in Site conditions which would warrant a re-evaluation of risk, except for additional data collection and analysis that is required to determine whether the current GMZ adequately includes the entire area of groundwater contamination attributable to the Site.

7.3 Question C: Has any other information come to light that could call into question the protectiveness of the remedy?

Yes. Although no newly identified human health risks have been identified to date, the implementation of recent (2008) changes in the NHDES sampling requirements for this Site (See **Appendix M** for a copy of the NHDES letter describing the changes) have revealed the presence of 1,4-Dioxane at most wells in the periphery of OU-1, several wells within OU-2, and in sediment samples. The concentrations of 1,4-Dioxane detected above the NHDES AGQS (3 ug/L) in the monitoring wells ranges from 6 to 310 ug/L, and in the sediment samples from 20 to 26 ug/L. The CLG has recommended that the extent of the impact and the temporal trends be evaluated by monitoring 5 additional wells (MW-6, FPC-5A, FPC-7A, AE-1A, and AE-1B) added to the 15 wells currently sampled for 1,4-dioxane (MW-4, MW-5S, MW-5D, MW-8, MW-9, MW-11, BP-4, OP-2, OP-5, FPC-8A, FPC-8B, AE-2A, AE-2B, AE-3A, and AE-3B). EPA and NHDES have agreed in principle with this recommendation and will be further evaluating this recommendation plus the appropriateness of additional measures, to determine whether the area of the existing GMZ needs to be revised. An ICL has not been established for 1,4-Dioxane at this site; however, a decision document will be issued to add 1,4-Dioxane to the site COCs and to establish an ICL.

Two of the property owners adjacent to the east side of the landfill expressed interest in using an existing well in their property for irrigation purposes. EPA, NHDES, and the CLG met with these two property owners to dissuade them from such idea. While preparing for this meeting it became evident that their lot and many others at this area (east of the landfill) do not have recorded groundwater use restrictions in place. Groundwater extraction in this area has the potential to alter the flow of groundwater and increase the extent of the plume, thus adding complexities and time to the ongoing remedy. Thus the possibility of instituting such restrictions via a City ordinance will be explored.

No other information has come to light which could affect the protectiveness of the remedy.

7.4 Technical Assessment Summary

According to the data reviewed, the Site inspections and interviews conducted, the remedy is functioning as intended by the existing RODs and ESDs, except additional information and analysis is required to better determine the extent of the groundwater contamination and whether an adjustment of the GMZ boundaries is necessary. Institutional controls have been implemented to restrict use of the landfill-impacted groundwater surrounding the Site. Continued monitoring is required to ensure that methane emissions are compliant, that the boundaries of the GMZ are adequate and that potential surface water-sediment exposures do not pose unacceptable risks in the future.

8.0 ISSUES

The following issues were identified as a result of the Five-Year Review:

Table 5: Issues

ISSUES	Affects Current Protectiveness (Y/N)	Affects Future Protectiveness (Y/N)
Even though no one within the Groundwater Management Zone (GMZ) and its immediate vicinity is exposed to the groundwater, 1,4-Dioxane has been detected at levels exceeding the New Hampshire Ambient Groundwater Quality Standards (NHAGQS) at most monitoring wells within OU-1 and several within OU-2. Additionally, manganese has been detected outside the current GMZ (wells GZ-123 and FPC-2A/B outside the southern edge of the GMZ) above the EPA Health Advisory, and both manganese and arsenic concentrations in the FPC-6 well cluster (inside the eastern edge of the GMZ) suggest that concentrations may exceed the Interim Compliance Levels (ICLs) beyond the GMZ boundary.	N	Y
Damage to the fence must be repaired; unlocked monitoring wells and gates must be locked and properly labeled; excessive vegetation in some swales and near the fence must be removed; also construction equipment and materials that are too close to the fence and monitoring wells, must be relocated.	N	Y

Coakley Landfill
Third Five-Year Review

There is a possible need for groundwater extraction restrictions for properties on the eastern side of the landfill. Groundwater extraction in this area has the potential to alter the flow of groundwater and increase the extent of the plume, thus adding complexities and time to the ongoing remedy.	N	Y
Changes to the Institutional Control Plan were made at the time the GMZ was being discussed and implemented. However, these changes have not been incorporated into the Final Institutional Control Plan that was approved by EPA.	N	Y
Groundwater Management Permit will expire on June 18, 2013. Site contaminants within the GMZ continue to exceed state and federal cleanup levels. Exceedences outside GMZ suggest that concentrations may also exceed ICLs beyond the GMZ boundary.	N	Y

9.0 RECOMMENDATIONS AND FOLLOW-UP ACTIONS

The following recommendations have been made based on the data review for the Site.

Table 6: Recommendations and Follow-up Actions

Issue	Recommendations and Follow-up Actions	Party Responsible	Oversight Agency	Milestone Date	Affects Protectiveness (Y/N)	
					Current	Future
Even though no one within the Groundwater Management Zone (GMZ) and its immediate vicinity is exposed to the groundwater, 1,4-Dioxane has been detected at levels exceeding the New Hampshire Ambient Groundwater Quality Standards (NHAGQS) at most monitoring wells within OU-1 and several within OU-2. Additionally, manganese has been detected outside the current GMZ (wells GZ-123 and FPC-2A/B outside the southern edge of the GMZ) above the EPA Health Advisory, and both manganese and arsenic concentrations in the FPC-6 well cluster (inside the eastern edge of the GMZ) suggest that concentrations may exceed the Interim Compliance Levels (ICLs) beyond the GMZ boundary.	a) Sample monitoring wells at the outermost edge of the GMZ and the two residential wells for 1,4-Dioxane for the next two rounds.	CLG	EPA and NHDES	August 2013	N	Y
	b) Perform additional analysis to determine whether the site contaminants are moving beyond the edge of the GMZ and whether the current GMZ needs to be expanded and Institutional Controls (ICs) need to be established on additional properties and evaluate the need for further response action.	CLG	EPA and NHDES	August 2013	N	Y
	c) Prepare an Explanation of Significant Differences (ESD) to add 1,4-Dioxane as a COC with an ICL.	EPA	EPA and NHDES	August 2013	N	Y

Coakley Landfill
Third Five-Year Review

Issue	Recommendations and Follow-up Actions	Party Responsible	Oversight Agency	Milestone Date	Affects Protectiveness (Y/N)	
					Current	Future
Damage to the fence must be repaired; unlocked monitoring wells and gates must be locked and properly labeled; excessive vegetation in some swales and near the fence must be removed; also construction equipment and materials that are too close to the fence and monitoring wells, must be relocated.	Perform the necessary repairs to the fence, and lock / properly label all monitoring wells that were lacking these features at the time of the inspection. Also remove excessive vegetation and relocate the construction equipment and materials to a safe distance from the fence. Coordinate and document this activity with the regulatory agencies and the CLG.	CLG, Town of North Hampton, abutting property owner	EPA and NHDES	November 2011	N	Y
There is a possible need for groundwater extraction restrictions for properties on the eastern side of the landfill. Groundwater extraction in this area has the potential to alter the flow of groundwater and increase the extent of the plume, thus adding complexities and time to the ongoing remedy.	Evaluate the need for further ICs in the area east of the landfill to prevent altering of groundwater flow as a means of containing the contaminated groundwater plume.	CLG	EPA & NHDES	September 2013	N	Y
Changes to the Institutional Control Plan were made at the time the GMZ was being discussed and implemented. However, these changes have not been incorporated into the Final Institutional Control Plan that was approved by EPA.	Update the Final Institutional Control Plan to incorporate changes that were made to the follow-up requirements for ICs.	CLG	EPA & NHDES	March 2012	N	Y

Issue	Recommendations and Follow-up Actions	Party Responsible	Oversight Agency	Milestone Date	Affects Protectiveness (Y/N)	
					Current	Future
Groundwater Management Permit will expire on June 18, 2013. Site contaminants within the GMZ continue to exceed state and federal cleanup levels. Exceedences outside GMZ suggest that concentrations may also exceed ICLs beyond the GMZ boundary.	Renew GMP for GMZ and potentially expand boundary if additional tests show site contaminants migrating beyond the current GMZ boundary.	CLG	EPA & NHDES	June 2013	N	Y

10.0 PROTECTIVENESS STATEMENTS

OU-1

The remedy at OU-1 currently protects human health and the environment, both in the short and long term. Also, the landfill gas monitoring program will remain in place. All human health threats at the Site have been addressed through stabilization and capping of the landfill and the landfill cap is functioning as intended. Installation of fencing and warning signs and deed restrictions are preventing human exposures at the capped landfill. Toxicity tests that were

applied to a “worst case scenario” in the sediment samples, revealed no significant ecological impact, and EPA concluded that it is likely there are no significant ecological impacts in surface water and sediment at the Site. In order to ensure that the currently non-toxic concentrations are not increasing significantly, a reduced surface water and sediment monitoring effort will remain in place. Also, the landfill gas monitoring program will remain in place.

OU-2

The remedy at OU-2 currently protects human health and the environment in the short-term because on-site residents are not exposed to the groundwater, as water utility service has been provided, and there is no evidence of such exposure for off-site residents. Also, a GMZ has been established via a NHDES GMP, and ICs have been established for all properties within the GMZ. Groundwater monitoring to determine compliance with the groundwater monitoring standards for the landfill will continue to be conducted as a component of OU-2. Long-term protectiveness will be achieved when interim groundwater cleanup levels for all contaminants of

Coakley Landfill
Third Five-Year Review
concern are met.

Site-Wide

Overall, the remedy at the Coakley Landfill Superfund Site currently protects human health and the environment in the short-term. Long-term protectiveness has been achieved already in OU-1 based on the maintenance of the landfill cap, long-term monitoring, and use restrictions. Long-term protectiveness will be achieved in OU-2 when interim groundwater cleanup levels for all contaminants of concern are met and restrictions on the use of groundwater within OU-2 can be removed. Monitoring of the Site will continue until cleanup levels for the contaminants of concern are met.

11.0 NEXT REVIEW

The next statutory five-year review for the Coakley Landfill Superfund Site will be issued either on or prior to September 21, 2016, five years from the date of signature of this review.

The graph displays the concentration of Manganese in ppb over a period of approximately 14 years. The x-axis represents sample dates from January 1998 to December 2012, with labels every two years (J-98, J-00, J-02, J-04, J-06, J-08, J-10, J-12). The y-axis represents concentration in ppb, ranging from 0 to 1,500. A series of purple diamond markers connected by a blue line shows the data points. A solid black line indicates a linear regression fit for the Manganese data.

The graph displays the concentration of manganese over time at Site = Coakley Landfill. The y-axis represents concentration in parts per billion (ppb), ranging from 0 to 6,000. The x-axis represents sample dates from January 1998 to January 2012. Data points are plotted as purple diamonds, and a linear regression line is shown in grey.

Contact Made By:			
Name: Gerardo Millán-Ramos		Title: Remedial Project Manager	Organization: U.S. EPA Region 1
Individual Contacted:			
Name: Mr. Don Mitchell		Title: Adjacent neighbor	Organization: North Hill Nursery
Telephone No: 603-964-7104		Street Address: 206 Lafayette Road	
Fax No:		City, State, Zip: North Hampton, NH, 03862	
E-Mail Address:			
Summary Of Conversation			
<p>Mr. Mitchell is the owner of a plant nursery adjacent to the site, located at 206 Lafayette Road, North Hampton NH. His property lies east of the landfill and up gradient from the GW flow. Representatives from EPA, NHDES and the CLG met with him and his wife on March 11, 2011 to discuss the technical and legal concerns posed by the potential use of an inactive irrigation well in their property. I called Mr. Mitchell to give him an update on the status of the information he requested (i.e. well completion report on the inactive irrigation well in his property, and list of possible options to alleviate high cost of irrigation water). I also explained Mr. Mitchell, the reason for these questions and assured him that they are totally unrelated to the irrigation well issue. I told Mr. Mitchell that his responses would be part of the Five Year Review Report, which will be available to the public, after its completion in September 2011. I proceeded to ask the questions listed on page C-3 of the June 2001 Comprehensive Five Year Review Guidance. The following is a list of the questions and a summary of Mr. Mitchell's response.</p> <ol style="list-style-type: none">What is your overall impression of the project (general sentiment)? <i>I think the project is moving along. I also understand that it needs time for you to see the results you want.</i>What effects have site operations had on the surrounding community? <i>I haven't heard of anything. I imagine some people may want to use the groundwater just as I would, but I am not aware of any such person.</i>Are you aware of any community concerns regarding the site or its operation and administration? If so please give details. <i>No. Some customers ask us about the lump and pipes they see at a distance. We tell them is a Superfund site and that it is being cleaned.</i>			

4. Are you aware of any events, incidents, or activities at the site such as vandalism, trespassing, or emergency responses from local authorities? If so please give details.

No. From time to time we see some people mowing the grass and providing maintenance to it, but that's it.

5. Do you feel well informed about the site's activities and progress?

I feel more informed now. After the meeting we had, I understand you have a timeframe for the cleanup and what is going on.

6. Do you have any comments, suggestions, or recommendations regarding the site's management or operation?

No, I don't.

INTERVIEW RECORD

Site Name: Coakley Landfill, North Hampton & Greenland NH		EPA ID No.: NHD064424153	
Subject: 3 rd Five Year Review		Time: 1:30 PM	Date: 08/02/11

Location of Visit:			
Contact Made By:			
Name: Gerardo Millán-Ramos		Title: Remedial Project Manager	Organization: U.S. EPA Region 1
Individual Contacted:			
Name: Mr. Peter Britz		Title: Landfill Project Coordinator	Organization: Coakley Landfill Group
Telephone No: 603-610-7215		Street Address: 1 Junkins Ave.	
Fax No:		City, State, Zip: Portsmouth NH 03801	
E-Mail Address: plbritz@cityofportsmouth.com			
Summary Of Conversation			

I interviewed Mr. Britz with the questions listed on page C-6 of the June 2001 Comprehensive Five Year Review Guidance. The following is a list of the questions and a summary of Mr. Britz's response.

1. What is your overall impression of the project (general sentiment)?

I think that things are generally progressing. It is not a difficult site to manage but there are some uncertainties about future actions regarding some contaminants, such as 1,4 dioxane, arsenic and manganese. It is difficult to identify trends for these contaminants.

Is the remedy functioning as expected? How well is the remedy performing?

Yes, all contaminants are decreasing at different rates, except arsenic, manganese, and 1-4 dioxane all of which are difficult to identify trends. The remedy is performing well, except for the uncertainties mentioned above.

2. What does the monitoring data show? Are there any trends that show contaminant levels are decreasing?

Yes, the monitoring data shows that all contaminants have concentrations that are decreasing over time, except the three contaminants aforementioned.

3. Is there a continuous on-site O&M presence? If so, please describe staff and activities. If there is not a continuous on-site presence, describe staff and frequency of site inspections and activities.

There is not a continuous site presence, but there are frequent maintenance activities that take place, such as: a) annual sampling and grass mowing.

b) quarterly maintenance of fencing and gates (usually it is done more frequently than quarterly).

4. Have there been any significant changes in the O&M requirements, maintenance schedules, or sampling routines since start-up or in the last five years? If so, do they affect the protectiveness or the effectiveness of the remedy? Please describe changes and impacts.

There have been changes in the sampling routines during the last five years. As a result of changes in the NHDES requirements for the monitoring of hazardous waste sites, we are now sampling for 1,4 dioxane in a selected number of wells. Per EPA and NHDES instructions, for six inch wells with screen lengths greater than 10 feet we are using discrete interval sampling for all analytes. Also, a number of gas monitoring stations have been discontinued due to lack of observed exceedances and at two of the gas monitoring stations the sampling frequency has decreased from four times a year to two times a year.

None, of these changes affect the protectiveness of the remedy. The changes implemented have increased the remedy's efficiency and effectiveness in meeting both NHDES and EPA QA/QC requirements.

5. Have there been unexpected O&M difficulties or costs at the site since start-up or in the last five years? If so, please give details.

The only unexpected costs were those caused by the refinements to the sampling routines described above. They amount to a one time cost of approximately \$7800 plus an annual increase in laboratory and sampling costs.

6. Have there been opportunities to optimize O&M, or sampling efforts? Please describe changes and resultant or desired cost savings or improved efficiency.

The decrease in the number of the gas monitoring stations and their frequency of sampling were opportunities to optimize sampling efforts. They did augment the efficiency of field operations and resulted in cost savings. Also the use of discrete interval sampling at a number of wells has optimized the probability of detecting contaminants at the correct horizontal strata of groundwater flow.

7. Do you have any comments, suggestions, or recommendations regarding the project?

No, not at this time.

INTERVIEW RECORD

Site Name: Coakley Landfill, North Hampton & Greenland NH		EPA ID No.: NHD064424153	
Subject: 3 rd Five Year Review		Time: 9:20 AM	Date: 06/14/2011

Individual Contacted:			
Name: Mr. Joseph Donovan	Title: Project Manager	Organization: NH DES	
Telephone No: 603 271-6811 Fax No: 603 271-2181 E-Mail Address: jdonovan@des.state.nh.us		Street Address: 6 Hazen Drive City, State, Zip: Concord NH 03302-0095	
Summary Of Conversation			
<p>I called Mr. Donovan to perform this interview and ask him question about his comments on this Review. I proceeded to ask the questions listed on page C-4 of the June 2001 Comprehensive Five Year Review Guidance. The following is a list of the questions and a summary of Mr. Donovan's response.</p> <ol style="list-style-type: none"> 1. What is your overall impression of the project (general sentiment)? <i>It seems to be running well. I am little bit more nervous about it than Somersworth Sanitary Landfill because of the presence of 1,4-Dioxane. I want to make sure we get a good handle on the situation to ensure it is safe for everyone.</i> 2. Have there been routine communications or activities (site visits, inspections, reporting activities, etc.) conducted by your office regarding the site? <i>Yes, I have joined EPA at a couple of site visits/inspections, also, I have attended a number of conference calls to discuss ongoing work at the site, and I have reviewed documents prepared by the CLG contractor.</i> 3. Have there been any complaints, violations, or other incidents related to the site requiring a response by your office? If so please give details. <i>No.</i> 4. Do you feel well informed about the site's activities and progress? <i>Yes.</i> 5. Do you have any comments, suggestions, or recommendations regarding the site's management or operation? <i>No, I don't.</i>

Date	Date	Total cost	

3. **Unanticipated or Unusually High O&M Costs During Review Period**

Describe costs and reasons: Not available at the time of inspection. See table 3 in report for information obtained from the CLG. No unanticipated or unusually high O&M cost was noticed.

