OBJECTIVES

• Enliven and enhance pedestrian vibrancy.
• Widened sidewalk plazas, outdoor dining, artist and musician spaces.
• Street level restaurant, with office space above.
• Public pocket courtyard, gardens and landscaped pedestrian ways.
• Public art at street level outdoor spaces.

ZONING

• Character District CD-5
• Community Space Development Incentive 10.5A43.33: +1 story and +10' height

Water-struck Brick has become symbolic of the mindset and cultural fabric of New England: hard, somewhat irregular in appearance, steadfast but unpredictable, and stubbornly able to withstand adversity and thrive in a hostile physical climate. First fired in the 17th century in Medford, Massachusetts, from clay from the Mystic River flats, water-struck brick was the essential building block of Georgian New England and remains the choice for institutions and individuals seeking links to the great tradition of building in that part of the world.

Design with freedom.
Why Renaissance®?

Arriscraft Renaissance® Masonry Units offer architects, builders and property owners a premium stone with exceptional performance, beauty and flexibility. Our unique Natural Process technology mimics how stone is created in the earth – yielding cement-free stone products with the aesthetic, strength and durability benefits of quarried stone, plus cost effective installation.

Renaissance® units are offered in standard sizes and colors, yet offer tremendous flexibility through custom colors, blends, shapes and sizes - in rocked, smooth, satin, or sandblasted finishes. Discover the unparalleled beauty and design opportunities of Renaissance® Masonry Units, backed by an industry-unique lifetime product warranty.

**NATURAL EDGE®**
Our Natural Process technology replicates how stone is formed in the earth and creates products with the aesthetics and durability of quarried stone, plus the benefits of standard installation and unlimited supply.

**SELECTION**
Our comprehensive product range includes: the classic Renaissance® stone, a robust Building Stone collection, three versatile thin-clad options, various brick styles (including our long, contemporary option), Adair® limestone, and a full offering of cast accessories.

**SOLUTIONS**
We lead the industry in premier product support, including an extensive technical library, complimentary Masonry Envelope Review services, personal technical support, and renowned custom color and blend development. Our on-site technical services can provide historical matching, unique colors and custom blends, as required.

**INNOVATION**
Product innovation at Arriscraft continues to meet market demands for modern stone designs and lightweight, thin stone solutions, as well as matching processes to replicate historical stone as quarries close after decades of use. We also continuously improve our manufacturing process to lead the industry in green and sustainability initiatives.

**EDUCATION**
We educate daily through our technical support, AIA credit courses, and an ever-broadening information base. Our website offers high-res color sheets, data sheets, seamless texture images, a Building Stone Calculator, plus our growing blog of articles and tips. For decades we’ve provided complimentary mason training and student tours, and sponsored the University of Waterloo Architecture Lecture Series.

---

Arriscraft stone brings timeless elegance to our modern design. The best products, the best service, the best results.

MILAN MALINOVIC, PRINCIPAL
Design Cooperative, LLC
Renaissance® Masonry Units are available in a stunning range of natural standard colors. Arriscraft offers custom color development and also allows customers to create custom blends using different standard colors. With so much creative flexibility, Arriscraft can bring any design to life.

Because all Arriscraft products are manufactured to have through-body color, units can be cut, chiseled and dressed on-site. In addition, designers can order custom shapes and sizes to create truly unique projects.
Meeting EPA Standards for Patinated Copper

Star Blue copper is produced in Zahner’s award-winning, EPA compliant facility. Patina effluent is properly captured and disposed of in compliance with local, state, and federal regulations. This ensures the health and safety for the families who work at Zahner, as well as the community at large in which it is made.

A Prestige Metal Material from Zahner

Star Blue copper a lead-free material with custom patina on copper-alloy sheet metal. The sophisticated material is part of Zahner’s line of raw patinated materials which are designed to age like tanned leather and vintage wine. The result is a look that can function both for contemporary as well as historic aesthetics.

Designed to Age and Endure

An iridescent surface, the Star Blue copper appearance benefits from a microfilm which develops on the exterior layer of the material. The oxidized layer is like a living protecting barrier which grows and evolves as it further oxidizes.

For exteriors, this appearance will change over time. If sealed and maintained, it is possible for a custom copper patina such as Star Blue to maintain its iridescent luster. As an interior surface, the Star Blue copper’s unique finish can last indefinitely, especially if the material is sealed.
Exterior and Interior Applications
Star Blue copper can be used on interior and exterior applications. The patina will not rub off. However, over time, the patina appearance will continue to change. As the mineralized patina reacts with the atmosphere, it will continue to change in tone and contrast as it further oxidizes.

