Attention Mr. Frank Driggers

Request For Estimate

Inventory of windows at 325 Main St.

Portsmouth NH 038014621

- 1) $35 \times 27 \frac{1}{2}$ 2) $35 \times 27 \frac{1}{2}$ 3) $41 \times 27 \frac{1}{2}$
4) 56×789 5) $44 \times 27 \frac{9}{8}$ 10) $41 \frac{1}{2} \times 27 \frac{1}{2}$
11) $44 \times 27 \frac{1}{2}$ 12) $44 \times 27 \frac{1}{2}$ 13) $43 \frac{1}{2} \times 27 \frac{1}{2}$
14) $43 \frac{1}{2} \times 23 \frac{1}{2}$ 15) $43 \frac{1}{2} \times 27 \frac{1}{2}$
16-17-18) $43 \frac{1}{2} \times 27 \frac{1}{2}$ 19-20-21-) $43 \frac{1}{2} \times 26 \frac{1}{2}$
22) $43 \frac{1}{2} \times 26 \frac{1}{2}$ 6 windows were $9/6$ rest $8/6$

These dimensions are for estimate only.

These measures were by me, and prior to any order should be professionally redone.

The labor component should include removal of aluminum trap track storm windows.

Thanks and Regards

Thomas W. Mendenso

325 Main St

Portsmouth NH

THE GREEN MOUNTAIN WINDOW COMPANY

MEASURING INSTRUCTIONS FOR SASH AND BALANCE KITS

STEP ONE: The first measurement should be the frame width. Place a tape measure on the sill and measure from the inside of the left jamb across to the right. The same measurement should be taken in the middle and the top of the frame to be sure the frame is square. Record the result as dimension "A".

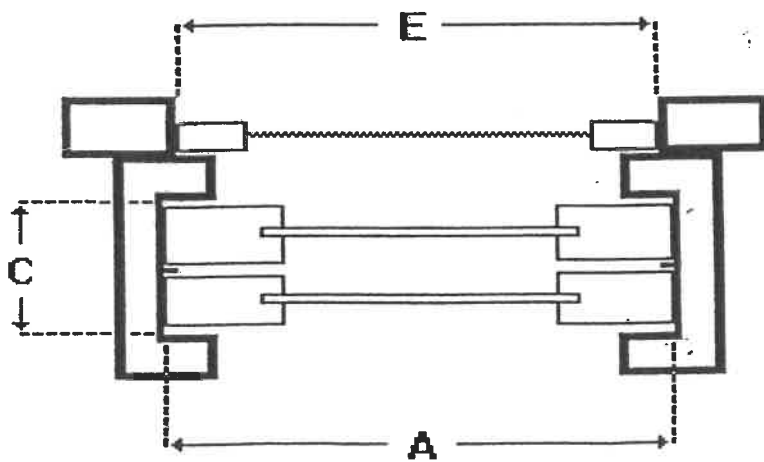

STEP TWO: Next you will need to determine the frame height. This dimension is found by measuring from where the bottom sash touches the sill on the outside of the window, straight up to where the top sash touches the head jamb. This is dimension "B". Be sure to check this dimension in the middle and on the opposite side of the frame as well.

STEP THREE: You will need to determine the width of the jamb between the existing stops. Lift the bottom sash and measure from one stop across to the other and record as dimension "C".

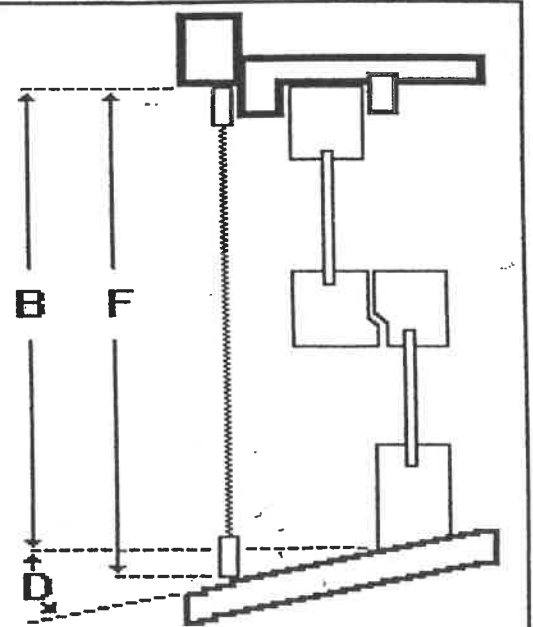

STEP FOUR: Most windows have a 14° sill angle. Our replacement windows come prepared for that angle, unless otherwise specified. So it will be necessary to determine the angle of your existing sill and record it as measurement "D".

STEP FIVE: If you would like a screen for your new sash and balance kit, it will be necessary to determine the distance between your existing exterior casing from inside edge to inside edge. You should check this dimension across the sill, in the middle of the window, and across the top piece of casing. Then record the smallest of the three measurements as dimension "E".

STEP SIX: You will also need to determine the height of the screen. Measure from the inside edge of the top casing straight down to the sill. This should also be measured in three places and the smallest dimension should be recorded as "F".