V. ACCESS AND INSTITUTIONAL CONTROLS ☒ Applicable ☐ N/A

A. Fencing

1. **Fencing damaged**

- ☐ Location shown on site map ☒ Gates secured ☐ N/A
Remarks Extensive damage due to severe snow storms was observed and two pedestrian gates were unsecured. See photos on Appendix E.

B. Other Access Restrictions

1. **Signs and other security measures**

- ☐ Location shown on site map ☐ N/A
Remarks Most gates had attached signs and there are some signs mounted in posts, however there were two pedestrian gates without signs. See photos on Appendix E.

C. Institutional Controls (ICs)**1. Implementation and enforcement**

Site conditions imply ICs not properly implemented

☐ Yes ☒ No ☐ N/A

Site conditions imply ICs not being fully enforced

☐ Yes ☒ No ☐ N/A

Type of monitoring (e.g., self-reporting, drive by)

On a yearly basis, in accordance with NH Department of Environmental Services rule Env-Or 607.06(d), the Coakley Landfill Group (CLG) sends a letter to all property owners within the GMZ established by the GMP. This letter requests the self-reporting of any new drinking water wells installed within these properties. Appendix H shows a sample of the letters sent on February 2011 and a copy of the certified mail receipts. Also, during the sampling events (Spring and Fall every year) the contractor performing the work is required to note any observations about new wells and report it to the CLG.

Specific requirements in deed or decision documents have been met

☒ Yes ☐ No ☐ N/A

Violations have been reported

☐ Yes ☐ No ☒ N/AOther problems or suggestions: ☒ Report attached (Appendix H)**2. Adequacy**☐ ICs are adequate☒ ICs are inadequate☐ N/A

Remarks

There is a need for groundwater extraction restrictions for properties on the eastern side of the landfill. Research of the ICs in this area revealed that there is no legal instrument to prohibit the extraction of groundwater in this area. Groundwater extraction in this area has the potential to alter the flow of groundwater and increase the extent of the plume, thus adding complexities and time to the ongoing remedy.

D. General**1. Vandalism/trespassing**☐ Location shown on site map☒ No vandalism evident

Remarks No vandalism or trespassing was evident on-site, however several of the signs mounted on posts outside the fence had bullet holes in them.

2. Land use changes on site☐ N/A

Remarks Three parcels of land abutting the fence on the southern side of the landfill (see site map/figure and photos in Appendix E), are being used for the storage of construction equipment and materials. Wood posts are extremely close to the fence and wells and are a potential hazard.

3. Land use changes off site☒ N/A

Remarks

VI. GENERAL SITE CONDITIONS**A. Roads**☒ Applicable☐ N/A**1. Roads damaged**☒ Location shown on site map☒ Roads adequate☐ N/A

VII. LANDFILL COVERS <input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A			
A. Landfill Surface			
1.	Settlement (Low spots) Areal extent _____ Depth _____ Remarks _____	<input type="checkbox"/> Location shown on site map <input type="checkbox"/> Depth _____	<input checked="" type="checkbox"/> Settlement not evident
2.	Cracks Lengths _____ Widths _____ Depths _____ Remarks _____	<input type="checkbox"/> Location shown on site map	<input checked="" type="checkbox"/> Cracking not evident
3.	Erosion Areal extent _____ Depth _____ Remarks <u>The toe at the drainage slope in some areas of the landfill has been eroded to the point of exposing the membrane and crushed stone underneath. See photos in Appendix E. However an examination of the design specifications and a cross-section of the cap components revealed that this geotextile is not a post-construction component of the cap. The geotextile was a temporary device to hold in place the gravel of a drainage layer on top of the liner, while the cap was constructed. It was left in place with the understanding that it would eventually be exposed and disintegrate.</u>	<input checked="" type="checkbox"/> Location shown on site map <input type="checkbox"/> Erosion not evident	
4.	Holes Areal extent _____ Depth _____ Remarks _____	<input type="checkbox"/> Location shown on site map	<input checked="" type="checkbox"/> Holes not evident
5.	Vegetative Cover <input checked="" type="checkbox"/> Grass <input checked="" type="checkbox"/> Cover properly established <input checked="" type="checkbox"/> No signs of stress <input type="checkbox"/> Trees/Shrubs (indicate size and locations on a diagram) Remarks _____		
6.	Alternative Cover (armored rock, concrete, etc.) <input checked="" type="checkbox"/> N/A Remarks _____		
7.	Bulges Areal extent _____ Height _____ Remarks _____	<input type="checkbox"/> Location shown on site map	<input checked="" type="checkbox"/> Bulges not evident
8.	Wet Areas/Water Damage <input checked="" type="checkbox"/> Wet areas/water damage not evident <input type="checkbox"/> Wet areas <input type="checkbox"/> Location shown on site map Areal extent _____ <input type="checkbox"/> Ponding <input type="checkbox"/> Location shown on site map Areal extent _____ <input type="checkbox"/> Seeps <input type="checkbox"/> Location shown on site map Areal extent _____ <input type="checkbox"/> Soft subgrade <input type="checkbox"/> Location shown on site map Areal extent _____ Remarks _____		

9.	Slope Instability Areal extent _____ Remarks _____	<input type="checkbox"/> Slides <input type="checkbox"/> Location shown on site map	<input checked="" type="checkbox"/> No evidence of slope instability
B. Benches <input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A (Horizontally constructed mounds of earth placed across a steep landfill side slope to interrupt the slope in order to slow down the velocity of surface runoff and intercept and convey the runoff to a lined channel.)			
1.	Flows Bypass Bench Remarks _____	<input type="checkbox"/> Location shown on site map	<input checked="" type="checkbox"/> N/A or okay
2.	Bench Breached Remarks _____	<input type="checkbox"/> Location shown on site map	<input checked="" type="checkbox"/> N/A or okay
3.	Bench Overtopped Remarks _____	<input type="checkbox"/> Location shown on site map	<input checked="" type="checkbox"/> N/A or okay
C. Letdown Channels <input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A (Channel lined with erosion control mats, riprap, grout bags, or gabions that descend down the steep side slope of the cover and will allow the runoff water collected by the benches to move off of the landfill cover without creating erosion gullies.)			
1.	Settlement Areal extent _____ Depth _____ Remarks _____	<input type="checkbox"/> Location shown on site map	<input checked="" type="checkbox"/> No evidence of settlement
2.	Material Degradation Material type _____ Areal extent _____ Remarks _____	<input type="checkbox"/> Location shown on site map	<input checked="" type="checkbox"/> No evidence of degradation
3.	Erosion Areal extent _____ Depth _____ Remarks _____	<input type="checkbox"/> Location shown on site map	<input checked="" type="checkbox"/> No evidence of erosion
4.	Undercutting Areal extent _____ Depth _____ Remarks _____	<input type="checkbox"/> Location shown on site map	<input checked="" type="checkbox"/> No evidence of undercutting
5.	Obstructions Type _____ <input checked="" type="checkbox"/> No obstructions <input type="checkbox"/> Location shown on site map Areal extent _____ Size _____ Remarks <u>A few rocks from the Rip Rap were observed on the culverts directly across the main entrance of the fence. These rocks were not forming an obstruction at the time, but if more of these accumulate, the culverts could become obstructed. All drainage channels like these should be kept clear of such debris at the time of regular maintenance activities.</u>		

6.	Excessive Vegetative Growth <input type="checkbox"/> No evidence of excessive growth <input checked="" type="checkbox"/> Vegetation in channels does not obstruct flow <input type="checkbox"/> Location shown on site map Type <u>tall grass and a shrub</u> Areal extent _____ Remarks <u>Some of the drainage swales with rip rap show excessive growth of vegetation. See photos on Appendix E. Such vegetation should be removed at the time of the scheduled maintenance activities.</u>
D. Cover Penetrations <input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A	
1.	Gas Vents <input type="checkbox"/> Active <input checked="" type="checkbox"/> Passive <input checked="" type="checkbox"/> Properly secured/locked <input checked="" type="checkbox"/> Functioning <input checked="" type="checkbox"/> Routinely sampled <input checked="" type="checkbox"/> Good condition <input type="checkbox"/> Evidence of leakage at penetration <input type="checkbox"/> Needs Maintenance <input type="checkbox"/> N/A Remarks _____
2.	Gas Monitoring Probes <input checked="" type="checkbox"/> Properly secured/locked <input checked="" type="checkbox"/> Functioning <input checked="" type="checkbox"/> Routinely sampled <input checked="" type="checkbox"/> Good condition <input type="checkbox"/> Evidence of leakage at penetration <input type="checkbox"/> Needs Maintenance <input type="checkbox"/> N/A Remarks <u>None</u>
3.	Monitoring Wells (within surface area of landfill) <input type="checkbox"/> Properly secured/locked <input checked="" type="checkbox"/> Functioning <input checked="" type="checkbox"/> Routinely sampled <input checked="" type="checkbox"/> Good condition <input type="checkbox"/> Evidence of leakage at penetration <input type="checkbox"/> Needs Maintenance <input type="checkbox"/> N/A Remarks <u>Three wells had no lock and the label underneath the cover was barely legible. See photos in Appendix E.</u>
4.	Leachate Extraction Wells <input type="checkbox"/> Properly secured/locked <input type="checkbox"/> Functioning <input type="checkbox"/> Routinely sampled <input type="checkbox"/> Good condition <input type="checkbox"/> Evidence of leakage at penetration <input type="checkbox"/> Needs Maintenance <input checked="" type="checkbox"/> N/A Remarks _____
5.	Settlement Monuments <input type="checkbox"/> Located <input type="checkbox"/> Routinely surveyed <input checked="" type="checkbox"/> N/A Remarks _____

E. Gas Collection and Treatment			<input checked="" type="checkbox"/> Applicable	<input type="checkbox"/> N/A
1.	Gas Treatment Facilities <input type="checkbox"/> Flaring <input type="checkbox"/> Thermal destruction <input type="checkbox"/> Collection for reuse <input type="checkbox"/> Good condition <input type="checkbox"/> Needs Maintenance Remarks <u>N/A</u>			
2.	Gas Collection Wells, Manifolds and Piping <input checked="" type="checkbox"/> Good condition <input type="checkbox"/> Needs Maintenance Remarks _____			
3.	Gas Monitoring Facilities (e.g., gas monitoring of adjacent homes or buildings) <input checked="" type="checkbox"/> Good condition <input type="checkbox"/> Needs Maintenance <input type="checkbox"/> N/A Remarks _____			
F. Cover Drainage Layer			<input type="checkbox"/> Applicable	<input checked="" type="checkbox"/> N/A
1.	Outlet Pipes Inspected <input type="checkbox"/> Functioning <input type="checkbox"/> N/A Remarks _____			
2.	Outlet Rock Inspected <input type="checkbox"/> Functioning <input type="checkbox"/> N/A Remarks _____			
G. Detention/Sedimentation Ponds			<input type="checkbox"/> Applicable	<input checked="" type="checkbox"/> N/A
1.	Siltation Areal extent _____ Depth _____ <input type="checkbox"/> N/A <input type="checkbox"/> Siltation not evident Remarks _____			
2.	Erosion Areal extent _____ Depth _____ <input type="checkbox"/> Erosion not evident Remarks _____			
3.	Outlet Works <input type="checkbox"/> Functioning <input type="checkbox"/> N/A Remarks _____			
4.	Dam <input type="checkbox"/> Functioning <input type="checkbox"/> N/A Remarks _____			

H. Retaining Walls		<input type="checkbox"/> Applicable	<input checked="" type="checkbox"/> N/A
1.	Deformations Horizontal displacement _____ Rotational displacement _____ Remarks _____	<input type="checkbox"/> Location shown on site map	<input type="checkbox"/> Deformation not evident
2.	Degradation Remarks _____	<input type="checkbox"/> Location shown on site map	<input type="checkbox"/> Degradation not evident
I. Perimeter Ditches/Off-Site Discharge			
1.	Siltation Areal extent _____ Remarks _____	<input type="checkbox"/> Location shown on site map	<input type="checkbox"/> Siltation not evident
2.	Vegetative Growth <input type="checkbox"/> Vegetation does not impede flow Areal extent _____ Remarks _____	<input type="checkbox"/> Location shown on site map	<input type="checkbox"/> N/A
3.	Erosion Areal extent _____ Remarks _____	<input type="checkbox"/> Location shown on site map	<input type="checkbox"/> Erosion not evident
4.	Discharge Structure Remarks _____	<input type="checkbox"/> Functioning	<input type="checkbox"/> N/A
VIII. VERTICAL BARRIER WALLS			
		<input type="checkbox"/> Applicable	<input checked="" type="checkbox"/> N/A
1.	Settlement Areal extent _____ Remarks _____	<input type="checkbox"/> Location shown on site map	<input type="checkbox"/> Settlement not evident
2.	Performance Monitoring Type of monitoring _____ <input type="checkbox"/> Performance not monitored Frequency _____ Head differential _____ Remarks _____	<input type="checkbox"/> Evidence of breaching	

C. Treatment System		<input type="checkbox"/> Applicable <input checked="" type="checkbox"/> N/A
1.	Treatment Train (Check components that apply) <input type="checkbox"/> Metals removal <input type="checkbox"/> Oil/water separation <input type="checkbox"/> Bioremediation <input type="checkbox"/> Air stripping <input type="checkbox"/> Carbon adsorbers <input type="checkbox"/> Filters _____ <input type="checkbox"/> Additive (e.g., chelation agent, flocculent) _____ <input type="checkbox"/> Others _____ <input type="checkbox"/> Good condition <input type="checkbox"/> Needs Maintenance <input type="checkbox"/> Sampling ports properly marked and functional <input type="checkbox"/> Sampling/maintenance log displayed and up to date <input type="checkbox"/> Equipment properly identified <input type="checkbox"/> Quantity of groundwater treated annually _____ <input type="checkbox"/> Quantity of surface water treated annually _____ Remarks _____ _____	
2.	Electrical Enclosures and Panels (properly rated and functional) <input type="checkbox"/> N/A <input type="checkbox"/> Good condition <input type="checkbox"/> Needs Maintenance Remarks _____ _____	
3.	Tanks, Vaults, Storage Vessels <input type="checkbox"/> N/A <input type="checkbox"/> Good condition <input type="checkbox"/> Proper secondary containment <input type="checkbox"/> Needs Maintenance Remarks _____ _____	
4.	Discharge Structure and Appurtenances <input type="checkbox"/> N/A <input type="checkbox"/> Good condition <input type="checkbox"/> Needs Maintenance Remarks _____ _____	
5.	Treatment Building(s) <input type="checkbox"/> N/A <input type="checkbox"/> Good condition (esp. roof and doorways) <input type="checkbox"/> Needs repair <input type="checkbox"/> Chemicals and equipment properly stored Remarks _____ _____	
6.	Monitoring Wells (pump and treatment remedy) <input type="checkbox"/> Properly secured/locked <input type="checkbox"/> Functioning <input type="checkbox"/> Routinely sampled <input type="checkbox"/> Good condition <input type="checkbox"/> All required wells located <input type="checkbox"/> Needs Maintenance <input type="checkbox"/> N/A Remarks _____ _____	
D. Monitoring Data		
1.	Monitoring Data <input checked="" type="checkbox"/> Is routinely submitted on time <input checked="" type="checkbox"/> Is of acceptable quality	
2.	Monitoring data suggests: <input type="checkbox"/> Groundwater plume is effectively contained <input checked="" type="checkbox"/> Contaminant concentrations are declining	

D. Monitored Natural Attenuation**1. Monitoring Wells (natural attenuation remedy)**☐ Properly secured/locked☒ Functioning☒ Routinely sampled☒ Good condition☒ All required wells located☐ Needs Maintenance☐ N/A

Remarks Well MW-4 was found unlocked as well as three wells within OU-1 (the fenced landfill).

X. OTHER REMEDIES

If there are remedies applied at the site which are not covered above, attach an inspection sheet describing the physical nature and condition of any facility associated with the remedy. An example would be soil vapor extraction. N/A

XI. OVERALL OBSERVATIONS**A. Implementation of the Remedy**

Describe issues and observations relating to whether the remedy is effective and functioning as designed. Begin with a brief statement of what the remedy is to accomplish (i.e., to contain contaminant plume, minimize infiltration and gas emission, etc.).

The objective of the OU-1 ROD is to protect the drinking water aquifer by minimizing further migration of contaminants to the groundwater and surface water and eliminate threats posed by direct contact with or ingestion of contaminated soils and wastes at the site. The OU-1 (source control) response action includes capping and fencing the landfill, collecting and venting landfill gases, the long term monitoring of groundwater, surface water and leachates from the landfill, and the implementation of institutional controls to prevent contact with site contaminants and to protect the components of the remedy. The objective of the OU-2 ROD is to manage the migration of contaminated groundwater outside the landfill boundaries. The OU-2 (management of migration) response action includes using institutional controls to prevent use of contaminated groundwater; using natural attenuation for the contaminated groundwater plume; and groundwater monitoring.