Patina vs. Paint
Surface patina should not be confused with paint. Patina is a mineralized oxide on metal that is self-limiting (rust, for instance, is not self-limiting because it will continue to eat through a surface). It is a reaction to the elements that in turn provides a protective barrier from the elements. While paints will have a short lifespan, deteriorating over time, a patina on metal can last for generations.
Specifications

Architectural Guide Specifications

Revere’s ContinentalBronze® is cut, bent, formed, and installed using the same tools and techniques as with mill-finished copper. Complete details and specifications for the installation of architectural sheet copper are contained in the Revere manual, Copper and Common Sense, Eighth Edition.

Materials

ContiHnentalBronze

Pre-oxidized sheet copper shall be Revere standard, ounce-weight (16 ounce-and 20 ounce as noted on drawings) architectural copper sheet and/or coil conforming to ASTM B370 that has been oxidized to a uniform, brown-black/stannary finish* under controlled conditions in a copper-rolling mill. Unless otherwise noted, temper shall be H100.

Artificially/chemically “aged” and/or coated copper shall NOT be allowed.

COMMENTARY:

*Since the phrase “uniform, brown-black/stannary finish” is subject to personal interpretation, Revere suggests architects review samples of Pre-oxidized copper with Revere’s Architectural Services Department prior to specifying this product.

Handling and Storage

Store ContinentalBronze copper sheets, coils and formed sheets off the ground in an enclosed structure. Do NOT store in a manner or location so that water or moisture may remain between sheets or shapes prior to installation. Do NOT store on bare ground under a tarp or in another manner that may cause condensation to form on or between sheets or shapes.

Protection

Handle sheets and shapes in a manner to reduce scratches, dents, etc. Copper shall be protected during installation and cleaning at masonry, cutting and welding of steel, and similar activities above or adjacent to it with tarps, polyethylene sheeting, etc.

To prevent water stains, temporary protection shall be removed at the end of each workday.

COMMENTARY:

In the absence of oxygen, standing water may cause water stains. Water stains and surface scratches should not affect the life or durability of ContinentalBronze. However, they can be aesthetically unattractive.

Workmanship/Installation

Surfaces to be covered with copper shall be smooth and free from defects of every description. Surfaces shall be cleaned of dirt, rubbish and other foreign materials before copper work is started. Projecting nails shall be driven flush.

NOTE: Copper should not be installed over spalled framing or metal decks unless the spalls are filled or covered. Over time, copper will “sag and telegraph” at the voids.

Underlayments

Roofing Felts shall conform to ASTM D4089 or D6375 and shall have a minimum weight of (15/30) pounds per 100 sq. ft. Only smooth surface felts shall be acceptable.

Membrane Underlayments shall be suitable for continuous in-service temperatures of not less than 250°F without deteriorating. Unless approved by manufacturer, membranes shall not be used under seams soldered in the field.

NOTE: Direct solar radiation can raise the temperature of copper to approximately 150°F if sunlight is focused onto the copper from adjacent construction, i.e., roofs, windows, etc., or natural objects, the temperature of the copper can exceed 200°F. For proper soldering, the temperature of the copper must be raised to over 450°F.

Rosin-Sized Paper shall be smooth, unsaturated building paper weighing approximately three to four pounds (3 to 4 lb.) per 100 sq. ft.

Soldering

Before soldering ContinentalBronze, the oxidized surface must be mechanically removed and bare, bright copper exposed.

Tinning Prior to soldering, copper shall be mechanically cleaned of all oxides on both sides for a width of not less than 1 1/8”. Then, cleaned copper shall be coated with solder on both sides for a width of not less than 1 1/8”.

Flux shall be muriatic acid killed with zinc chloride, rosin flux, or approved brand of soldering flux. Immediately upon completion of soldering, residual flux shall be thoroughly washed off with clean water.

Soldering shall be done slowly with well-heated copper – to heat the seams thoroughly and to sweat solder completely through the full width of the seam. Seams shall show at least one full inch (1”) of evenly flowed solder. Whenever possible, all soldering shall be done in the flat position. Seams on slopes steeper than 45 degrees shall be soldered a second time.

Soldering of Copper: Soldering shall be done with heavy, properly tinned copper. For flat seam work and gutters, they shall weigh not less than 10 lb. per pair. When a acetylene heated soldering torch is used and ambient temperature is above 45°F, the copper itself shall weigh not less than 7 lb. When ambient temperature is below 45°F, the copper itself shall weigh not less than 1.5 lb.

Cleaning

Upon completion, if necessary and only if instructed by the architect, ContinentalBronze shall be cleaned by washing with clean, fresh water only. Do not chemically or abrasively clean ContinentalBronze. Do not use soaps, detergents, alkalis, acids, or other cleaning agents.

NOTE: Fingerprints and similar discolorations are normal on all copper installations. Revere strongly suggests that no attempt be made to clean or remove such discolorations from exterior copper installations. Attempts to clean exterior copper installations are usually unsatisfactory and only result in delaying natural weathering.

Ordering

ContinentalBronze is priced at a premium above Revere’s Classic Copper. Contact your local distributor for prices and load times.

Availability

Through Revere sheet copper distributors throughout the U.S. and Canada.

Warranty

Call Revere for complete warranty details.

Technical Guidance

If you have questions or concerns about the use of ContinentalBronze on a particular project, please call (800) 448-1776, Architectural Services.

Why Use ContinentalBronze?

This “leap ahead” in time can be especially appealing for wall claddings (which typically age slowly), soffits (which age slower still), interior applications (which may not age at all), and locations where the reflectivity of new, bare copper is prohibited by codes or might be aesthetically objectionable.

Environmentally Sound

As with all Revere architectural copper, "ContinentalBronze" is very environmentally friendly. It is made from 90% to 95% recycled copper that has been harvested from within 500 miles of our facility in New York, NY. It is an ideal material for roofing, wall cladding, rainwater goods, and similar applications. For LEED projects you gain the durability, sustainability, beauty, and recyclability of copper.

50-85% of the time, we are able to use recycled scrap and avoid mining and smelting operations.

"ContinentalBronze" is made from mainly "number 1, bare-bright" scrap. Coated wire and/or other materials that emit VOCs or similar compounds are not used during melting or fabrication (rolling).

Market conditions dictate when and where recyclable copper is available. Nevertheless, well over 75% of this material is obtained from sources within 500 miles of our plant. Due to the competitive nature of the scrap copper market we cannot disclose individual locations (or cities) from which we obtain copper.

Depending upon market conditions the exact percentage of recycled copper and mix of post-consumer and post-industrial material will vary. Since market conditions change constantly Revere cannot accurately identify the ratio of post-consumer to post-industrial copper in a given order. Therefore, Revere uses the conservative position that its copper contains only post-industrial material.

All of Revere’s architectural sheet copper is made in New York, NY – approximately 95 miles west of Albany, NY.

Durability/Weathering of Oxide

"ContinentalBronze" maintains all the positive features of working with bare copper – ease of forming, bending, and general installation practices.

To ensure the most aesthetically pleasing application, Revere suggests standard industry sheet metal practices, such as those presented in the Eighth Edition of Copper and Common Sense, be applied. This includes, but is not limited to: the use of clean glues during forming and installation of copper, maximizing traffic on installed copper, soldering techniques, and more.

The oxide is a hard and durable surface, and is able to withstand most normal forming, bending, and installation practices. Nevertheless, bending or brake forming can result in loss of oxide crystals and produce “pencil lines” of bare copper. The oxide may be scratched if subjected to a combination of pressure and abrasion, and may exhibit fingerprints.

Maintaining a Statuary Brown Color

There are a number of methods and products used to protect statuary finishes. In Revere’s experience, periodic oiling is usually the easiest and least expensive.

Oiling does not create or hasten the development of a statuary color. Rather, it may improve the uniformity of the oxide film and impart richness and depth of color that could not be produced by natural weathering alone.

Oils used for this purpose are many and varied. They include linseed oil (raw or boiled); lemon oil; lemon-grass oil; paraffin oil; castor oil; and sometimes vegetable oil. Our experience indicates that either raw or boiled linseed oil is as good as any, and has the added advantages of low cost and ample supply. Boiled linseed oil dries more quickly upon application than the raw type of oil. Because it is less prone to pick up dust particles from the air, boiled linseed oil seems to be used more often than raw oil.

Under ordinary circumstances it is not necessary to clean the metal, either chemically or mechanically, prior to oiling.

The oiling procedure is not at all complicated. It consists of applying a liberal coating of oil to the metal surface with a brush or rag and then wiping off the excess oil with a clean, dry rag to leave a thin, even film. Local atmospheric conditions tend to influence the durability of the coating or the number of oilings required to produce the desired effect. There are reports of installations varying in age from one to almost 20 years that are still giving satisfactory performance with only one application of oil. For the average installation we suggest two coats be used initially.

Periodic oiling is the method that has been (and still is) used to maintain the statuary color of the Seagram Building in New York City for over 50 years.

For additional information about ContinentalBronze or any of the Revere family of architectural coppers, contact Revere’s Architectural Services Department at (800) 448-1776, extension 2554; fax (315) 338-2105; e-mail archcopper@revere.com.

Local atmospheric conditions tend to influence the durability of the coating or the number of coatings required to produce the desired effect. There are reports of installations varying in age from one to almost 20 years that are still giving satisfactory performance with only one application of oil. For the average installation we suggest two coats be used initially.

Periodic oiling is the method that has been (and still is) used to maintain the statuary color of the Seagram’s Building in New York City for over 50 years.