The integrity of the landfill cap, gas vents, monitoring wells, gas monitoring probes, and drainage swales is intact. Rain and surface water runoff is being diverted from the landfill wastes, therefore further migration of contaminants to the groundwater and surface water is being effectively minimized. The intact integrity of these components also creates an effective barrier between the landfill wastes, its contaminated soils, and people or animals that may have direct contact and/or ingest these. However, the extensive damage on the fence and the lack of locks on some gates and monitoring wells, the proximity of construction materials to the fence (i.e. wooden posts), and the excessive growth of vegetation on some drainage wells and at a section of the fence, pose potential threats that could compromise the integrity of the remedy components and its long-term protectiveness.

The integrity of the monitoring wells in OU-2, the continued performance of annual groundwater, surface water and leachate sampling events, and the existence of Institutional Controls (ICs) in the form of a Groundwater Management Permit issued by NHDES, is effectively managing the migration of contaminated groundwater and preventing its ingestion by humans. However, the fact that some wells were unlocked and poorly identified poses a potential threat to the long term effectiveness of the remedy.

In conclusion, the inspection observations indicate that the remedy is functioning as designed, but the deficiencies noted need to be corrected in order to ensure long-term protectiveness and continued monitoring is required.

B. Adequacy of O&M

Describe issues and observations related to the implementation and scope of O&M procedures. In particular, discuss their relationship to the current and long-term protectiveness of the remedy.

- Fence damage
Extensive damage created by winter storms was observed. It does not bear on current protectiveness but future protectiveness could be compromised if repairs are not made.
- Gates w/o locks and/or signs
Some pedestrian gates were observed to be missing locks and/or signs. No indication of trespassing was observed but gates must be locked in order to insure protectiveness.
- Monitoring wells w/o locks and proper label
Three wells had no lock and the label underneath the cover was barely legible. This needs to be addressed in order to avoid cross-contamination and ensure future protectiveness.
- Electrical posts too close to well MW-5 and one of them almost penetrating the fence
These posts and construction equipment pose a potential threat of damage to wells MW-5 and MW-2, and to the fence. Current protectiveness is not affected but future protectiveness is compromised if equipment and materials are not relocated at least five feet from these structures.
- Tree too close to fence with limbs on top of it
A tree was observed to be too close to the western section of the fence and some branches were over the fence and lying directly on top of the fence. Current protectiveness is not affected but future protectiveness could be compromised if tree is not removed and/or trimmed.
- Excessive vegetation on some drainage swales and a few rocks inside culverts.
All drainage channels must be free of excessive vegetation and debris in order to ensure the free flow of runoff water. Left unchecked, they have the potential to compromise future protectiveness.

C. Early Indicators of Potential Remedy Problems

Describe issues and observations such as unexpected changes in the cost or scope of O&M or a high frequency of unscheduled repairs, that suggest that the protectiveness of the remedy may be compromised in the future.

NONE

D. Opportunities for Optimization

Describe possible opportunities for optimization in monitoring tasks or the operation of the remedy.

NONE

3. 5-YR - Sample once every 5 years beginning in 2014.
4. The Volatile Organic Compounds analyte list for surface water and leachate shall be the NHDES Waste Management Division Full List of Analytes for Volatile Organics (NHDES Full List). Leachate sample (L-1) shall be analyzed for 1,4 Dioxane, ethylene dibromide (EDB) and dibromochloropropane (DBCP) during the 2010 sampling event. Surface water samples shall not be analyzed for 1,4 Dioxane, EDB or DBCP. The Group, USEPA and NHDES shall determine whether analysis of 1,4 Dioxane, EDB or DBCP is required after 2010.

APPENDIX H – INQUIRY ON NEW DRINKING WATER WELLS

February 17, 2011

Elmer Sewall
340 Breakfast Hill Road
Greenland, NH 03840

Dear Mr. Sewall,

Approximately one year ago you were notified because your property is one of the properties within the proposed groundwater management zone for the Coakley Landfill.

As required by NH Department of Environmental Services rule Env-Or 607.06(d), this letter is being sent to inquire as to whether there are any new drinking water supply wells on your property. If so please notify me at the address below.

If you have questions or would like additional information please contact me at 603-610-7215, by email at plbritz@cityofportsmouth.com or by mail at the City of Portsmouth, 1 Junkins Avenue, Portsmouth, NH 03801.

Sincerely,

Peter L. Britz
Coakley Technical Committee

Coakley Landfill
Third Five-Year Review

APPENDIX I – GMP & GMP NOTICE

The State of New Hampshire
DEPARTMENT OF ENVIRONMENTAL SERVICES

Thomas S. Burack, Commissioner

June 19, 2008

Peter Britz
Environmental Planner
City of Portsmouth
1 Junkins Avenue
Portsmouth, NH 03801

**SUBJECT: North Hampton – Coakley Landfill Superfund Site, 480 Breakfast Hill Road
Groundwater Management Permit, DES Site # 198712001, Project RSN # 431**

**Groundwater Management Permit Application, prepared by Hancock &
Associates, dated May 14, 2008**

Dear Mr. Britz:

Please find enclosed Groundwater Management Permit Number GWP-198712001-N-001, approved by the Department of Environmental Services (Department). This permit is issued for a period of 5 years to monitor the effects of past discharges of contaminants of concern, as defined in Table 12 of the 1994 Site Record of Decision.

All monitoring summaries and all required sampling results must be submitted to the Groundwater Management Permits Coordinator at the address below. All correspondence shall contain a cover letter that clearly shows the Department identification number for the site (DES Site # 198712001). **Please note that upon issuance of this permit, it is only necessary to submit monitoring results to the "Groundwater Management Permits Coordinator" and not to my attention.**

Please note that Condition # 9 requires the permit holder to provide notice of the permit by certified mail, within 30 days of permit issuance, to all owners of lots of record within the Groundwater Management Zone. Documentation of the notification, in the form of a copy of the notice with return receipt(s), shall be submitted to the Department within 60 days of permit issuance.

Also, please note that Condition # 10 requires the permit holder to record "Notice" of the permit (not the permit), within 60 days of issuance, at the registry of deeds in the chain of title for each lot within the Groundwater Management Zone. An example Notice is enclosed for your use. A copy of each recorded Notice shall be submitted to the Department within 30 days of recordation.

The

NEW HAMPSHIRE DEPARTMENT OF ENVIRONMENTAL SERVICES

hereby issues

GROUNDWATER MANAGEMENT PERMIT NO. GWP-198712001-N-001

to the permittee

COAKLEY LANDFILL GROUP

to monitor the past discharge of

Contaminants of Concern, as identified in Table 12 of the 1994 Record of Decision

at

COAKLEY LANDFILL
(480 Breakfast Hill Road)

in NORTH HAMPTON, N.H.

via the groundwater monitoring system comprised of

12 OU-1 monitoring wells, 25 OU-2 monitoring wells, 3 surface water, and 2 sediment and 1
leachate sampling station(s)

as depicted on the Site Plan entitled

"Environmental Monitoring Network"

dated August 16, 2007, prepared by Golder & Associates, Inc. of Manchester, New Hampshire

TO: COAKLEY LANDFILL GROUP
1 JUNKINS AVENUE
PORTSMOUTH, NEW HAMPSHIRE 03801

Date of Issuance: June 19, 2008

Date of Expiration: June 18, 2013

Pursuant to authority in N.H. RSA 485-C:6-a, the New Hampshire Department of Environmental Services (Department), hereby grants this permit to monitor past discharges to the groundwater at the above described location for five years subject to the following conditions:

(continued)

STANDARD MANAGEMENT PERMIT CONDITIONS

1. The permittee shall not violate Ambient Groundwater Quality Standards adopted by the Department (N.H. Admin. Rules Env-Or 600) in groundwater outside the boundaries of the Groundwater Management Zone, as shown on the referenced site plan.
2. The permittee shall not cause groundwater degradation that results in a violation of surface water quality standards (N.H. Admin. Rules Env-Ws 1700) in any surface water body.
3. The permittee shall allow any authorized staff of the Department, or its agent, to enter the property covered by this permit for the purpose of collecting information, examining records, collecting samples, or undertaking other action associated with this permit.
4. The permittee shall apply for the renewal of this permit at least 90 days prior to its expiration date.
5. This permit is transferable only upon written request to, and approval of, the Department. Compliance with the existing Permit shall be established prior to permit transfer. Transfer requests shall include the name and address of the person to whom the permit transfer is requested, signature of the current and future permittee, and a summary of all monitoring results to date.
6. The Department reserves the right, under N.H. Admin. Rules Env-Or 600, to require additional hydrogeologic studies and/or remedial measures if the Department receives information indicating the need for such work.
7. The permittee shall maintain a water quality monitoring program and submit monitoring results inclusive with the annual report to the Department's Groundwater Management Permits Coordinator no later than 120 days after sampling. Samples shall be taken from on-site monitoring wells and surface water sampling points as shown and labeled on the referenced site plan and other sampling points listed on the following table in accordance with the schedule outlined herein:

<u>Monitoring Locations</u>	<u>Sampling Frequency</u>	<u>Parameters</u>
MW-5S, MW-6, FPC-2A, FPC-2B, FPC-4B, FPC-6A, FPC-6B, FPC-8B, GZ-105, GZ-123, GZ-125, AE-2A, AE-2B, AE-3A, AE-3B, AE-4A, AE-4B	August each year	Field parameters, dissolved iron & manganese, target analyte list (TAL) metals (total), NHDES Waste Management Division Full List of Analytes for Volatile Organics (Full List VOCs).
MW-4, MW-9, OP-2, OP-5, FPC-7A, FPC-7B, FPC-9A, FPC-11A, FPC-11B, AE-1A, AE-1B	August each year	Field parameters, dissolved iron & manganese, TAL metals (total).
MW-5D, MW-8, MW-11, FPC-8A	August each year	Field parameters, TAL metals (total), Full List VOCs.
MW-10, RMW-3, BP-4, FPC-5A, FPC-5B	August each year	Field parameters, TAL metals (total).

(continued)

GWP-198712001-N-001

<u>Monitoring Locations</u>	<u>Sampling Frequency</u>	<u>Parameters</u>
R-3, R-5	August each year	Field parameters, Full List VOCs.
SW-4, SW-5, SW-103	August each year	Field parameters, ammonia, TAL metals (total), Full List VOCs.
SED-4, SED-5	August each year	TAL metals (total).
L-1	August each year	Field parameters, COD, ammonia, TAL metals (total), Full List VOCs.

Sampling shall be performed in accordance with the documents listed in Env-Or 610.02 (e). Samples shall be analyzed by a laboratory certified by the U.S. Environmental Protection Agency or the New Hampshire Department of Environmental Services. All overburden groundwater samples collected for metal analyses (iron, manganese, and Drinking Water Metals) shall be analyzed for dissolved metals; and thus must be field filtered (with a 0.45-micron filter) and acidified after filtration in the field. Surface water samples and samples collected from bedrock or water supply wells shall be analyzed for total metals, and shall not be filtered. Surface water samples shall be collected and analyzed in accordance with 40 CFR 136. As referred to herein, the term "Target Analyte Metals (TAL)" refers to aluminum, arsenic, barium, cadmium, calcium, chromium, copper, iron, lead, magnesium, mercury, nickel, potassium, selenium, silver, sodium, thallium, zinc, cobalt, beryllium, manganese, antimony and vanadium.

Summaries of water quality shall be submitted annually in December to the Department's Waste Management Division, attention Groundwater Management Permits Coordinator, using a format acceptable to the Department. The Summary Report shall include the information listed in Env-Or 607.04 (a), as applicable.

The Annual Summary Report shall be prepared and stamped by a professional engineer or professional geologist licensed in the State of New Hampshire.

8. Issuance of this permit is based on the Groundwater Management Permit Application dated May 14, 2008, and the historical documents found in the Department file DES Site # 198712001. The Department may require additional hydrogeologic studies and/or remedial measures if invalid or inaccurate data are submitted.
9. Within 30 days of the date of Department approval of this Groundwater Management Permit, the permittee shall provide notice of the permit by certified mail, return receipt requested, to all owners of lots of record within the Groundwater Management Zone. The permittee shall submit documentation of this notification to the Department within 60 days of permit issuance.
10. Within 60 days of the date of Department approval of this Groundwater Management Permit, the permit holder shall record notice of the permit in the registry of deeds in the chain of title for each lot within the Groundwater Management Zone. **This recordation requires that the registry be provided with the name of current property owner and associated book and page numbers for the deed of each lot encumbered by this permit. Portions of State/Town/City roadways and associated right-of-way properties within the Groundwater Management Zone do not require recordation.** A copy of each recorded notice shall be submitted to the Department within 30 days of recordation.

11. Within 30 days of discovery of a violation of an ambient groundwater quality standard at or beyond the Groundwater Management Zone boundary, the permittee shall notify the Department in writing. Within 60 days of discovery, the permittee shall submit recommendations to correct the violation. The Department shall approve the recommendations if the Department determines that they will correct the violation.

SPECIAL CONDITIONS FOR THIS PERMIT

12. Recorded property within the Groundwater Management Zone shall include the lots as listed and described in the following table:

*A portion of the Sewall parcel (Tax Map R1, Lot #13) is included as within the GMZ and is described as follows:

Commencing at a point at the intersection of the westerly sideline of the Boston and Maine Railroad right of way and the town line of Greenland and North Hampton, thence; N80°19'25"W four hundred sixty-six and fourteen hundredths feet (466.14') by the town line of North Hampton to a point, thence; N79°55'00"W eighteen and ninety-nine hundredths feet (18.99') by the town line of North Hampton to a point, thence; N17°29'30"E one thousand ninety-seven and eighty hundredths feet (1097.80') by other land of the Barbara E. Sewall Revocable Trust to a point, thence; S76°51'30"E four hundred thirty-four and zero hundredths feet (434.00') by other land of the Barbara E. Sewall Revocable Trust to a point, thence; S13°08'30"W one hundred sixty-three and twenty-one hundredths feet (163.21') by land of the Boston and Maine Railroad right of way to a point, thence; S35°09'35"W eighty-eight and two hundredths feet (88.02') by land of the Boston and Maine Railroad right of way to a point, thence; S13°08'30"W eight hundred twenty and sixty-four hundredths feet (820.64') by land of the Boston and Maine Railroad right of way to the point of beginning.

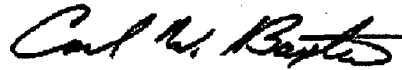

13. All monitoring wells at the site shall be properly maintained and secured from unauthorized access or surface water infiltration.

14. UNDEVELOPED LOTS WITHIN THE GROUNDWATER MANAGEMENT ZONE:

- A) Consistent with Env-Or 607.06(d), for each undeveloped lot which is included (in whole or part) in the groundwater management zone and which lacks access to a public water system, the permittee shall inquire of the property owner at least once each year as to whether there are any new drinking water supply well(s) on the property. The permittee shall include a report on this inquiry in the Annual Summary Report required in Standard Permit Condition # 7.
- B) Upon discovery of a new drinking water supply well(s), whether as a result of the annual inquiry, upon notice from the lot owner or by any other means, the permittee shall provide written notification to the Department and, to ensure compliance with Env-Or 607.06(a), prepare a contingency plan to provide potable drinking water in the event a well is or becomes contaminated above the drinking water standards. The potable water supply shall meet applicable federal and state water quality criteria. This plan shall be submitted to the Department for approval within 15 days of the date of discovery.
- C) Consistent with Env-Or 607.06(e), the permittee shall cause all new drinking water supply well(s) to be sampled within 30 days of discovery. The well(s) shall be sampled for all the parameters included in Standard Condition # 7, unless otherwise specified in writing by the Department. The permittee shall forward all analytical results to the Department and the owner of the drinking water supply well within 7 days of receipt of the results.

Based on the results:

- i. If the new well is not contaminated as defined in Env-Or 603.01, the permittee shall continue to sample the new wells annually as part of the permit.
- ii. If analytical results indicate the water is contaminated above applicable federal and state water quality criteria, the permittee shall:
 - a. Notify the owner immediately;
 - b. Obtain a confirmation set of analytical samples within 14 days of receipt of the original results indicating a groundwater quality standard exceedence; and
 - c. Following confirmation of groundwater quality standard exceedence, immediately implement the contingency plan submitted for approval pursuant to Special Permit Condition # 14B, above.

Carl W. Baxter, P.E., Administrator
Hazardous Waste Remediation Bureau
Waste Management Division

Under RSA 21-0:14 and 21-0:9-V, any person aggrieved by any terms or conditions of this permit may appeal to the Waste Management Council in accordance with RSA 541-A and N.H. Admin. Rules, Env-WMC 200. Such appeal must be made to the Council within 30 days and must be addressed to the Chairman of the Waste Management Council, c/o Appeals Clerk, Department of Environmental Services Legal Unit, 29 Hazen Drive, P.O. Box 95, Concord, NH 03302-0095.

NOTICE OF GROUNDWATER MANAGEMENT PERMIT

GWP-_____-A-001
TO BE RECORDED AGAINST:

[IDENTIFY OWNER OF PARCEL AND
BOOK AND PAGE OF DEED IN TO THAT PARTY]

NOTICE IS HEREBY GIVEN THAT: The New Hampshire Department of Environmental Services (Department) has issued Groundwater Management Permit #GWP-_____-A-001 ("Permit") to [Permittee]. Pursuant to Env-Or 607.09(a) this notice is recorded for each property located within the groundwater management zone identified in the Permit at the Registry of Deeds for the county in which the property is located.

The Permit establishes a Groundwater Management Zone ("GMZ"), an area within which groundwater use must be controlled and monitored due to the presence of groundwater contaminants that exceed the State's Ambient Groundwater Quality Standards ("AGQS"). The Permit may include conditions to and restrictions upon the use of the properties within the GMZ, including restrictions on the use of groundwater.