ContinentalBronze® – is premier architectural copper produced to ASTM B370 that has been "pre-aged" to a natural brown/bronze oxide finish under controlled conditions – without chemicals. The oxide is essentially the same as the one that forms on plain, "red" copper within two to five years after it is exposed to the local micro-environment. It is not a paint or resin-based coating applied to aluminum or steel, nor is it an alloy (does not contain tin). The aesthetics of ContinentalBronze are similar to those of plain copper that has been exposed to the atmosphere for several years. ContinentalBronze will not appear as a uniform, monochromatic surface but rather "alive" and vivid with variations of shade or hue within and between sheets or coils. In essence, what we have done is to "leap ahead" in time.

The oxide is not a permanent finish; rather, it is an advancement of natural weathering. As it is exposed to the elements, ContinentalBronze will continue to age and eventually assume a mature, green patina. The time required for this to occur cannot be predicted as the process depends on local (micro) environmental conditions and severity of exposure. In most cases, 10 or more years will be required for the oxide to convert to a green (sulfate) patina, although the time required will vary.

Maintaining a Statuary Brown Color

There are a number of methods and products used to protect statuary finishes. In Revere’s experience, periodic oiling is usually the easiest and least expensive.

Oiling does not create or hasten the development of a statuary color. Rather, it may improve the uniformity of the oxide film and impart richness and depth of color that could not be produced by natural weathering alone.

Technical Guide P
Cyprium Collection
The Cyprium Collection features copper and bronze clad windows and doors unique in design and construction.

These hand-wrought living surfaces develop distinctive patinas that adopt and define the individual aesthetic character of the homes to which they belong.

The Cyprium Collection is available in Casement, Awning, Picture/Direct Set, Specialty Windows, Terrace Doors and LiftSlide Doors.

Copper natura patina Casement window with 7/8" (22 mm) Simulated Divided Lites (SDL).

**Bronze Palette**

- Bronze Natura
- Bronze Umbra
- Bronze Verdigris

**Copper Palette**

- Copper Natura
- Copper Umbra
- Copper Verdigris

Patinas, the living finishes that cloak copper and bronze, are as unique as their location. Environmental factors such as humidity and salinity work together with time to coat the surfaces with a signature patina. Treasured as a mark of lasting value, each patina is distinct and ever-changing.

Patinas typically progress from their natural state, through earthy browns and finally settle into a distinctive verdigris green.

As the patina ages, residue may wash down and be visible on surfaces beneath the cladding. This is natural and adds to the classic appeal of Cyprium windows and doors.

Note: Colors may not be exactly as shown.

**Deep Interior & Exterior Profiles**

As the illustration shows, Cyprium Collection profiles — and their matching interior wood muntins and glass stops feature a deep relief profile. Nominal .040" Copper and Bronze cladding is used to craft a rich, architecturally balanced appearance.

Cyprium SDL are also available in 7/8" (22 mm) as shown, 1 1/4" (32 mm) or 2" (51 mm).
Soldered Joints
Lead-free hand soldered joints render an authentic appearance that is both attractive and functional. Soldered joints create a cohesive, watertight body for frame and sash members resulting in a uniform reaction to temperature fluctuation.

Recessed Mullion
Recessed from the face of the sill and frame, this classical mullion detail adds visual harmony. Cyprium’s deep sills are well suited to masonry wall construction.

Capped Sill End
Hand-fitted sill caps are soldered in place for structural integrity and a finished appearance.

Picture/Direct Set Profiles
Picture/Direct Set (fixed, non-sashed units) offer an even deeper offset from the face of sill, head and frame members to the vertical plane of the glass.

Cyprium Terrace and French Terrace doors are available with flat or raised exterior panels and mid-rails.

Cyprium Collection Doors

Loewen’s full clad door panels combine rugged performance with architectural elegance.

A fitting partner to legendary Loewen Douglas Fir (standard) or Mahogany (optional) construction, Cyprium doors offer robust security and timeless style with individuality derived from nature’s “perfect imperfection” of a living patina.

Equipped with standard multi-point hardware — with stainless steel exposed components — Cyprium door and entryway systems are secure and reliable.

Bronze Umbra patina Terrace door featuring 7/8” Simulated Divided Lites (SDL).

**EXAMPLE #1:** PS1 2415, Frame dimensions, 94 1/2” (2400mm) x 59 1/16” (1500mm).
Masonry width = 94 1/2” (2400mm) + 5/8” (15mm) x 2 = 95 3/4” (2430mm)
Masonry height = 59 1/16” (1500mm) + 5/8” (15mm) + 1” (25mm) = 60 11/16” (1540mm)

**EXAMPLE #2:** CA1 0816, Frame dimensions, 31 1/2” (800mm) x 63” (1600mm).
Masonry width = 31 1/2” (800mm) + 5/8” (15mm) x 2 = 32 3/4” (830mm)
Masonry height = 63” (1600mm) + 5/8” (15mm) + 1” (25mm) = 64 5/8” (1640mm)
Ultra Series
Kolbe’s Ultra Series windows and doors can mimic the traditional style of wood windows and doors with a warm wood interior and intricate exterior trim details, or they can accommodate modern design needs. Choose from an extensive palette of exterior colors, interior wood species and finishes, divided lite profiles, and more.

The Ultra Series provides:
• Versatile styling, from traditional to modern architectural details
• Divided lite profiles & patterns; aesthetic & efficient glass choices
• Wood interior in familiar to exotic wood species
• Strong and durable extruded aluminum exterior
• A palette of 50+ exterior & 20 interior pre-finish choices
Residential Construction

Years of innovation at Kolbe have led to products with great design flexibility for residential construction. Whether it’s renovation or new construction, we offer products that add your signature style into your home. Your design reflects not only an architectural style, but also your individualism – from colonial to contemporary, Kolbe has the products to help you express yourself.

Commercial Capabilities

Each of our windows and doors are built-to-order. Uniquely crafted to each project’s specifications, Kolbe provides endless options and design solutions in configurations suitable for commercial projects. Our technical specialists can help provide support on various aspects of your commercial project.

Historical Renovation

Our reputation for producing custom-crafted windows and doors with attention to intricate details lends itself perfectly to historical renovation projects. Our products are designed to marry traditional design aesthetics with advanced technology and sustainability, and we offer many options to restore beauty to your project while maintaining historic character. In addition to providing aesthetics and efficiency, Kolbe can work with you to meet building codes and historical district requirements.

Energy Efficiency

Kolbe windows and doors are available with a wide variety of glass options to meet your energy needs in any climate. In fact, many Kolbe products meet or exceed ENERGY STAR® guidelines in most climate zones while reducing energy costs for home and business owners.
Sustainable Design

Due to our commitment to maintaining ecological sustainability, Kolbe sources most of the components used in our window and door products from within 500 miles of our factory. The wood species we use are renewable resources sourced from managed forests, while our standard glass contains 25-30% recycled content. In addition, we can provide The Forest Stewardship Council® (FSC®)-certified wood species for many of our window and door products (FSC® license code FSC-C019541).

Impact Certification

Impact modifications are available on a number of Kolbe windows and doors. Our products are specially designed with the strength and durability to withstand hurricane force winds and flying debris, and are independently tested to meet or exceed strict building codes in coastal regions. There are no unsightly rods or extra locks to fasten, so Kolbe’s impact-certified products offer the same beautiful appearance as non-impact products.

Design Options

For over 70 years, Kolbe products have been all about customization. We offer many options for our windows and doors, including wood species, custom divided lite patterns, unique shapes, and many interior and exterior finishes to complement the design aesthetic of any project. We’re known worldwide for our custom solutions and have worked closely with architects to build distinctive windows and doors that help bring your most innovative ideas to life.

Universal Design

Universal design is the concept of creating spaces that are accessible and comfortable for individuals of diverse physical ability levels. Kolbe offers options for a variety of windows and doors that are not only designed to make independent living possible, but to do it with quality, style and flexibility. Kolbe’s options, such as sill ramps, motorized operators, larger cranks and lever door handles, can help make independent living easier.
Casements

The design and performance of Ultra Series casements are the features that make these windows so popular. Most casements open from the side to a 90-degree angle, allowing for maximum ventilation. Multi-point locking levers offer a sleek, convenient way to tightly secure your windows from one locking location.
Crank-Out XL Casement

Kolbe’s crank-out XL casements fill massive openings for generous views and ventilation. A simple cranking operation opens and closes the window easily, despite the large size, with a choice of handle styles that fold down to avoid interference with curtains or drapes.

Crank-Out XL Casement Standard Features

- 2-1/4” thick sash
- Overall jamb width is 4-9/16” (basic box width is 3-1/4” plus extensions)
- Constructed of pine, with pine interior stops and wood mull casings on mulled units
- Exterior wood parts are treated
- Extruded aluminum exterior finished with a 70% PVDF fluoropolymer coating (meets performance requirements of AAMA 2605)
- Accessory grooves are integral to the extruded frames for the easy addition of accessories
- Energy efficient, insulating Solar Low-E glass
- Glazed to the interior with beveled wood glazing beads

NOTE: All measurements are nominal.
* Standard only on units without brickmould.

Hardware

- Nesting handle and locking lever† provide a sleek look and are unobtrusive. Available in Clay, White, Beige, Bright Brass, Antique Brass, Satin Nickel, Antique Nickel, Rustic Umber, Oil-Rubbed** or Matte Black.
- Metal Ashlar handle with multi-point locking lever. Available in White, Rustic Umber, Satin Nickel or Matte Black.
- Nesting handle with custodial lock prohibits unauthorized operation. Available in White, Beige, Rustic Umber or Matte Black.
- Universal design casement handle and lock are larger and offer ease-of-use for people with physical limitations. Available in White or Clay.