The Permit was issued on [Date] and expires on [Date], unless renewed for subsequent five-year period(s). This Notice will remain in effect until such time as the AGQS are restored within the GMZ and the Department issues a Release of Recordation to the Permittee. The Permit is available for review at the New Hampshire Department of Environmental Services, 29 Hazen Drive, Concord, NH 03301 or can be viewed by searching under our OneStop Data Retrieval Site at http://www2.des.nh.gov/OneStop/ORCB_Query.aspx?Project+CCST.

July 18, 2008

Dear Permit Coordinator:

Enclosed please find certified mail receipts for each of the owners of the lots of record within the Groundwater Management Zone. As required by Permit # 198712001-2-001 condition 9. Of the notices sent one had no receipt returned and four were returned from sender.

Also included please find a sample copy of the letter which was sent out and the notice which was included in the letter.

I believe this satisfies all of the requirements for the initial filing of this permit. I will be reporting in approximately one year's time to provide the annual requirements found in the permit.

If you have any questions or need additional information please do not hesitate to contact me at (603)610-7215 or plbritz@ch.cityofportsmouth.com

Sincerely,

Peter L. Britz

RE: Property at 3 Lafayette Terrace
Assessor Plan 21, Lot 18

Dear Sir/Madam:

Below please find the notice of Groundwater Management Permit as filed at the Rockingham Registry of Deeds. This letter and the notice, found below, was filed on June 25th 2008 in accordance with the permit conditions of the Groundwater Management Permit issued by the New Hampshire Department of Environmental Services on June 19th 2008. If you have questions please contact Peter Britz at (603)610-7215 or by email at plbritz@ch.cityofportsmouth.com.

Sincerely,

Robert P. Sullivan, City Attorney

**NOTICE OF GROUNDWATER MANAGEMENT PERMIT
GWP-198712001-N-001
TO BE RECORDED AGAINST:**

Coakley Landfill Inc. Bk1340 P254 and Bk1347 P172

NOTICE IS HEREBY GIVEN THAT: The New Hampshire Department of Environmental Services (Department) has issued Groundwater Management Permit #GWP-198712001-N-001 ("Permit") to the Coakley Landfill Group. Pursuant to Env-Or 607.09(a) this notice is recorded for each property located within the groundwater management zone identified in the Permit at the Registry of Deeds in Rockingham County.

The Permit establishes a Groundwater Management Zone ("GMZ"), an area within which groundwater use must be controlled and monitored due to the presence of groundwater contaminants that exceed the State's Ambient Groundwater Quality Standards ("AGQS"). The Permit may include conditions to and restrictions upon the use of the properties within the GMZ, including restrictions on the use of groundwater.

The Permit was issued on June 19, 2008 and expires on June 18, 2013, unless renewed for subsequent five-year period(s). This Notice will remain in effect until such time as the AGQS are restored within the GMZ and the Department issues a Release of Recordation to the Permittee. The Permit is available for review at the New Hampshire Department of Environmental Services, 29 Hazen Drive, Concord, NH 03301 or can be viewed by searching under our OneStop Data Retrieval Site at http://www2.des.nh.gov/OneStop/ORCB_Query.aspx?Project+CCST.

APPENDIX J – EVALUATION OF POTENTIAL TOXICITY OF SEDIMENTS

TECHNICAL MEMORANDUM

To: Gerardo Millan-Ramos
From: Richard Sugatt
Date: June 29, 2011
Subject: Approach for evaluating sediment at Coakley Landfill during five year review periods

Summary

The approach for evaluating potential toxicity of sediments at Coakley Landfill Superfund Site in the future is summarized here and detailed below. Every five years the worst-case sediment location at Coakley Landfill Superfund Site (SED-05) will be sampled and analyzed for inorganics. The Benchmark quotient (BQ) will be calculated by dividing the measured concentration of each metal by its site-specific benchmark, derived herein. The average BQ for all of the detected inorganics will be calculated and compared to the empirically demonstrated average BQ of 1 for the samples shown to be non-toxic by toxicity testing in 2007. Based on the average ratio of 4 between Threshold Effect Concentrations (TECs) and Probable Effect Concentrations (PECs) for metals from MacDonald et al (2000), additional toxicity testing will be required only if the average BQ exceeds 4 in future sediment samples. Otherwise, only analysis of inorganics in one sample from SED-05 would be conducted once during the next five year review period and evaluated by the describe BQ process.

Detailed Description of Approach

Sediment samples from several locations at Coakley Landfill have been analyzed on an annual basis since at least 2001. As part of the latest Five Year Review, it was determined that several inorganics in sediment exceeded generally accepted no-effect ecological benchmarks. The ecological benchmarks were the freshwater sediment benchmarks from EPA Region 3, which, for metals, are the same as the Threshold Effect Concentrations (TECs) from MacDonald et al (2000). Since exceedance of these benchmarks suggested that the site sediments might be toxic to aquatic organisms, it was decided to investigate prior to the subsequent five year review period whether there was any toxicity to aquatic organisms by sediment sampled at the site.

Since sediments with benchmark exceedances are often not toxic when tested in laboratory toxicity tests, it was not justified to conduct expensive toxicity testing at all historic sediment locations that had benchmark exceedances. Instead, it was decided to analyze another round of samples from these locations for inorganics concentrations and to conduct one toxicity test on the location that had the highest frequency and magnitude of benchmark exceedances. SED-05 was selected for toxicity testing because it had the highest benchmark quotients for the most chemicals. In 2007, a sediment sample was collected from this location and tested for toxicity on the freshwater amphipod *Hyallela azteca* in a standard 10-day test. There were no ecologically significant effects on the test organisms. As a result, it was concluded that the concentrations of inorganics measured in the sediment sample comprised site-specific no-effect concentrations that could be used as site-specific benchmarks for this site.

As shown in Table 1, the site-specific no-effect concentration was higher than the EPA Region 3 ecological benchmark for most of the chemicals that have benchmarks. Since the EPA Region 3 benchmarks represent non-toxic concentrations on a generic, non-site-specific basis, and the site-specific no-effect concentrations represent non-toxic concentrations in the particular type of sediments at the site, it is reasonable to assume that the site-specific no-effect benchmark should be the higher of the site-specific no-effect concentration or the EPA Region 3 benchmark.

The approach for evaluating potential toxicity of sediment collected in the future uses a benchmark quotient approach to evaluate the frequency and magnitude of benchmark exceedances using future data compared to site-specific no-effect benchmarks. This approach is exemplified in Table 1 in which the concentration of each inorganic in sample SED-05 taken in August 2009 is divided by its site-specific benchmark to derive a benchmark quotient. The benchmark quotient (BQ) approach is similar to the Hazard Quotient (HQ) approach in which the concentration at a site is divided by the no-effect concentration.

As shown in Table 1, the August 2009 concentration of chromium, nickel, and cobalt exceeded the site-specific benchmark concentration, with benchmark quotients of 1.1, 1.1, and 1.1, respectively. The toxicity of the August, 2009 sample was not measured, so the next step in developing an approach for future sampling is to estimate how much higher the concentrations would have to be compared to the non-toxic samples in November 2007 in order to be toxic. Of course, this can be done with total certainty only by conducting toxicity tests; however, the following approach can be used to estimate how high the BQ must go before toxicity is likely.

MacDonald et al (2000) derived TECs which are the concentrations, below which no toxicity is expected, but they also derived Probable Effect Concentrations (PECs) which are the concentrations, above which toxicity is likely, but not necessarily certain, to occur. For metals, the PEC was, on average, a factor of four higher than the TEC (Table 2). Therefore, it is reasonable to conclude that benchmark quotients would have to be about four times higher than no-effect benchmarks for toxicity to be likely.

Since the site-specific no-effect benchmarks for the inorganics in the 2007 non-toxic SED-05 sample are the same as the maximum measured concentrations of the same inorganics in the non-toxic sample, the average BQ in that non-toxic sample must be equal to 1, by definition. Therefore, the average benchmark quotient in a future sample would have to be 1 or less to be assured that the future sample is non-toxic. Conversely, the average BQ in a future sample would have to be no more than 4 to ensure that the future sample is unlikely to be toxic. Therefore, a future sample is likely to be non-toxic if the average BQ is less than or equal to 1, and likely to be toxic if the average BQ is equal to or greater than 4. It will be uncertain whether or not the sample is likely to be toxic if the average BQ is between 1 and 4. Therefore, the following criteria will be used to evaluate the potential for toxicity in future sediment samples:

- If average BQ is ≤ 1 , conclude sample is likely to be non-toxic.
- If average BQ is > 1 but < 4 , conclude that it is uncertain whether sample is likely to be toxic.
- If average BQ is ≥ 4 , conclude sample is likely to be toxic.

As an example of this type of approach, Table 1 shows that the average BQ for the sediment sample taken from SED-05 in August 2009 is 0.7. Based on the above criteria, it is concluded that this sample is likely to be non-toxic. If the average BQ had been between 1 and 4, then no conclusion could be made whether or not the sample was likely to be toxic. If the average BQ had been 4 or greater, then it would be concluded that the sample is likely to be toxic; however, only a toxicity test would be able to confirm that the sample was actually toxic. Therefore, it is proposed that a toxicity test be conducted only if future sampling shows that the average BQ is 4 or greater.

The concentrations of inorganics in the worst-case area of SED-05 are likely to increase only very slowly, if at all, based on the balance of leachate input via groundwater, overland erosive transport from the landfill surface and output via surface water export. Table 3 shows that there is no discernible trend in inorganics concentrations in SED-05 from 2001 to 2009. Therefore, it is reasonable to conclude that measuring inorganics and conducting the described BQ evaluation at an interval of five years will be sufficient to identify the development of conditions that might result in toxicity.

Therefore, the recommended criteria are summarized below along with the action(s) to be taken for each criterion:

- If average BQ is ≤ 1 , conclude sample is likely to be non-toxic. Once during the next five year review period, collect and analyze one sample from SED-05 for inorganics and repeat BQ evaluation.
- If average BQ is > 1 but < 4 , conclude that it is uncertain whether sample is likely to be toxic. Once during the next five year review period, collect and analyze one sample from SED-05 and repeat the BQ evaluation.
- If average BQ is ≥ 4 , conclude sample is likely to be toxic. Conduct 10-day amphipod toxicity test on a stored refrigerated aliquot of this sample or a freshly collected sample from SED-05 that is also analyzed for inorganics.
- If the tested sample is non-toxic, conclude that the area is not toxic and once during the next five year review period collect and analyze one sample from SED-05 for inorganics and repeat the BQ evaluation.
- If the tested sample is toxic, design appropriate remedial actions during the next five year review period.

APPENDIX K - EVALUATION OF POTENTIAL VAPOR INTRUSION

MEMORANDUM

To: Gerardo Millan-Ramos
From: Richard Sugatt
Date: July 19, 2011
Subject: Evaluation of potential vapor intrusion at Coakley Landfill Superfund Site

The maximum concentrations of volatile organic chemicals (VOCs) in groundwater at Coakley Landfill Superfund Site were compiled and compared with the vapor intrusion target groundwater concentration in Table 2c of the November 2002 "OSWER Draft Guidance for Evaluating the Vapor Intrusion to Indoor Air Pathway from Groundwater and Soils (Subsurface Vapor Intrusion Guidance)" (EPA, 2002). These target concentrations represent the concentration in groundwater associated with a cancer risk of 1×10^{-6} or a hazard quotient of 1 in indoor air with an attenuation factor of 0.001 from groundwater to indoor air. However, the target concentration for those VOCs with a Maximum Contaminant Level (MCL) was set to the MCL as a matter of policy, rather than risk. Benzene is the only chemical that has a MCL and occurred in groundwater at the Site.

In order to provide a cancer risk-based target concentration in groundwater for this chemical, EPA Region I calculated a risk-based target concentration in groundwater using the equations in the 2002 EPA draft guidance, as follows:

$$1) \text{ Target Indoor Air (ug/m}^3\text{)} = \text{Target Cancer Risk} \times \text{ATc} / (\text{EF} \times \text{ED} \times \text{IUR})$$

where: Target Cancer Risk = $1\text{E-}06$

ATc = averaging time, carcinogens (25,550 days)

EF = exposure frequency for a resident (350 days/year)

ED = exposure duration for a resident (30 years)

IUR = inhalation unit risk (ug/m^3)⁻¹

$$2) \text{ Target Soil Gas (ug/m}^3\text{)} = \text{Target Indoor Air} / \alpha$$

where: α = soil gas to indoor air attenuation factor (0.1 for target soil gas)

$$3) \text{ Target Groundwater (ug/L)} = \text{Target Indoor Air} \times 10^{-3} \text{ m}^3/\text{L} / (\text{H} \times \alpha)$$

where: α = soil gas to indoor air attenuation factor (0.001 and partitioning across water table obeys Henry's Law

H = Henry's Law Constant (dimensionless)

Using these equations, the target groundwater concentration for benzene is 1.36 ug/L (for a cancer risk of $1\text{E-}06$). The target concentrations in groundwater from EPA (2002) and EPA Region I are compared with the maximum concentration in groundwater in Table 1 below.

As shown in the table, the only chemical which exceeded the risk-based target concentration was benzene, which occurred at a maximum concentration of 8 ug/l. This concentration is about 5.9 times

higher than the target level, equating to a potential cancer risk of about 6E-06 (i.e. $8E-06/1.36E-06 = 5.9E-06$). The cancer risk of 6E-06 is within EPA's acceptable risk range of 1E-04 to 1E-06 so the hypothetical vapor intrusion risk would be acceptable, if buildings occurred or potentially occurred above the location where the maximum benzene concentration was measured. Although the target concentration of 1.36 ug/L was exceeded, the groundwater plume is more than 100 feet horizontally from any structure. According to the 2002 EPA draft guidance, vapor intrusion is not of concern if a structure is 100 feet or more distant, either horizontally or vertically, from contaminated groundwater. In addition, the existing plume is not expanding in the direction of any structures or non-wetland areas where structures could be built in the future. Therefore, it is concluded that there is no current or potential future vapor intrusion risk associated with the Site.

APPENDIX L - ARARs & TBCs

APPENDIX L - ARARs & TBCs

DRAFT

Attachment 2 - Coakley Landfill Superfund Site, Operable Unit 1 Chemical-specific ARARs

Requirement	Status	Requirement Synopsis	Action to be Taken to Attain ARAR
EPA Risk Reference Dose (RfDs)	To Be Considered	RfDs are considered to be the levels unlikely to cause significant adverse health effects associated with a threshold mechanism of action in human exposure for a lifetime.	Hazards due to noncarcinogens with EPA RfDs are used to evaluate exposures to contaminated media. The source control remedy prevents exposure and migration of contaminants. Use restrictions on the landfill and other remedial components, as well as groundwater use restrictions will be maintained until risks identified under these standards are eliminated.
EPA Carcinogenicity Slope Factor	To Be Considered	Slope factors are developed by EPA from Health Effects Assessments and present the most up-to-date information on cancer risk potency. Slope factors are developed by EPA from Health Effects Assessments by the Carcinogenic Assessment Group.	Risks due to carcinogens as assessed with slope factors are used to evaluate exposures to contaminated media. The source control remedy prevents exposure and migration of contaminants. Use restrictions on the landfill and other remedial components, as well as groundwater use restrictions will be maintained until risks identified under these standards are eliminated.
Guidelines for Carcinogen Risk Assessment EPA/630/P-03/001F (March 2005)	To Be Considered	Guidance for assessing cancer risk.	Risks due to carcinogens are assessed using these guidelines. The source control remedy prevents exposure and migration of contaminants. Use restrictions on the landfill and other remedial components, as well as groundwater use restrictions will be maintained until risks identified under these standards are eliminated.
Supplemental Guidance for Assessing Susceptibility from Early-Life Exposure to Carcinogens EPA/630/R-03/003F (March 2005)	To Be Considered	Guidance of assessing cancer risks to children.	Risks to children due to carcinogens are assessed using these guidelines. The source control remedy prevents exposure and migration of contaminants. Use restrictions on the landfill and other remedial components, as well as groundwater use restrictions will be maintained until risks identified under these standards are eliminated.

Attachment 2 - Coakley Landfill Superfund Site, Operable Unit 1 Chemical-specific ARARs

Requirement	Status	Requirement Synopsis	Action to be Taken to Attain ARAR
Health Advisories (EPA Office of Drinking Water)	To Be Considered	Health Advisories are estimates of risk due to consumption of contaminated drinking water; they consider non-carcinogenic effects only. To be considered for contaminants in groundwater that may be used for drinking water where the standard is more conservative than either federal or state statutory or regulatory standards. The Health Advisory standard for manganese is 0.3 mg/l.	Health advisories will be used to evaluate the non-carcinogenic risk resulting from exposure to certain compounds (e.g., manganese). The source control remedy prevents exposure and migration of contaminants. Use restrictions on the landfill and other remedial components, as well as groundwater use restrictions will be maintained until risks identified under these standards are eliminated.
Soil Remediation Criteria, Env-Or 606.19	Applicable	Numeric soil remediation standards for organic and inorganic contaminants are established, with a provision for development of risk-based site-specific soil remediation standards.	Risks posed by contaminated soils and debris under the landfill cover will be controlled through operation and maintenance of the cap and institutional controls
New Hampshire Department of Environmental Services Risk Characterization and Management Policy (Section 7.4(5))	To be Considered	Establishes GW-1 and GW-2 guidelines for contaminants in groundwater. GW-1 values are equal to the NH AGQS values for ambient groundwater. GW-2 values are based on a subsurface vapor intrusion into buildings to calculate indoor air conservative risk assessments, and therefore apply to volatile contaminants only.	Risks due to groundwater contaminants are assessed using these guidelines. The source control remedy prevents exposure and migration of contaminants. Use restrictions on the landfill and other remedial components, as well as groundwater use restrictions will be maintained until risks identified under these standards are eliminated.

Attachment 2 - Coakley Landfill Superfund Site, Operable Unit 1
Location-specific ARARs

Authority	Requirements	Status	Requirement Synopsis	Action to be Taken to Attain ARAR
Federal Requirements	Fish and Wildlife Coordination Act (16 U.S.C.. §661 <i>et seq.</i>); Fish and Wildlife Protection (40 C.F.R. §6.302(g))	Applicable	Any modification of a body of water or wetland requires consultation with the U.S. Fish and Wildlife Service and the appropriate state wildlife agency to develop measures to prevent, mitigate, or compensate for losses of fish and wildlife.	Wetlands are in close proximity to OU 1 where the landfill cap has been constructed. Operation and maintenance of the remedy may have some limited impacts to fish and wildlife resource areas. Planning and decision making will incorporate fish and wildlife protection considerations in consultation with the resource agencies.
	Protection of Wetlands (40 C.F.R. § 6.302(a); Appendix A)	Applicable	This regulation codifies standards established under Executive Order 11990. Under this requirement, no activity that adversely affects a federal jurisdictional wetland shall be permitted if a practicable alternative with lesser effects is available. Action to avoid, whenever possible, the long- and short-term impacts on wetlands and to preserve and enhance wetlands.	Wetlands are in close proximity to OU 1 where the landfill cap has been constructed. Operation and maintenance of the remedy, along with monitoring activities may have some limited impacts to Federal jurisdictional wetlands. Wetlands disturbed by well installation, landfill cap operation and maintenance, monitoring, or other remedial activities will be mitigated in accordance with requirements.
	Clean Water Act, Section 404 (33 U.S.C.. § 1344); Section 404(b)(1) Guidelines for Specification of Disposal Sites for Dredged or Fill Material (40 C.F.R. Part 230, 231 and 33 C.F.R. Parts 320-323)	Applicable	Under this requirement, no activity that adversely affects a federal jurisdictional wetland shall be permitted if a practicable alternative with lesser effects is available. Controls discharges of dredged or fill material to protect aquatic ecosystems.	Operation and maintenance, along with monitoring activities that require activity in wetlands will be implemented to meet these requirements. EPA has determined that this alternative is the least damaging practicable alternative to protect wetland resources both on-site and off-site. At the time of the issuance of the ROD there was no public opposition to this finding.

Attachment 2 - Coakley Landfill Superfund Site, Operable Unit 1
Location-specific ARARs

Authority	Requirements	Status	Requirement Synopsis	Action to be Taken to Attain ARAR
State Requirements	Criteria and Conditions for Fill and Dredge In Wetlands: RSA Ch. 482-A and NH Admin. Code Env-Wt Parts 300, 400, 600, and 700	Applicable	These standards regulate filling and other activities in or adjacent to wetlands, and establish criteria for the protection of wetlands from adverse impacts on fish, wildlife, commerce, and public recreation.	Wetlands are in close proximity to OU 1 where the landfill cap has been constructed. Operation and maintenance of the remedy, along with monitoring activities may have some limited impacts to State jurisdictional wetlands. Wetlands disturbed by well installation, landfill cap operation and maintenance, monitoring, or other remedial activities will be mitigated in accordance with requirements.
	Terrain alteration adjacent to surface waters; Env-Ws 415 and RSA 485-A:17	Relevant and Appropriate	The purpose of these rules is to protect surface water quality from degradation resulting from any activity which significantly alters terrain or occurs in or on the border of the surface waters of the state. The permanent methods for protecting water quality described include: vegetated filter strips, grassed swales, detention ponds, wet ponds, constructed wetlands, infiltration trenches, infiltration basins and water quality inlets.	Activities performed in association with the implementation of the remedy, including operation and maintenance of the landfill cap, along with monitoring, will be compliant with these standards and will result in the least adverse impact to surface waters/wetlands. Engineering controls (e.g. siltation controls, erosion controls) will be implemented during remedial activities to minimize harm to surface waters/wetlands. Excavated material, including well drillings, will be stockpiled and dewatered outside of wetland areas prior to off Site disposal. Wetlands would be restored (using suitable soil and vegetation) where altered temporarily by the remedy.

Attachment 2 - Coakley Landfill Superfund Site, Operable Unit 1 Action-specific ARARs

Authority	Requirement	Status	Requirement Synopsis	Action to be Taken to Attain ARAR
Federal Requirements	Resource Conservation and Recovery Act (RCRA), 42 U.S.C.. §§ 6901 <i>et seq.</i> , Standards for identification and listing of hazardous waste, 40 C.F.R. Part 261	Applicable	New Hampshire has been delegated the authority to administer these RCRA standards through its state hazardous waste management regulations (Env-Wm 400). These provisions have been adopted by the State.	Any wastes generated by remedial activity will be analyzed by appropriate test methods. If found to be hazardous wastes, then they will be managed in accordance with the substantive requirements of the State hazardous waste regulations. Wastes that may be generated include: investigation derived waste from monitoring activities and contaminated media produced during the operation and maintenance of the landfill cap and other components of the remedy.
	RCRA, Standards applicable to generators of hazardous wastes, 40 C.F.R. Part 262	Applicable	New Hampshire has been delegated the authority to administer these RCRA standards through its state hazardous waste management regulations (Env-Wm 500). These provisions have been adopted by the State.	If remedial activity generates hazardous wastes, then they will be managed in accordance with the substantive requirements of the State hazardous waste regulations.
	RCRA, Standards for owners and operators of hazardous waste treatment, storage, and disposal facilities, 40 C.F.R. Part 264	Applicable	New Hampshire has been delegated the authority to administer these RCRA standards through its state hazardous waste management regulations (Env-Wm 700).	The Site's landfill meets regulatory standards to be a hazardous waste facility. Therefore, it will be operated and maintained in compliance with the substantive requirements of the State hazardous waste regulations.
	Clean Water Act (CWA), Section 402, 33 U.S.C. § 1342; 40 C.F.R.. 122-124, 131, 136 - Discharge of Pollutants	Applicable	These standards address water discharges which may be directed to surface water.	If a discharge from the remedial action is directed to surface water the discharge will be treated, if necessary, so that these standards will be achieved. Monitoring will be performed to determine whether operation and maintenance of the remedy could potentially affect nearby surface water bodies, in accordance with Env-Or-607 (see below).

Attachment 2 - Coakley Landfill Superfund Site, Operable Unit 1 Action-specific ARARs

Authority	Requirement	Status	Requirement Synopsis	Action to be Taken to Attain ARAR
	CWA, Ambient Water Quality Criteria (AWQC), 40 C.F.R. 122.44	Relevant and Appropriate	These regulations establish water quality standards for protection of human health and aquatic life.	Used to establish monitoring standards for surface waters and sediments. Surface water and sediment will be monitored annually to determine whether this alternative is effective in protecting areas outside of OU 1 from the migration of contaminants from the landfill.
	Safe Drinking Water Act (42 U.S.C. §300f <i>et seq.</i>); National primary drinking water regulations (40 C.F.R. 141, Subpart B and G)	Relevant and Appropriate	Establishes maximum contaminant levels (MCLs) for common organic and inorganic contaminants applicable to public drinking water supplies. Used as relevant and appropriate monitoring standards for aquifers and surface water bodies that are potential drinking water sources.	Used to establish monitoring standards for groundwater. The source control (landfill cap) remedy will be operated and maintained to prevent migration of contaminants outside of the compliance boundary established as OU 1. Long-term monitoring of contaminants, based on these standards, will be performed to evaluate whether the source control remedy is effective in preventing the migration of contaminants.
	Safe Drinking Water Act (42 U.S.C. §300f <i>et seq.</i>); National primary drinking water regulations (40 C.F.R. 141, Subpart F)	Relevant and Appropriate for non-zero MCLGs only; MCLGs set as zero are To Be Considered.	Establishes maximum contaminant level goals (MCLGs) for public water supplies. MCLGs are health goals for drinking water sources. These unenforceable health goals are available for a number of organic and inorganic compounds.	Used to establish monitoring standards for groundwater. The source control (landfill cap) remedy will be operated and maintained to prevent migration of contaminants outside of the compliance boundary established as OU 1. Long-term monitoring, utilizing these standards, will be performed to evaluate whether the source control remedy is effective in preventing the migration of contaminants. Non-zero MCLGs are relevant and appropriate. MCLGs set at zero are to be considered.

Attachment 2 - Coakley Landfill Superfund Site, Operable Unit 1 Action-specific ARARs

Authority	Requirement	Status	Requirement Synopsis	Action to be Taken to Attain ARAR
State Requirements	Contaminated Site Management, NH Admin. Code Env-Or 600: Part 607, Groundwater Management Permits; Part 608, Activity and Use Restrictions; Part 610, Monitoring; Part 611, Contaminated Soils	Applicable	Env-Or Part 607 provides for establishment of Groundwater Management Zones (GMZ) to control use of groundwater that exceeds AGQS, requires monitoring of the groundwater quality within the GMZ, requires implementation of measures to restore the groundwater quality, and requires an evaluation of the effectiveness of the measures. Part 608 establishes standards for setting institutional controls to protect human health and components of the remedy. Part 610 establishes standards for monitoring groundwater, including requirements and criteria for constructing, developing, and decommissioning monitoring wells. Part 611 establishes standards for managing contaminated soils.	A GMZ will be established for OU 1 to protect against use of contaminated groundwater. Note that even if compliance with these standards is achieved, groundwater use restrictions may still be required for the remedy if there are more stringent federal compliance standards that still have not been achieved. Activity and use restrictions will be established to prevent human exposure to contaminated groundwater and protect components of the remedy. Groundwater monitoring will be required until State groundwater standards are achieved throughout the GMZ (monitoring will be continued if additional Federal groundwater standards still need to be achieved). Groundwater monitoring wells will be installed, operated, and decommissioned under these standards. Contaminated soils generated from installation of wells, operation and maintenance of the landfill cap, and any other remedial activity will be managed in compliance with these standards.
	Identification and Listing of Hazardous Wastes, N.H.. Admin. Code Env-Wm 400, Toxicity Characteristic	Applicable	These standards list particular hazardous wastes and identify the maximum concentration of contaminants for which the waste would be a RCRA characteristic waste. The analytical test set out in Appendix II of 40 C.F.R.. Part 261 is referred to as the Toxicity Characteristic Leaching Procedure (TCLP). The federal requirements 40 C.F.R. Part 261 are incorporated by reference.	Any wastes generated by remedial activity will be analyzed to determine whether they are listed or characteristic hazardous waste under these standards. Materials that are listed waste or exceed TCLP hazardous waste thresholds will be disposed off-site in a RCRA Subtitle C facility. Non-hazardous materials will be disposed appropriately.

Attachment 2 - Coakley Landfill Superfund Site, Operable Unit 1 Action-specific ARARs

Authority	Requirement	Status	Requirement Synopsis	Action to be Taken to Attain ARAR
	Requirements for Hazardous Waste Generators, N.H. Admin. Code Env-Wm 500 [formerly He-P Ch. 1905.06]: including Part 507 Storage Requirements; Part 513 Emergency/Remedial Actions	Applicable	Requires determination as to whether waste materials are hazardous and, if so, requirements for managing such materials on site prior to shipment off site. The federal requirements 40 C.F.R. Part 262 are incorporated by reference.	If remedial activity generates hazardous wastes, then they will be managed in accordance with the substantive requirements of these regulations.
	Requirements for Owners and Operators of Hazardous Waste Facilities/Hazardous Waste Transfer Facilities, N.H.. Admin. Code Env-Wm 700 [formerly He-P Ch. 1905.08]: including § 702.10 Groundwater Monitoring; § 702.11, Other Monitoring; Part 706, Emergency/Remedial Actions; Part 708, Facility Standards	Applicable	This regulation establishes requirements for owners or operators of hazardous waste sites. Part 708 incorporates by reference the federal requirements under 40 C.F.R. Part 264, including but not limited to Subpart G (closure/post closure), Subpart I (containers), Subpart J (tanks)	The landfill meets regulatory standards to be a hazardous waste facility. Therefore, it will be operated and maintained in compliance with these standards.

Attachment 2 - Coakley Landfill Superfund Site, Operable Unit 1 Action-specific ARARs

Authority	Requirement	Status	Requirement Synopsis	Action to be Taken to Attain ARAR
	Rules Governing the Control of Air Pollution, RSA Ch. 125-C, Air Pollution Control; NH Admin. Code Env-A 100-4300	Applicable	These provisions establish standards for the release of air emissions, including VOCs and hazardous air pollutants. Applicable standards include the most stringent of the following requirements: (1) New Source Performance Standards, (40 C.F.R. Part 60); (2) National Emissions Standards for Hazardous Air Pollutants (40 C.F.R. Part 61); and (3) New Hampshire State Implementation Plan limits. See RSA 125-C:6.	If operation and maintenance actions, along with monitoring, causes a release of contaminants from groundwater to the unsaturated zone, emissions controls will be included in the remedial design to control emissions.
	Drinking Water Quality Standards: NH Admin. Code Env-Ws 314 MCLs and MCLGs for Inorganics; NH Admin. Code Env-Ws 315 MCLs and MCLGs for Regulated Organics	Relevant and Appropriate for MCLs and non-zero MCLGs only; MCLGs set as zero are To Be Considered.	State MCLs and MCLGs establish maximum contaminant levels permitted in public water supplies and are the basis of State Ambient Groundwater Quality Standards (AGQS) that are applicable to site ground water. The regulations are generally equivalent to the Federal Safe Drinking Water Act (SDWA).	Used to establish monitoring standards for groundwater. The source control (landfill cap) remedy will be operated and maintained to prevent migration of contaminants outside of the compliance boundary established as OU 1. Long-term monitoring of contaminants, based on these standards, will be performed to evaluate whether the source control remedy is effective in preventing the migration of contaminants.
	New Hampshire Ambient Groundwater Quality Standards (NH AGQS) (Env-Or 603.03, Table 600-1).	Relevant and Appropriate	Establishes maximum concentration levels for regulated contaminants in groundwater which result from human operations or activities. NH AGQS are equivalent to MCLs for contaminants that have MCLs. NH AGQS have been established for site groundwater contaminants for which no MCLs are established, and are derived to be protective for drinking water uses. The NH AGQS will be used for site contaminants where MCLs are not currently established.	Used to establish monitoring standards for groundwater. The source control (landfill cap) remedy will be operated and maintained to prevent migration of contaminants outside of the compliance boundary established as OU 1. Long-term monitoring of contaminants, based on these standards, will be performed to evaluate whether the source control remedy is effective in preventing the migration of contaminants.

Attachment 2 - Coakley Landfill Superfund Site, Operable Unit 1 Action-specific ARARs

Authority	Requirement	Status	Requirement Synopsis	Action to be Taken to Attain ARAR
	Groundwater Protection Standards: NH Admin. Code Env-Or 603.01(a) and (b)	Applicable	Wm-Or 603.01(a) and (b) provide that groundwater shall be suitable for use as drinking water without treatment and shall not contain any regulated contaminant in concentrations greater than ambient groundwater quality standards established in Env-Or 603.03.	Used to establish monitoring standards for groundwater. The source control (landfill cap) remedy will be operated and maintained to prevent migration of contaminants outside of the compliance boundary established as OU 1. Long-term monitoring of contaminants, based on these standards, will be performed to evaluate whether the source control remedy is effective in preventing the migration of contaminants.
	Nondegradation of Groundwater to Protect Surface Water: NH Admin. Code Env-Or 603.01 (c)	Applicable	Wm-Or 603.01(c) provides that, unless naturally occurring, groundwater shall not contain any contaminants at concentrations such that groundwater to surface water results in a violation of surface water standards in any surface water body within or adjacent to the site. Env-Or 603.01 (c) therefore incorporates surface water standards set forth at Env-Ws 1700.	Used to establish monitoring standards for groundwater. The source control (landfill cap) remedy will be operated and maintained to prevent migration of contaminants outside of the compliance boundary established as OU 1. Long-term monitoring of contaminants, based on these standards, will be performed to evaluate whether the source control remedy is effective in preventing the migration of contaminants.
	Ambient Air Quality Standards, NH Admin. Code Env-A 300	Applicable	These regulations set primary and secondary ambient air quality standards (equivalent to federal standards). The standards do not allow significant deterioration of existing air quality in any portion of the state for: particulate matter, sulfur dioxide, carbon monoxide, nitrogen dioxide, ozone hydrocarbons and lead.	If there are remedial processes that result in releases of contaminants into the air, air quality standards will be complied with during remedial activities.
	Fugitive Dust, N.H.. Admin. Code Env-A Part 1002	Applicable	Requires precautions to prevent, abate and control fugitive dust during specified activities, including excavation, maintenance, and construction.	Precautions to control fugitive dust emissions will be required during site remediation activities that could generate dust, such as maintenance of the landfill cap and monitoring well installation.