†Locking lever is not available on French casements.
**The Oil-Rubbed finish is a living finish, which means that it will change appearance over time with use.
**Crank-Out XL Casement Options**

**Glass** *(pg. 200)*
- Solar Gain Low-E
- Solar Advanced Control Low-E
- Solar Control Low-E
- ThermaPlus™ Low-E
- Neat®
- Triple pane
- Patterned-, bronze-, or gray-lite
- Tempered or laminated
- Other options standard to the industry

**Divided Lites** *(pg. 201)*
- Performance divided lites with 5/8", 7/8", 1-1/8", 1-3/8", 1-3/4", 2-1/4" or 4-1/2" bars
- Grilles-in-the-airspace

**Insect Screens**
- Insect screen with aluminum or UltraVue® fiberglass mesh; frame available in White, Beige, Dark Bronze anodized, Clear anodized, or Coal Black
- Retractable insect screen kit with beveled or square cover *(pg. 204)*
- Wood wrapped insect screen frame *(not available on radius top units)*
- Brass insect screen with Brass frame *(not available on radius top units)*

**Other Options** *(not all options are available on all casement types; custom options are also available)*
- French crank-out casements
- Other wood species and FSC®-certified wood *(pg. 198)*
- Interior prefinishing *(pg. 198)*
- Interior casing
- Ashlar handle in Satin Nickel, White, Rustic Umber or Matte Black
- Single-arm operators with Euro hinges *(meet emergency escape and rescue requirements on some “L” Series casements)*
- Stainless steel exterior operator parts
- Extension jamb*(up to 12" applied, over 12" shipped loose for field application)*
- Galvanized steel installation clips
- Factory-installed Window Opening Control Device (WOCD) *(pg. 203)*
- High performance or impact performance modifications *(pg. 205)*

**NOTE:** All measurements are nominal.
Crank-Out XL Casements | Double Pane

Crank-Out XL Casements with 4-9/16" Jamb | Triple Pane

NOTE: Drawings are not to scale. Brickmould is shown factory-applied. Brickmould may be shipped loose for field application. Some units are shown with optional drip cap or nailing fin. For Ultra accessory or application drawings, see pgs. 206-212. Additional and the most current drawings are available at www.kolbewindows.com.
Exterior Color Options

Ultra Series products are finished with a 70% PVDF fluoropolymer coating, which is the best choice for durability and resistance to chemicals, abrasion, corrosion, and weathering. It carries up to a 30-year warranty, which proves Kolbe’s commitment to providing the very best. In addition to the standard colors, custom colors can be specified, as can 4 anodized aluminum finishes and 4 mica fluoropolymer finishes.

Some options for our products may have limited color offerings or may incur a nominal charge. Check with your Kolbe dealer for further details on pricing and availability. Printed images of exterior finishes may vary slightly from actual colors. Selections should be made based on actual color samples available from your Kolbe dealer.

There is a “color range” with anodized colors. That is, there is an acceptable “light” to “dark” color range that can be experienced on any job. According to AAMA 611-98 specifications, Section 8.3, the range may be up to 5 Delta E’s. We can provide from our anodized vendor color samples of this color range if requested. The color range is due to numerous variables which include (but are not limited to) the shape of the parts, alloy variations and time in the anodizing process. This could mean that a sash part may appear slightly different in color than a frame part. This is/will be acceptable. Even the samples that may be provided may vary from the final product due to the variables. You must be aware of this as this will be considered acceptable.
Glass Options

Glass
Kolbe offers glazing options to provide optimum energy efficiency for the geographic region in which you live. Low-E is a “smart” coating that reduces energy transfer through the insulating glass unit. The result is reduced heating and cooling costs throughout the year. Low-E coatings also reduce the potential for condensation, as well as provide protection against fading of furniture, fabrics and carpeting.

Kolbe offers the following Low-E glass options, as well as many specialized options.

Solar Low-E
Suitable for most climates and meets most energy zone requirements. Solar Low-E glass is designed to reflect room-side heat back into the room during winter months. In summer, visible sunlight is allowed in while blocking most of the sun’s infrared heat energy. Kolbe’s standard.

Solar Gain Low-E
When the weather turns frigid, Solar Gain Low-E glass is the perfect cold remedy. It keeps homes warmer and more comfortable by blocking heat loss to the outside and letting the sun’s heat stream in to increase solar heat gain.

Solar Advanced Control Low-E
A tinted glass recommended for warm climates that achieves solar control over a wide range of the spectrum, while also helping to reduce glare.

Solar Control Low-E
Offers an ideal balance of solar control and high visibility by blocking 95% of UV rays while maintaining the interior temperature.