Attachment 2 - Coakley Landfill Superfund Site, Operable Unit 1 Action-specific ARARs

Authority	Requirement	Status	Requirement Synopsis	Action to be Taken to Attain ARAR
	Regulated Toxic Air Pollutants, NH Admin. Code Env-A Part 1400	Applicable	This regulation identifies toxic air pollutants to be regulated. These pollutants are also listed by EPA in 40 CFR 261. High, moderate and low Toxicity Classifications are established. Air toxics in these classifications are regulated when they occur in concentrations that cause adverse health effects including increased cancer risk.	If there are remedial processes that result in releases of contaminants into the air, air quality standards will be complied with during remedial activities.
	Surface Water Quality Regulations, NH Admin. Code Env-Ws 1700	Applicable	These rules establish water quality standards for the state's surface waters. Water quality criteria for toxic substances are established. [See Part Env-Ws 1703 Water Quality Standards and Env-Ws 1704 Alternative Site Specific Criteria]. These rules are applicable to point or non-point discharge(s) of pollutants to surface waters.	Standards will be used for monitoring to measure the performance and effectiveness of the remedial action in preventing contaminated groundwater from degrading nearby surface waters.
	Interim Criteria for Groundwater Discharges: NH Admin. Code Env-Ws 1500	Applicable	These regulations establish substantive requirements for discharges to groundwater, including prohibited discharges (Env-Ws 1503.04), compliance criteria (Env-Ws 1504.03), and water quality sampling (Env-Ws 1507.01).	If the operation and maintenance of the landfill cover or the monitoring system requires discharge to groundwater, these standards will be complied with.
	Management of Contaminated Soil, NH Admin. Code Env-Or 611	Applicable	Establishes requirements for managing contaminated soils, including requirements for sampling and analysis of soil destined for off-site treatment or disposal, storage requirements for stockpiled soil, and disposal requirements.	Any remedial activities on the site that generates and stockpiles contaminated soil requiring on-site management or off-site disposal will comply with these requirements. Minimal soil generation is anticipated from the installation of monitoring wells and the operation and maintenance of the landfill cap.

Attachment 2 - Coakley Landfill Superfund Site, Operable Unit 1 Action-specific ARARs

Authority	Requirement	Status	Requirement Synopsis	Action to be Taken to Attain ARAR
	Standards for Construction, Maintenance and Abandonment of Wells, NH Admin. Code Env-We 600	Applicable	This provision requires that wells be constructed, maintained, relocated, and/or abandoned according to these regulations.	Wells used for the remedy will be created, operated, and closed in compliance with these standards.

Authority	Requirement	Status	Requirement Synopsis	Action to be Taken to Attain ARAR
Federal Requirements	Safe Drinking Water Act (42 U.S.C. §300f <i>et seq.</i>); National primary drinking water regulations (40 C.F.R. 141, Subpart B and G)	Relevant and Appropriate	Establishes maximum contaminant levels (MCLs) for common organic and inorganic contaminants applicable to public drinking water supplies. Used as relevant and appropriate cleanup standards for aquifers and surface water bodies that are potential drinking water sources.	Used to establish cleanup standards for groundwater. Long-term monitoring of contaminants, based on these standards, will be performed to evaluate whether the natural attenuation remedy is effective in preventing the migration of contaminants and achieving drinking water standards.
	Safe Drinking Water Act (42 U.S.C. §300f <i>et seq.</i>); National primary drinking water regulations (40 C.F.R. 141, Subpart F)	Relevant and Appropriate for non-zero MCLGs only; MCLGs set as zero are To Be Considered	Establishes maximum contaminant level goals (MCLGs) for public water supplies. MCLGs are health goals for drinking water sources. These unenforceable health goals are available for a number of organic and inorganic compounds.	Used to establish cleanup standards for groundwater. Long-term monitoring of contaminants, based on these standards, will be performed to evaluate whether the natural attenuation remedy is effective in preventing the migration of contaminants and achieving drinking water standards. Non-zero MCLGs are relevant and appropriate. MCLGs set at zero are to be considered.
Federal Criteria, Advisories, and Guidance	EPA Risk Reference Dose (RfDs)	To Be Considered	RfDs are considered to be the levels unlikely to cause significant adverse health effects associated with a threshold mechanism of action in human exposure for a lifetime.	Hazards due to noncarcinogens with EPA RfDs are used to evaluate exposures to contaminated media. The remedy prevents exposure to contaminants through institutional controls and monitoring of the natural attenuation process. Groundwater use restrictions will be maintained until risks identified under these standards are eliminated.

**Attachment 2 - Coakley Landfill Superfund Site,
Operable Unit 2
Chemical-specific ARARs**

Authority	Requirement	Status	Requirement Synopsis	Action to be Taken to Attain ARAR
	EPA Carcinogenicity Slope Factor	To Be Considered	Slope factors are developed by EPA from Health Effects Assessments and present the most up-to-date information on cancer risk potency. Slope factors are developed by EPA from Health Effects Assessments by the Carcinogenic Assessment Group.	Risks due to carcinogens as assessed with slope factors are used to evaluate exposures to contaminated media. The remedy prevents exposure to contaminants through institutional controls and monitoring of the natural attenuation process. Use restrictions will be maintained until risks identified under these standards are eliminated.
	Guidelines for Carcinogen Risk Assessment EPA/630/P-03/001F (March 2005)	To Be Considered	Guidance for assessing cancer risk.	Risks due to carcinogens are assessed using these guidelines. The remedy prevents exposure to contaminants through institutional controls and monitoring of the natural attenuation process. Use restrictions will be maintained until risks identified under these standards are eliminated.
	Supplemental Guidance for Assessing Susceptibility from Early-Life Exposure to Carcinogens EPA/630/R-03/003F (March 2005)	To Be Considered	Guidance of assessing cancer risks to children.	Risks to children due to carcinogens are assessed using these guidelines. The remedy prevents exposure to contaminants through institutional controls and monitoring of the natural attenuation process. Use restrictions will be maintained until risks identified under these standards are eliminated.

Operable Unit 2
Chemical-specific ARARs**

Authority	Requirement	Status	Requirement Synopsis	Action to be Taken to Attain ARAR
	Health Advisories (EPA Office of Drinking Water)	To Be Considered	Health Advisories are estimates of risk due to consumption of contaminated drinking water; they consider non-carcinogenic effects only. To be considered for contaminants in groundwater that may be used for drinking water where the standard is more conservative than either federal or state statutory or regulatory standards. The Health Advisory standard for manganese is 0.3 mg/l.	Health advisories will be used to evaluate the non-carcinogenic risk resulting from exposure to certain compounds (e.g., manganese). The remedy prevents exposure to contaminants though institutional controls and monitoring of the natural attenuation process. Use restrictions will be maintained until risks identified under these standards are eliminated.
State Requirements	Drinking Water Quality Standards: NH Admin. Code Env-Ws 314 MCLs and MCLGs for Inorganics; NH Admin. Code Env-Ws 315 MCLs and MCLGs for Regulated Organics	Relevant and Appropriate for MCLs and non-zero MCLGs only; MCLGs set as zero are To Be Considered	State MCLs and MCLGs establish maximum contaminant levels permitted in public water supplies and are the basis of State Ambient Groundwater Quality Standards (AGQS) that are applicable to site groundwater. The regulations are generally equivalent to the Federal Safe Drinking Water Act (SDWA).	Used to establish cleanup standards for groundwater. Long-term monitoring of contaminants, based on these standards, will be performed to evaluate whether the natural attenuation remedy is effective in preventing the migration of contaminants and achieving drinking water standards.

Authority	Requirement	Status	Requirement Synopsis	Action to be Taken to Attain ARAR
	Nondegradation of Groundwater to Protect Surface Water: NH Admin. Code Env-Or 603.01(c)	Applicable	Wm-Or 603.01(c) provides that, unless naturally occurring, groundwater shall not contain any contaminants at concentrations such that groundwater to surface water results in a violation of surface water standards in any surface water body within or adjacent to the site. Env-Or 603.01 (c) therefore incorporates surface water standards set forth at Env-Ws 1700.	Used to establish cleanup standards for groundwater. Long-term monitoring of contaminants, based on these standards, will be performed to evaluate whether the natural attenuation remedy is effective in preventing the migration of contaminants and achieving drinking water standards.
State Criteria, Advisories, and Guidance	New Hampshire Department of Environmental Services Risk Characterization and Management Policy (Section 7.4(5))	To be Considered	Establishes GW-1 and GW-2 guidelines for contaminants in groundwater. GW-1 values are equal to the NH AGQS values for ambient groundwater. GW-2 values are based on a subsurface vapor intrusion into buildings to calculate indoor air conservative risk assessments, and therefore apply to volatile contaminants only.	Risks due to groundwater contaminants are assessed using these guidelines. The remedy prevents exposure to contaminants through institutional controls and monitoring of the natural attenuation process. Use restrictions will be maintained until risks identified under these standards are eliminated.

Authority	Requirements	Status	Requirement Synopsis	Action to be Taken to Attain ARAR
Federal Requirements	Fish and Wildlife Coordination Act (16 U.S.C.. §661 <i>et seq.</i>); Fish and Wildlife Protection (40 C.F.R. §6.302(g))	Applicable	Any modification of a body of water or wetland requires consultation with the U.S. Fish and Wildlife Service and the appropriate state wildlife agency to develop measures to prevent, mitigate, or compensate for losses of fish and wildlife.	Wetlands are present in OU 2 adjacent to monitoring wells. Operation and maintenance of the remedy may have some limited impacts to fish and wildlife resource areas. Planning and decision-making will incorporate fish and wildlife protection considerations in consultation with the resource agencies.
	Floodplain Management (40 C.F.R. 6.302(b); Appendix A)	Applicable	This regulation codifies standards established under Executive Order 11988. Action to avoid, whenever possible, the long- and short-term impacts associated with the occupancy and modifications of floodplains development, wherever there is a practical alternative. Promotes the preservation and restoration of floodplains so that their natural and beneficial value can be realized.	Portions of the area of OU 2 are within the 100 year floodplain. Remedial actions that involve construction in the floodplain areas, other than the potential installation of additional monitoring wells, are not anticipated. If such actions are later found to be necessary, the remedial design will include all practicable means to minimize harm to and preserve beneficial values of the floodplains. Floodplains disturbed by remedial actions will be restored to their original conditions and utility.

Authority	Requirements	Status	Requirement Synopsis	Action to be Taken to Attain ARAR
	Protection of Wetlands (40 C.F.R. § 6.302(a); Appendix A)	Applicable	This regulation codifies standards established under Executive Order 11990. Under this requirement, no activity that adversely affects a federal jurisdictional wetland shall be permitted if a practicable alternative with lesser effects is available. Action to avoid, whenever possible, the long- and short-term impacts on wetlands and to preserve and enhance wetlands.	Wetlands are present within OU 2. Operation and maintenance of the remedy may have some limited impacts to Federal jurisdictional wetlands. Wetlands disturbed by well installation, monitoring, or other remedial activities will be mitigated in accordance with requirements.
	Clean Water Act, Section 404 (33 U.S.C. § 1344); Section 404(b)(1) Guidelines for Specification of Disposal Sites for Dredged or Fill Material (40 C.F.R. Part 230, 231 and 33 C.F.R. Parts 320-323)	Applicable	Under this requirement, no activity that adversely affects a federal jurisdictional wetland shall be permitted if a practicable alternative with lesser effects is available. Controls discharges of dredged or fill material to protect aquatic ecosystems.	Wetlands are present within OU 2. Operation and maintenance of the remedy may have some limited impacts to Federal jurisdictional wetlands. Wetlands disturbed by well installation, monitoring, or other remedial activities will be mitigated in accordance with requirements. EPA has determined that this alternative is the least damaging practicable alternative to protect wetland resources both on-site and off-site. At the time of the issuance of the ROD there was no public opposition to this finding.

**Attachment 2 - Coakley Landfill Superfund Site,
Operable Unit 2

Authority	Requirements	Status	Requirement Synopsis	Action to be Taken to Attain ARAR
State Requirements	Criteria and Conditions for Fill and Dredge In Wetlands: RSA Ch. 482-A and NH Admin. Code Env-Wt Parts 300 400, 600, and 700	Applicable	These standards regulate filling and other activities in or adjacent to wetlands, and establish criteria for the protection of wetlands from adverse impacts on fish, wildlife, commerce, and public recreation.	Wetlands are present within OU 2. Operation and maintenance of the remedy may have some limited impacts to State jurisdictional wetlands. Wetlands disturbed by well installation, monitoring, or other remedial activities will be mitigated in accordance with requirements.
	Native Plant Protection Act; RSA 217A and Res 1100-1108	Applicable	Prohibits damaging plant species listed as endangered within the State.	Listed plant species will be identified and remedial activities will comply with these standards.
	Terrain alteration adjacent to surface waters; Env-Ws 415 and RSA 485-A:17	Relevant and Appropriate	The purpose of these rules is to protect surface water quality from degradation resulting from any activity which significantly alters terrain or occurs in or on the border of the surface waters of the state. The permanent methods for protecting water quality described include: vegetated filter strips, grassed swales, detention ponds, wet ponds, constructed wetlands, infiltration trenches, infiltration basins and water quality inlets.	Activities performed in association with the implementation of the remedy, including groundwater monitoring, will be compliant with these standards and will result in the least adverse impact to surface waters/wetlands. Engineering controls (e.g. siltation controls, erosion controls) will be implemented during remedial activities to minimize harm to surface waters/wetlands. Excavated material, including well drillings, will be stockpiled and dewatered outside of wetland areas prior to off site disposal. Wetlands would be restored (using suitable soil and vegetation) where altered temporarily by the remedy.

Federal Requirements	Resource Conservation and Recovery Act (RCRA), 42 U.S.C. §§ 6901 <i>et seq.</i> , Standards for identification and listing of hazardous waste, 40 C.F.R. Part 261	Applicable	New Hampshire has been delegated the authority to administer these RCRA standards through its state hazardous waste management regulations (Env-Wm 400). These provisions have been adopted by the State.	Any wastes generated by remedial activity will be analyzed by appropriate test methods. If found to be hazardous wastes, then they will be managed in accordance with the substantive requirements of the State hazardous waste regulations. Wastes that may be generated include investigation derived waste from monitoring activities and contaminated media produced during the operation and maintenance of other components of the remedy.
	RCRA, Standards applicable to generators of hazardous wastes, 40 C.F.R. Part 262	Applicable	New Hampshire has been delegated the authority to administer these RCRA standards through its state hazardous waste management regulations (Env-Wm 500). These provisions have been adopted by the State.	If remedial activity generates hazardous wastes, then they will be managed in accordance with the substantive requirements of the State hazardous waste regulations.
	RCRA, Standards for owners and operators of hazardous waste treatment, storage, and disposal facilities, 40 C.F.R. Part 264	Applicable	New Hampshire has been delegated the authority to administer these RCRA standards through its state hazardous waste management regulations (Env-Wm 700).	If any hazardous waste is generated from remedial activities it will be treated, stored, and disposed of under these standards.

Operable Unit 2
Action-specific ARARs**

Authority	Requirement	Status	Requirement Synopsis	Action to be Taken to Attain ARAR
	Clean Water Act (CWA), Section 402, 33 U.S.C. § 1342; 40 C.F.R.. 122-124, 131, 136 - Discharge of Pollutants	Applicable	These standards address water discharges which may be directed to surface water.	If a discharge from the remedial action is directed to surface water the discharge will be treated, if necessary, so that these standards will be achieved. Monitoring will be performed to determine whether operation and maintenance of the remedy could potentially affect nearby surface water bodies, in accordance with Env-Or-607 (see below).
	CWA, Ambient Water Quality Criteria (AWQC), 40 C.F.R. 122.44	Relevant and Appropriate	These regulations establish water quality standards for protection of human health and aquatic life.	Used to establish monitoring standards for surface waters and sediments. Surface water and sediment will be monitored annually to determine whether this alternative is effective in protecting areas from the migration of contaminants from the landfill.

Authority	Requirement	Status	Requirement Synopsis	Action to be Taken to Attain ARAR
State Requirements	Contaminated Site Management, NH Admin. Code Env-Or 600: Part 607, Groundwater Management Permits; Part 608, Activity and Use Restrictions; Part 610, Monitoring; Part 611, Contaminated Soils	Applicable	Env-Or Part 607 provides for establishment of Groundwater Management Zones (GMZ) to control use of groundwater that exceeds AGQS, requires monitoring of the groundwater quality within the GMZ, requires implementation of measures to restore the groundwater quality, and requires an evaluation of the effectiveness of the measures. Part 608 establishes standards for setting institutional controls to protect human health and components of the remedy. Part 610 establishes standards for monitoring groundwater, including requirements and criteria for constructing, developing, and decommissioning monitoring wells. Part 611 establishes standards for managing contaminated soils.	A GMZ will be established for OU 2 to protect against use of contaminated groundwater. Note that even if compliance with these standards is achieved, groundwater use restrictions may still be required for the remedy if there are more stringent federal compliance standards that still have not been achieved. Activity and use restrictions will be established to prevent human exposure to contaminated groundwater and protect components of the remedy. Groundwater monitoring will be required until State groundwater standards are achieved throughout the GMZ (monitoring will be continued if additional Federal groundwater standards still need to be achieved). Groundwater monitoring wells will be installed, operated, and decommissioned under these standards. Contaminated soils generated from installation of wells and any other remedial activity will be managed in compliance with these standards.
	Identification and Listing of Hazardous Wastes, N.H. Admin. Code Env-Wm 400, Toxicity Characteristic	Applicable	These standards list particular hazardous wastes and identify the maximum concentration of contaminants for which the waste would be a RCRA characteristic waste. The analytical test set out in Appendix II of 40 C.F.R.. Part 261 is referred to as the Toxicity Characteristic Leaching Procedure (TCLP). The federal requirements 40 C.F.R. Part 261 are incorporated by reference.	Any wastes generated by remedial activity will be analyzed to determine whether they are listed or characteristic hazardous waste under these standards. Materials that are listed waste or exceed TCLP hazardous waste thresholds will be disposed off-site in a RCRA Subtitle C facility. Non-hazardous materials will be disposed appropriately.

Operable Unit 2
Action-specific ARARs**

Authority	Requirement	Status	Requirement Synopsis	Action to be Taken to Attain ARAR
	Requirements for Hazardous Waste Generators, N.H.. Admin. Code Env-Wm 500 [formerly He-P Ch. 1905.06]: including Part 507 Storage Requirements; Part 513 Emergency/Remedial Actions	Applicable	Requires determination as to whether waste materials are hazardous and, if so, requirements for managing such materials on site prior to shipment off site. The federal requirements 40 C.F.R. Part 262 are incorporated by reference.	If remedial activity generates hazardous wastes, then they will be managed in accordance with the substantive requirements of these regulations.
	Requirements for Owners and Operators of Hazardous Waste Facilities/Hazardous Waste Transfer Facilities, N.H. Admin. Code Env-Wm 700 [formerly He-P Ch. 1905.08]: including § 702.10 Groundwater Monitoring; § 702.11, Other Monitoring; Part 706, Emergency/Remedial Actions; Part 708, Facility Standards	Applicable	This regulation establishes requirements for owners or operators of hazardous waste sites. Part 708 incorporates by reference the federal requirements under 40 C.F.R. Part 264, including but not limited to Subpart G (closure/post closure), Subpart I (containers), Subpart J (tanks)	If any hazardous waste is generated from remedial activities it will be treated, stored, and disposed of under these standards.

**Attachment 2 - Coakley Landfill Superfund Site,
Operable Unit 2
Action-specific ARARs**

Authority	Requirement	Status	Requirement Synopsis	Action to be Taken to Attain ARAR
	Fugitive Dust, N.H. Admin. Code Env-A Part 1002	Applicable	Requires precautions to prevent, abate and control fugitive dust during specified activities, including excavation, maintenance, and construction.	Precautions to control fugitive dust emissions will be required during site remediation activities that could generate dust, such as maintenance of the landfill cap and monitoring well installation.
	Regulated Toxic Air Pollutants, NH Admin. Code Env-A Part 1400	Applicable	This regulation identifies toxic air pollutants to be regulated. These pollutants are also listed by EPA in 40 CFR 261. High, moderate and low Toxicity Classifications are established. Air toxics in these classifications are regulated when they occur in concentrations that cause adverse health effects including increased cancer risk.	If there are remedial processes that result in releases of contaminants into the air, air quality standards will be complied with during remedial activities.
	Surface Water Quality Regulations, NH Admin. Code Env-Ws 1700	Applicable	These rules establish water quality standards for the state's surface waters. Water quality criteria for toxic substances are established. [See Part Env-Ws 1703 Water Quality Standards and Env-Ws 1704 Alternative Site Specific Criteria]. These rules are applicable to point or non-point discharge(s) of pollutants to surface waters.	Standards will be used for monitoring to measure the performance and effectiveness of the remedial action in preventing contaminated groundwater from degrading nearby surface waters.
	Interim Criteria for Groundwater Discharges: NH Admin. Code Env-Ws 1500	Applicable	These regulations establish substantive requirements for discharges to groundwater, including prohibited discharges (Env-Ws 1503.04), compliance criteria (Env-Ws 1504.03), and water quality sampling (Env-Ws 1507.01).	If the operation and maintenance of the remedy requires discharge to groundwater, these standards will be complied with.

**Attachment 2 - Coakley Landfill Superfund Site,
Operable Unit 2
Action-specific ARARs**

Authority	Requirement	Status	Requirement Synopsis	Action to be Taken to Attain ARAR
	Management of Contaminated Soil, NH Admin. Code Env-Or 611	Applicable	Establishes requirements for managing contaminated soils, including requirements for sampling and analysis of soil destined for off-site treatment or disposal, storage requirements for stockpiled soil, and disposal requirements.	Any remedial activities on the site that generates and stockpiles contaminated soil requiring on-site management or off-site disposal will comply with these requirements. Minimal soil generation is anticipated from the installation of monitoring wells.
	Standards for Construction, Maintenance and Abandonment of Wells, NH Admin. Code Env-We 600	Applicable	This provision requires that wells be constructed, maintained, relocated, and/or abandoned according to these regulations.	Wells used for the remedy will be created, operated, and closed in compliance with these standards.

**SUBJECT: NORTH HAMPTON – Coakley Landfill, Breakfast Hill Road,
DES # 198712001, Project # 431**

Changes in Volatile Organic Sampling Requirements

SDMS DocID

452893

I am writing to summarize recent changes in sampling requirements at the Coakley Landfill and other Superfund sites in New Hampshire.

1. Analyses for the Waste Management Division's Full List of Analytes for Volatile Organic Compounds "WMD Full List" (attached) are required for all soil, groundwater and drinking water samples collected for hazardous waste sites, landfills and petroleum sites. The Department's January 30, 2008 correspondence to analytical laboratories and environmental professionals can be accessed at the following link.

http://des.nh.gov/organization/divisions/waste/hwrb/documents/voc_changes.pdf

2. At all Superfund Sites, wells regularly sampled for Volatile Organic Compounds (VOCs) need two consecutive rounds of the WMD Full List, and a subset of representative wells must be analyzed for 1,4-dioxane. Due to the high solubility and mobility of 1,4-dioxane in groundwater several wells should be selected in source areas with high VOC concentrations and a few wells should be selected at downgradient locations.
3. The Waste Management Division will consider reducing the requirement to test for some chemicals, including 1,4-dioxane, if two consecutive rounds of analyses fail to detect the chemicals above reporting limits. At a minimum the WMD Full List must be analyzed for once every five years on a schedule that allows the data to be included in the Five Year Review.
4. Not all labs who run 8260B routinely analyze for all the analytes in the WMD Full List. Therefore, it may be necessary to request that the lab(s) analyze for all the compounds, and to confirm that detection limits for the laboratory are low enough to determine if regulatory benchmarks have been exceeded.
5. Five compounds designated with an asterisk (*) in the WMD Full List, i.e., Bromodichloromethane, Hexachlorobutadiene, Ethylene dibromide (EDB), Dibromochloropropane, and 1,3-Dichloropropene (mixed isomers), have typical reporting limits using 8260B that are above the Department's Ambient Groundwater Quality Standards. If any of these five compounds are a concern at a site it may be necessary for the lab(s) to use a different analytical method.

Peter Britz
DES Site # 198712001
June 30, 2009
Page 2 of 2

6. The NHDES Lab uses Method 524 for Bromodichloromethane or Hexachlorobutadiene and Method 504 for Ethylene dibromide (EDB) or Dibromochloropropane. The 504 method could be used in place of both the 8260B and 524 methods to reach the lower reporting limits.

We appreciate your willingness to address environmental concerns at this site. Should you have any questions, please contact me at the Department's Waste Management Division at the letterhead address, by e-mail or by phone.

FIVE-YEAR REVIEW

FAMILY NOTICE

Judith Franzoso

DOVER — Judith (Demaris) Franzoso, 67, died Monday, Jan. 17, 2011. Judy was born March 4, 1943 in Haverhill, Mass., the daughter of Melvin and Eleanor (Hosford) Demaris. She graduated from Portsmouth High School, Class of 1961, and Colby Sawyer College, Class of 1963.

Judy was a familiar face along with her brother, Ric, for 14 years at E. Richard Ltd., dressing hundreds of clients in the finest men's and women's wear north of Boston. Judy also worked at the Portsmouth Visiting Nurses Association from 1993 through 2008.

She is survived by son Anthony Franzoso and his wife, Nicole, of Shrewsbury, Mass. and their children, Anthony, Matthew, Joseph and Gabrielle; son Christopher and his wife, Ann, of Hampton, and children Alexia, Benjamin, Zachary and Sydney; and son Michael Stephen and his daughters, Rio and Mira. She also is survived by her brother, Stephen Demaris of Hampton; and sister Melanie Demaris of Worcester, Mass. She was predeceased by her brother, Ric Demaris.

Judy's love of family grew during summers at local beaches, working at her family's restaurant, Flagstones, and remained strong through her hosting of Nana's Camp for her many grandchildren during the summers. She loved her family unconditionally and cherished the times they spent before and during her strong fight.

She enjoyed her life and many wonderful caring friends, including Gene and Colleen Franzoso, Barbara Smucker and Sally Bussiere, and especially her closest friend, Suzanne Bevers, whose love and support helped Judy and her family through this very challenging time.

Calling hours are from 2 to 5 p.m. Sunday, Jan. 23, 2011, at Farrell Funeral Home, 684 State St., Portsmouth, NH 03801; (603) 436-5418. Mass will be conducted at 11 a.m. Monday, Jan. 24, 2011, at Immaculate Conception Church, 98 Summer St., Portsmouth, NH 03801. In lieu of flowers, donations can be made to Seacoast Cancer Center at Wentworth-Douglass Hospital, 789 Central Ave., Dover, NH 03820.

HAMPTON POLICE LOG

Monday, Jan. 10

■ 1:22 a.m. — Melissa L. Coffey, 29, of Holliston, Mass., was charged with driving or operating under the influence of drugs or liquor, possession of drug paraphernalia and registered vehicle.

■ 9:09 a.m. — A 15-year-old juvenile was charged with possession of drug paraphernalia and violation of the controlled drug act.

■ 12:48 p.m. — Stephen Fraser, 39, of Hampton, was charged with driving after revocation or suspension.

Tuesday, Jan. 11

■ 9:38 a.m. — Lawrence F. McGovern Jr., 43, of Hampton,

was charged on arrest warrant, covering a warrant and being a fugitive from justice.

■ 7:53 p.m. — Steven Patten, 53, of Hampton, was charged with alcoholism and possession of a controlled narcotic drug.

Wednesday, Jan. 12

■ 2:21 a.m. — Joseph F. Piquette Jr., 29, was charged with simple assault.

Friday, Jan. 14

■ 5:34 p.m. — Donald J. Murphy, 39, of Seabrook, was charged with larceny and on an arrest warrant.

Saturday, Jan. 15

■ 1:12 a.m. — Charles R. Locke, 53, of Hampton, was charged with driving or operating under the influence of drugs or liquor.

TOWN OF NORTH HAMPTON
PLANNING BOARD
THURSDAY, FEBRUARY 3, 2011 AT 8:30PM
TOWN HALL, 231 ATLANTIC AVENUE

I. OLD BUSINESS

1. 111-01 — GZA GeoEnvironmental, Inc., 202 Kent Place, Newmarket, NH 03852. The Applicant requests a Conditional Use Permit under Article IV, Section 409.12 to allow the expansion of an existing structure located within the wetlands conservation district freshwater and tidal buffer zones. Property owner: Richard Clark; property location: 1 Appleton Avenue; MA, 001-022-000; zoning district: R-2. This case is continued from the January 13, 2011 Meeting.

II. NEW BUSINESS

1. 111-04 — Nancy Briggs and Joseph Guilmette, 67 Exeter Road, North Hampton, NH. The Applicants propose a change of use by relocating their existing business "Cust Cheeser's" ice cream, cheese and gift shop; also serving food, to 61 Lafayette Road, previously used as a "Gift Shop" business only. Property location: 61 Lafayette Road; property owners: Nancy Briggs and Joseph Guilmette; MA, 007-063-000; zoning district: I-B/R.

III. OTHER BUSINESS

1. 1. 111-04 — Nancy Briggs and Joseph Guilmette, 67 Exeter Road, North Hampton, NH. The Applicants propose a Change of Use and Site Plan amendment by relocating their existing business "Cust Cheeser's" ice cream, cheese and gift shop; also serving food, to 61 Lafayette Road, previously used as a "Gift Shop" business only and adding a 10' x 24' addition to the rear of the building. Property location: 61 Lafayette Road; property owners: Nancy Briggs and Joseph Guilmette; MA, 007-063-000; zoning district: I-B/R.

Respectfully submitted,

Phil Wilson
Chair

Applications are available at the North Hampton Town Office, 233 Atlantic Avenue, Monday-Friday 8:30am to 4:00pm for public review. 1. Items left on the table shall remain on the table until a member of Board makes a motion to remove such item from the table.

4/18/55

1/21/11

Roger J. Dignard Sr.

SEABROOK — Roger J. Dignard Sr., "Roger the Roof-er," died Saturday, Jan. 15, 2011 in Exeter Hospital.

He was born July 27, 1933, in Amesbury, Mass., the son of the late Edmund and Flora (McLaughlin) Dignard. He raised his children in Salisbury, Mass., before moving to Seabrook.

Mr. Dignard was the longtime owner and operator of Roger's Roofing Co., which was based in Salisbury, working in many of the surrounding areas.

He was a member of the Elks Lodge, the St. Jean Club and the Lafayette Club.

He is survived by two sons, Roger Dignard Jr. and his wife Cheryl, and Edmund Dignard, all of Lake Worth, Fla.; one daughter, Deborah

Bensing of Wayne, Maine; eight grandchildren; several great-grandchildren; two brothers and their wives, Joe and Maxine Dignard of New Hampshire and Norman and sister, Laura McPadden of Connecticut; and many nieces and nephews.

SERVICES: At Mr. Dignard's request, there will be no calling hours or funeral services.

Memorial donations may be made to the Roger J. Dignard Sr. Memorial Fund, c/o Deborah Bensing, 21 Tall Timber Road, Wayne, ME 04494.

Arrangements were by the Brewitt Funeral Home, Exeter. To sign an online guest book, visit www.brewittfuneralhome.com.

James R. West

EXETER — James Russell West, 83, died Saturday, Jan. 15, 2011.

Mr. West retired from Exeter and Hampton / United Electric Co. after 28 years of service. He was a U.S. Navy veteran of World War II serving aboard the USS Albatross.

He was a loving father, father-in-law, grandfather, and great-grandfather and enjoyed spending time with his family.

He is survived by his wife of 42 years, Rita (Hope) West; two sons and their wives, Michael and Evelyn West of Exeter and Jeffrey and Ann West of Milton; one stepson and his wife, Robert and Ellen Corning of Londonderry; one stepdaughter and her husband, Marilyn and Shawn Sweeney of Hooksett; his son Jeffrey's children, William, Joshua and Mik Von of Sarasota, Fla.; and step-grandchildren Richard and Matthew Corning of Londonderry; and three great-grandchildren, Amelia, Sienna and Aaron, all

of Sarasota.

He was predeceased by his parents.

WE REMEMBER: He loved the outdoors. His favorite days were spent skiing in New Hampshire's mountains, fishing in its lakes, and hunting with his buddies in the fall.

SERVICES: For those that wish to share in honoring the life of Jim West, visiting hours will be held Saturday, Jan. 22, from 11 a.m. to 12:30 p.m., at the Brewitt Funeral Home, 14 Pine St., Exeter.

A funeral service with military honors will be held following calling hours on Saturday at 12:30 p.m. in the funeral home. Spring burial will be in Exeter Cemetery.

In lieu of flowers, memorial donations may be made to the Rockingham Visiting Nurse Association, 137 Epping Road, Exeter, NH 03833.

To sign an online guest book, visit www.brewittfuneralhome.com.

Ethyle W. Sperry

MIRROR LAKE — Ethyle Wiggins Sperry, 89, died Saturday, Jan. 8, 2011, after a brief illness.

She was born Nov. 7, 1921, in Lynn, Mass., the daughter of the late Leon and Agnes (O'Brien) Wiggins.

The widow of Robert E. Sperry, her husband of 61 years, she is survived by her children, Victoria Sperry Wheeler and her husband, Randolph, of Colchester, Vt., and Robert B. Sperry and his wife, Linda Harmon, of Hampton; and two grandchildren, Kathleen Wheeler of Wrightwood, Calif., and Christopher Wheeler of Colchester.

She was a 1939 graduate of Lynn English High School and attended for the General Electric Drafting School in lieu of attending Vesper Graduate School of Art (to which she had been awarded a scholarship).

Following graduation from the drafting program, she began work in the GE Steam Turbine Engineering Department. In 1945 she was moved to serve her country and joined the Women Accepted for Volunteer Service (WAVES) and trained at Great Lakes Naval Training Station. She was a gunnery instructor (C20 unit), at the conclusion of World War II she returned to General Electric where she met her husband who was the manager of Steam Turbine Design.

WE REMEMBER: Early in their married life they were active in the Thompson Golf and Country Club of Nahant and North Reading, Mass., particularly in playing duplicate bridge at sanctioned events, garnering many master points. Also as a member of the Thompson Club, Mrs. Sperry has a "hole-in-one" and was Club Champion in 1953.

After the birth of their two children, they moved to Lynnfield, Mass., where she soon became active in a variety of organizations: PTA, US Band Boosters, Lynnfield Art Guild and The Seacoast of Lynnfield community theatre group. As a member

of three of these groups, she initiated scholarships to help enable graduating high school seniors to pursue careers in art, music, or theatre. Her personal passion in the Seacoast ranged from behind the scenes work in stage design and make-up to a variety of character roles on stage, and her art work garnered many awards at local art exhibitions.

In 1973, the Sperrys moved to Mirror Lake, and again she committed herself to becoming an integral part of her new community. She was an original member of the Lakes Region Snowbirds Club and she organized two duplicate bridge groups that are still in existence today.

In 1985 she became a member of the International Club and organized the first International Meetinghouse event, which was a 12-year member of the New Hampshire Women's Golf League.

New Hampshire was the perfect place to retire. She began skiing in 1960 at Cannon Mountain and had many fond memories of the famous ski-mob and the early ski trains from Boston. She ultimately became a member of the 70+ ski club in New Hampshire and traveled with her husband to ski in Switzerland as well as to tour Ireland, England, Greece and Spain.

SERVICES: A memorial celebration of her life will be held in the spring. Memorial donations may be made to the Visiting Nurses Association Hospice Program, P.O. Box 320, S. Main Street, Wolfboro, NH 03594 (www.vna-nh.org). The Carvers of Wolfboro, Main Street, Wolfboro, NH 03594; or the New England Ski Museum, Franconia, NH 03601. Funeral arrangements are by the Baker-Gagnier Funeral Home and Cremation Service of Wolfboro, NH. To sign an online guest book, visit www.baker-gagnierfuneralhome.com.