ThermaPlus™ Low-E
An additional Low-E coating which helps to meet the strictest energy requirements by providing protection against heat loss and UV damage. Available with dual pane versions of Solar Low-E, Solar Control Low-E or Solar Advanced Control Low-E glass.

Triple Pane
Provides a greater energy performing window that keeps indoor air warm and comfortable, prevents heat loss and lowers your heating bills. It is constructed with three panes of glass, thermal spacer bars and is available in Solar Low-E, Solar Gain Low-E, Solar Control Low-E and Solar Advanced Control Low-E glass.

Preserve® Film
A protective film that protects the glass surfaces from scratches during transit and construction, as well as reducing the time involved in job site clean-up.

Tinted, Colored or Patterned
Provides shading, privacy or visual interest.

Tempered
Standard in Kolbe doors to address safety concerns. Also available in window units to meet specific building codes.

Laminated
Benefits include safety, security, sound control and provides the ultimate in UV blockage.

Impact
Glazing utilized to withstand harsh environmental conditions, especially in coastal regions. Combined with an impact rated product, this glazing offers the highest level of security.

Neat®
Harnesses the sun’s UV rays to loosen dirt so water can rinse it away, leaving windows virtually spotless. A special sputter-coating process makes the glass ultra smooth, so the water “sheets off” more readily than it would on uncoated glass, allowing you to spend less time cleaning.

Not all glass is available on all products. Please contact your Kolbe dealer for product specifics. Neat and Preserve are trademarks of Cardinal IG. Low-E insulating glass with a stainless steel spacer bar carries a 20-year warranty. Not all glass options listed have the same glass warranty. Please contact your dealer for details.
Divided Lite Options

Expand the character of your home or project by adding one of our divided lite options to your windows and doors. Choose anything from a traditional, colonial-style pattern to a unique, custom design to accentuate the overall appearance of your project. Kolbe offers two types of divided lites for Ultra Series products: performance divided lites and grilles-in-the-airspace. As standard, wood bars have a beveled profile, however, an ovolo profile or a square profile is also available. Divided lite cross section drawings can be found on pg. 213.

Performance Divided Lites
Kolbe’s performance divided lite (PDL) glazing system gives the appearance of true divided lites without sacrificing energy efficiency. Extruded aluminum bars are adhered to the exterior and pine bars are adhered to the interior of the single lite of insulating glass. Aesthetically pleasing spacer bars are installed within the insulating glass unit. Together, these bars create the illusion of true divided lites. PDL bars are available in 5/8", 7/8", 1-1/8", 1-3/8", 1-3/4", 2-1/4" or 4-1/2" bar widths. The exterior finish of the aluminum bars will match the exterior finish on the unit. Variations on the PDL option may include custom grille patterns, custom bar widths or no spacer bars. Some designs may have a composite material for the exterior PDL bar.

Grilles-in-the-Airspace
Grilles-in-the-airspace are constructed with aluminum bars sealed between two panes of insulating glass, offering the look of divided panes while reducing cleaning time. For units with 7/8" insulating glass, contoured, 3/4" wide bars are standard in White, Beige, Sand, Rustic, Hartford Green and Chutney. Optional colors are light wood and dark wood faux finishes. Two-tone contour or flat grilles are available with either light or dark wood faux finishes to the interior and White to the exterior. Also available for 7/8" insulating glass are 5/16" wide Brass and Pewter pencil bars.

Glazing Beads & Muntin Bars
As standard, glazing beads have a beveled profile, but may also be ordered with an ovolo or square profile. Matching muntin bars are available on units with performance divided lites (PDL). Units will have beveled muntin bars on the exterior, regardless of which profile is chosen for the interior. (See divided lite cross section drawings on pg. 213).
Options & Accessories

Exterior Trim Options
Ultra Series windows and doors are standard without brickmould. For a more distinctive look, numerous different extruded aluminum trim profiles are available. Various sill nosings can also be applied with brickmould to enhance the overall appearance and to create the perfect look. Custom brickmoulds and casings are available as well; talk to your local Kolbe dealer for more information.

- 1-15/16" brickmould
- 1-5/8" brickmould
- 2" flat casing
- 2" flat casing with backband
- 3-1/2" profiled brickmould
- 3-1/2" flat casing
- 3-1/2" flat casing with backband
- Ogee casing
- Bull nose casing
- Historic brickmould
- Pavilion brickmould
- Stucco casing
- Beaded casing
- Beaded casing with backband
- Chicago brickmould (field applied only)

NOTE: Additional trim details are shown on pgs. 206-212.
Universal Design
To meet the needs of homeowners with physical limitations, Kolbe offers a variety of windows and doors that are designed to make independent living possible. From door sills that create a flush surface for easier passage between the interior and exterior, to window and door hardware that provides ease of operation, we have numerous options that will help make living at home far easier. Whether your project is new construction or you are adapting an existing residence for a special need, Kolbe’s windows and doors with universal design options will give you the freedom and style you are seeking.