COLD TURKEYS: YOU COULD HELP WINTER CENSUS

Residents ask to report when they see wild turkeys

BY CHARLES MCMAHON

cmcmahon@seacoastonline.com

PORTSMOUTH — State Fish and Game officials are asking Seacoast residents who spy wild turkeys this winter to report the feathered flocks.

The New Hampshire Fish

and Game Department has asked "citizen conservationists" to report wild turkey flock sightings from now through March 31.

The initiative, known as the Winter Flock Survey, is entering its third consecutive year and is conducted in order to bolster Fish and Game's understanding of the abundance and distribution of turkeys during New Hampshire's challenging winter months.

According to Ted Walaki, turkey project leader at Fish and Game, the survey is designed to fill gaps in the department's existing winter flock data collection efforts.

"For parts of the state, es-

pecially eastern and northern New Hampshire, we could benefit by additional sighting reports," Walaki said.

"This reporting system will allow the public to contribute important information to our understanding of winter turkey status in an inexpensive, efficient and, hopefully, enjoyable way."

The survey asks participants to report the number of turkeys in the flock; the location where they were seen; the type of habitat in which the birds were observed; and what the turkeys were feeding on, such as acorns, beechnuts, seed at birdfeeders or corn silage, Walaki said.

Last winter, the surveys were used to report approximately 1,279 flocks, totaling 19,050 turkeys and encompassing all areas of the state.

According to results, the southeast corner of New Hampshire had the most reports, with 239 flocks.

Perhaps one of the most popular places for turkey sightings is the Peace International Tradeport in Portsmouth.

Turkey sightings are so prevalent that officials from the Peace Development Authority enter into a contract each year with the U.S.

Department of Agriculture Wildlife Service to monitor flocks.

Recently, PDA officials spent \$12,400 for the purpose of providing integrated turkey, other large bird, and animal control and monitoring service to the airfield.

The mitigation efforts are done to ensure the safety of the flying public, Bill Hopper, manager of airport operations.

The last time an event occurred related to turkeys was in 2003, when a KC-135E was significantly damaged when it ingested a turkey on the runway while landing.

Fish and Game officials say turkeys are easy to see this time of year because they gather in large, highly visible flocks.

Currently, there are an estimated 45,000 wild turkeys in New Hampshire.

The wild turkey population all but vanished from the New Hampshire landscape by the mid-1800s because of overuse and habitat loss from extensive land clearing.

Fish and Game officials say they were able to successfully reintroduce turkeys beginning in 1975 when 25 turkeys were relocated to New Hampshire.

DPA Drafts Five-Year Review for Country Landfill Superfund Site

The U.S. Environmental Protection Agency (EPA) has begun its five-year review for the Country Landfill Superfund Site, located in Portsmouth, NH. The review is required by the Superfund Amendments and Reauthorization Act (SARA) and the Resource Conservation and Recovery Act (RCRA). The review will assess the current status of the site and determine if additional cleanup is needed. The review will be completed by March 31, 2011. The review will be conducted by EPA Region 1, New England. The review will be conducted in accordance with EPA's five-year review process. The review will be conducted in accordance with EPA's five-year review process. The review will be conducted in accordance with EPA's five-year review process.

OBITUARIES/FROM PAGE ONE/NEW ENGLAND

Julius J. Sarosiek

STRATHAM — Julius J. Sarosiek, 59, of Stratham, died unexpectedly Tuesday, Jan. 18, 2011, at Exeter Hospital.

Julius was born Sept. 9, 1951, in Framingham, Mass., the son of the late Julius J. and Dorothy (Gardella) Sarosiek Sr.

In addition to his wife of 22 years, Susan (Graham) Sarosiek, family members include his children, Karen Sarosiek of Stratham, Julius J. Sarosiek III and his wife, Carrie, of Palm River, Mass., and Jennifer Martinez and her husband, Pino, of Haverlock, N.C.; his grandchildren, Alfonso Martinez and Ashley Sarosiek; his sister, Patricia Moniz and her husband, Alan, of Palm Harbor, Fla.; his father-in-law, James Garrity of Clinton, Maine; his sister-in-law, Linda Barfield and her husband, Mike, of Clinton; his niece and nephew, with whom he shared very special relationships, Kelly, Clint, Gary Moniz and Will McKenney; his brothers-in-law, Tom, Jimmy, David and Brian; and several nieces and nephews.

WE REMEMBER: He was raised in Framingham and graduated from Caroline Military Academy in Marion, N.H. He worked the laborer trade after school and had worked in Framingham, Mass., for many years. Julius was a 19-year firefighter and emergency medical technician with the Framingham Fire Department as well as volunteering as the town's civil defense director.

He and his wife Susan moved to Stratham in 2002 to raise their daughter, Julius was an eight-year veteran of the Stratham Fire Department.

He was a member of the Intersected Brotherhood of Bodemasters, Local 23 of Quincy, Mass., was a member of the First United Methodist Church of Portsmouth, a member of the Board of Trustees, and also was on the Board of Directors of the New England Country Music Organization.

Julius was a loving husband and father, and spending time with his family was the most important part of his life. A true thinker, he could be found building almost anything. Julius will be sadly missed by all who knew and loved him.

SERVICES: A celebration of his life will be held at 1 p.m. Monday, Jan. 24, 2011, at the First United Methodist Church, 129 Miller Ave., Portsmouth, Rhode Island and friends are respectfully invited. Burial will be private. In lieu of flowers, the family suggests donations to Karen E. Sarosiek College Fund, Northeast Credit Union, P.O. Box 240, Portsmouth, NH 03802, or to the Building Fund at First United Methodist Church, 129 Miller Ave., Portsmouth, NH 03802. Arrangements with arrangements were by the Renick & Gendron Funeral Home, Hampton. An online guest book is available at www.renickgendron.com.

CUTS: Residents express concern over school plan

Continued from page A1

budget is moving too far away from the education core at the cost of taxpayers.

"Protect the core," said Lisa Sweet, a former board member and current teacher at Portsmouth Middle School. Sweet presented data Thursday stating the city spends 9 percent less than the state average of its tax income on local education. "You do need to look and say, 'Is there waste? Is there bloat? I don't think so if we're spending 9 percent less than the New Hampshire average.'"

Sweet and others asked the board to define the term "educational core."

"What I want to let you know is that protecting the academic core is more than just the teacher (who) stands in the front of the room. You need to protect the curriculum, student support, professional development; you have to support the social, social and medical concerns that kids are coming in with every day," she said.

Bill St. Laurent spoke as a representative of the Association of Portsmouth Taxpayers, saying taxes are too high and schools play a large role in that.

"Most of the people (who) speak are geared toward their children, and I think you've done a great job with the chil-

dren," St. Laurent said. "I don't think throwing more money at it is going to make it any better because it is what it is now. I don't know how much more you can take from the people of Portsmouth. You've got to keep these budgets either level or reduce them."

Fear of damaging students' technological growth and education, particularly with the constantly increasing and changing world of technology, was a primary concern for many who spoke Thursday. The technology director would be eliminated under the budget proposal, with duties of the position reassigned to the assistant superintendent.

"The fact that the technology director is being cut when we live in a global society that technology is all around us, the idea that we are going to rely upon a centralized person to look at technology and guide us forward — particularly when we are about to build out all this new technology in the middle school — I'm concerned about that," said parent Patrick Ellis.

In urging the board to be "careful" in striving for a zero percent budget increase, parent John Beuchard argued that Portsmouth is already behind when it comes to technology, especially in the city's elementary schools.

PIMP: Arrest warrant issued by police

Continued from page A1

agencies "to bring all the responsible parties to justice." Because the case is ongoing, he said, no further information will be released before the wanted man is arrested.

Police previously said the minor was sold as a prostitute in a city hotel room after being advertised through the Web site www.backpage.com. Owned by Village Voice Media, Backpage has been targeted by prosecutors around the country for allegedly facilitating the human trafficking of minors.

MacDonald said police detectives monitoring online sites discovered the girl was being pimped in Portsmouth last fall.

Backpage is being sued by a Minnesota girl identified in court records as "M.A."

who alleges a pimp posted pornographic images of her on the site to force her into prostitution, according to The Associated Press. Through an attorney, the minor claims Backpage knew or should have known that images posted of her at age 14 were illegal and promoted child exploitation, the AP reported.

In December, the state Bureau of Investigation announced a 15-year-old girl was allegedly sold for sex and two adults were indicted on charges of aggravated sexual exploitation of a minor and promoting prostitution.

A month later, the attorneys general of 21 states, including Maine and New Hampshire, called on Backpage to remove its adult services listings, claiming the site can't filter illegal posts. One of them, Connecticut Attorney Gen-

eral Richard Blumenthal, announced in a written statement that Backpage made \$17.5 million from prostitution ads.

"Adult services sections are little more than online brothels, enabling human trafficking and sexual exploitation of women and children," Blumenthal said. "Because Backpage cannot properly police adult services sections, also under pressure by prosecutors."

Village Voice Media announced in an October blog post that it would not remove adult ads from Backpage and the ads remain active.

The teenager arrested by Portsmouth police is being prosecuted through the city's confidential juvenile court.

PEASE: \$1M grant coming to airport

Continued from page A1

and Port City Air Inc. Pease will be responsible for no more than a \$75,000 share of the agreement.

Following Thursday's announcement, PDA executive director David Mullen said the airport was fortunate to meet the expenditure threshold.

Mullen said the fact Pease has met the minimum requirement means the airport will qualify for the \$1 million subject to the consideration of federal aviation officials.

The PDA has received the annual entitlement funds since 1992.

Robert J. Crompton

PALM COAST, Fla. — Robert J. "Bob" Crompton, died Tuesday, Jan. 18, 2011, at home, surrounded by loving family.

Bob was born March 11, 1928, in Portsmouth, N.H., to Frederick and Margaret (Planagan) Crompton.

He is survived by his wife Patricia and their four children and their spouses; three grandchildren; and three great-grandchildren. They include son Gelf and wife Kathy Crompton of Newfields, N.H., and their children Bridget and Nathaniel; Gregory and wife Cindy Crompton of Dumbarton, N.H., and children Lee, Emily and wife Doreen; and Amy and husband Ray LaBelle, and their children Anne, Audrey and Ray. He also leaves son Matt and wife Maureen Crompton of Punta Vedra Beach, Fla., and children Shana and Kylee; and daughter Jennifer and her husband, Bob Marchewka, of Portsmouth, N.H., and their children Haley and Brady Marchewka, daughter-in-law Susan, Susan and husband Jim of Milford, N.H.; sister Ann Carberry of Ocala, Fla.; and several nieces, nephews and cousins.

WE REMEMBER: He graduated from Portsmouth High School in 1945, and the University of New Hampshire, completing a masters program and post-graduate studies. He was a member and captain of the basketball and track teams at both Portsmouth High and UNH. He also served in both the United States Navy and Air Force.

Bob was a lifelong New Hampshire educator and administrator. He began his career at Keene Junior High teaching English before becoming principal. He was the assistant superintendent of schools in Salem, and was superintendent of the Tilton and Hampstead districts until his retirement in 1987. Bob was active in many school and community organizations. He served on the board of the New Hampshire School Administrators Association, and was president in 1986. He was on the board of the N.H. Interscholastic Athletic Association, was a basketball referee and member of the IABO, and served as director of the Greater Haverhill, Mass., Chamber of Commerce.

After retirement, he and his wife of 60 years, Patricia "Toby" Crompton, traveled on their boat down the Intracoastal Waterway to Palm Coast, Fla., where they built their beloved retirement home. Bob enjoyed sailing, especially around the Isles of Shoals. He loved golf, basketball, following UNH sports and all Boston sports teams, singing, writing humorous poetry, and spending time with his many friends and loving family.

In the evening of the day he died, an owl perched opposite his home and watched it for a long time.

SERVICES: A celebration of Bob's life will be held in the spring in New Hampshire. For online condolences, visit www.craig-frazier.com. Arrangements are in the care and trust of Craig Frazier Funeral Home.

N.H. bill to limit college student voting criticized

CONCORD (AP) — Opponents of a bill that would prevent many college students from voting in New Hampshire say it imposes undue restrictions, clearly violates the U.S. Constitution.

The bill, sponsored by Republican Rep. Gregory Scott of Boston, would bar students from voting in college towns unless they had lived there before enrolling. House Speaker William O'Brien, who supports the bill, has complained about young people with no life experience voting liberal.

Paul Twomey, a lawyer who has represented voters in election law cases, says the bill violates the 20th Amendment, which gave 18-year-olds the right to vote. And he says a 1972 federal lawsuit in New Hampshire further settled the issue by saying voters don't have to intend to stay in one location in order to vote there.

N.H. radiologists' computer hacked by online gamers

ROCHESTER (AP) — A New Hampshire radiology practice said its computer server was broken into by hackers looking for more bandwidth so they could play the online game "Call of Duty: Black Ops."

Seacoast Radiology in Rochester said in a Jan. 11 letter to its patients that information such as name, address, Social Security number, date of birth, some medical information and limited billing information was contained on the server that was broken into. But no radiology images, patient or financial information were on the server.

The attack was discovered Nov. 12 and the computer taken offline immediately. Lisa MacKenzie, spokeswoman for a company brought in to secure the server, told *Post's* Daily Democrat there was no indication any information was compromised.

FDA: Seafood processor signs consent decree

PORTLAND, Maine (AP) — The Food and Drug Administration said a Maine company has agreed to stop shipping ready-to-eat lobster, shrimp and crab products after tests uncovered listeria.

The FDA said Portland Shellfish Co. officials signed a consent decree, approved Thursday by a federal judge, that arose from a 2010 inspection that found listeria contamination both at the plant and in a ready-to-eat product. The bacteria can cause serious and sometimes fatal infections.

The FDA said the company

ships its products to retailers in Massachusetts, California, Georgia, Illinois, Nevada, Washington, New Jersey and Louisiana. It's been the subject of four recalls in the past two years.

The consent decree calls for the FDA to approve various plans to ensure product safety. A message left with the company's general manager wasn't immediately returned Thursday evening.

Maine's Pingree chooses two House committees

AUGUSTA, Maine (AP) — U.S. Rep. Chellie Pingree says she'll be serving on the House Armed Services and Agriculture committees during the new congressional session. The Maine Democrat says she requested both assignments.

It'll be Pingree's second term on Armed Services, which will deal with issues such as defense spending and the war in Afghanistan. Her subcommittee assignments to Personnel and Seapower will deal with Navy shipbuilding jobs and other matters.

This will be Pingree's first term serving on the Agriculture committee.

Culture Committee. The appointment drew support from Russell Libby, president of the Maine Organic Farmers and Gardeners Association.

Cable TV not protected utility in N.H. House bill

CONCORD (AP) — New Hampshire lawmakers should be allowed to cut off the cable television service they provide to tenants without being sued, a lawmaker told the House Judiciary Committee on Thursday.

State Rep. Carol McGuire, R-Epsom, said her bill would exempt cable television from enjoining protections from shutting off the law now provides for necessities such as heat, water and lights.

The bill would let the landlord cut off television service if the landlord was paying for it.

The Judiciary Committee began working on an amendment to clarify that only cable television provided by the landlord would be exempt.

Legal Notice EPA Plans Phase Two Response for Coalfield Landfill Superfund Site

The U.S. Environmental Protection Agency (EPA) has begun its Phase Two Response for the Coalfield Landfill Superfund Site, located at 1000 Main Street, Portsmouth, New Hampshire. The Phase Two Response is the second of two phases of the Superfund program for the site. The first phase, the Phase One Response, was completed in 2008. The Phase Two Response will involve the removal of contaminated soil and the installation of a new landfill liner. The Phase Two Response will also involve the removal of contaminated groundwater and the installation of a new groundwater collection system. The Phase Two Response will be completed by 2012.

Legal Notice The National Marine Fisheries Service (NMFS) is proposing Amendment 11 to the Atlantic Mackerel, Squid, and Butterfish (MSB) Fishery Management Plan (FMP). The primary purposes of the Amendment are to: (1) Establish a cap on capacity in the mackerel fishery as a limited access program that does not impede optimal U.S. utilization of the fishery; (2) Update the essential fish habitat (EFH) designations for species in the MSB FMP per NMFS regulatory guidance; (3) Evaluate fishing-related impacts on large-scale egg EPH and, if necessary, minimize any adverse effects on large-scale EPH caused by fishing; and (4) Amend the EFH for the mackerel fishery to include important spawning and nursery habitat and Accountability Measures.

The deadline for written comments on the above proposal is February 4, 2011. For additional information please visit the NMFS web site at <http://www.nmfs.gov> or contact Christian Williams at (803) 559-0028 or Christian.Williams@noaa.gov.

Legal Notice PUBLIC NOTICE

The New Hampshire Coastal Program (NHCP) is reviewing the following activities for consistency with its enforceable policies:

The U.S. Coast Guard is proposing the restoration use of high frequency and ultra high frequency active coast navigation ranging (SONAR) technologies from mobile platforms to broaden its capability to locate, image, and classify submerged underwater targets of interest.

The National Marine Fisheries Service (NMFS) is proposing Amendment 11 to the Atlantic Mackerel, Squid, and Butterfish (MSB) Fishery Management Plan (FMP). The primary purposes of the Amendment are to: (1) Establish a cap on capacity in the mackerel fishery as a limited access program that does not impede optimal U.S. utilization of the fishery; (2) Update the essential fish habitat (EFH) designations for species in the MSB FMP per NMFS regulatory guidance; (3) Evaluate fishing-related impacts on large-scale egg EPH and, if necessary, minimize any adverse effects on large-scale EPH caused by fishing; and (4) Amend the EFH for the mackerel fishery to include important spawning and nursery habitat and Accountability Measures.