Casements
- Longer crank handles with large knobs for casement windows make operating easier. Available in white or clay.
- Larger levers for multi-point casement locks make locking of a casement window easy. Available in white or clay.
- Motorized operators make opening and closing casement windows simple and effortless. Available in white or clay.

Double Hungs
- A crank handle hardware kit for double hungs allows the bottom sash to be operated with minimal effort. Available in white.

Swinging Doors
- Wider door sizes help provide additional space for those who use mobility aids.
- ADA-compliant sills (thermal break and non-thermal break) for swinging doors create a flush surface for easy access to pass through.
- Lever handles for swinging doors are available in a variety of styles and finishes and make operation easier than doors with knobs.
- ADA-compliant sills (thermal break and non-thermal break) for swinging doors create a flush surface for easy access to pass through.

Sliding Doors
- Lever handles for swinging doors are available in a variety of styles and finishes and make operation easier than doors with knobs.
- Aluminum sill ramp kits for Garden-Aire sliding patio doors allow smooth transitioning between the interior and exterior of the home.

Window Opening Control Devices (WOCDS)
Kolbe offers Window Opening Control Devices (WOCDS) that restrict the size of the open window area to less than 4 inches, and feature a limit release mechanism to allow for emergency escape. These devices allow the window to latch into place at a predetermined position and automatically re-latch when closed. The WOCDS meet the ASTMF2090-13 requirements.

WOCDS can be factory applied to Ultra Series Sterling double hungs, XL Sterling double hungs, and Traditional double hungs, and are available in a Satin Nickel finish. WOCDS may also be field-applied to crank-out and push-out casements.

NOTE: This device meets the stringent safety requirement of ASTM F2090-13 if applied per recommendations. Not all windows are available with Window Opening Control Devices. Please ask your local Kolbe dealer about availability.
NATURAL WOOD BEAUTY
EXTERIORS

PRODEMA
NATURAL WOOD BEAUTY.

PRODEX
1 NATURAL WOOD BRINGS YOUR PROJECTS TO LIFE
THE ELEGANCE OF NATURAL WOOD

Our objective is to provide the world of architecture with unique materials that help architects design warm, beautiful, comfortable spaces that improve the quality of life for all.

Energy efficient buildings with the elegance of natural wood.
BOUNDLESS CREATIVITY
PRODEX enters the envelope to broaden design as contracts center with Prodata to create innovative designs, even thought possible. Equipment that allows you more comprehensive control of design, enabling you to explore and define a design that is both beautiful and elegant, and versatile performance.

View of Prodata on each hand to be a source of inspiration for architects. This partnership has translated into prestigious architectural design success, globally.
Harry Parker Boathouse, Boston

2014 AIA Institute Honor Awards for Architecture,
MAINTENANCE FREE
NATURAL WOOD
At Prodem\textsuperscript{a} we specialize in creating natural wood products of the highest quality for the world of architecture and design. Following years of research and development we are proud to offer a unique, innovative and high-tech product with no need for the regular maintenance usually required by other wood exteriors.

We created a highly resistant PVDF outer film that protects PRODEX\textsuperscript{b} from nature’s elements, creating a product which is totally maintenance free. This PVDF film is also anti-graffiti and non-stick, preventing organic matter from developing on the panel’s surface and reducing the build-up of dust and dirt from ambient pollution.
THE CHARACTERISTICS OF NATURAL WOOD

Each PRODEX panel is unique and each wood grain is special, no two panels are alike. When sunlight reflects off the wood fibres the full beauty of natural wood can be observed and facades light up in a range of different tones.
4 COMMITTED TO NATURE
At **Prodema** quality design and innovation are of utmost importance to us. However, our respect for nature is even more important: being both our source of material and our inspiration. At **Prodema** we work to promote sustainable construction by maximizing wellbeing with environmental efficiency in building projects.

Using **Prodema** also provides points in green building certification schemes such as **LEED** (Leadership in Energy and Environmental Design) or **BREEAM** (Building Research Establishment Environmental Assessment Methodology).

**Prodema** also boasts **PEFC** certification, the guarantee that our products have been manufactured with raw forest materials managed in a socially and environmentally responsible way.
Prodex: The Perfect Skin for Ventilated Facades
PRODEX in a ventilated facade is an excellent protective cladding as it prevents rainwater from entering walls and insulation leaving them humidity free thanks to the flow of air behind the panels.

Buildings with a ventilated facade system are well insulated and protected from rainwater throughout the year. They create more comfortable living conditions as temperature variations are reduced to a minimum and energy is saved.

In addition to this, its high quality, versatility, easy installation and minimum maintenance make PRODEX the perfect skin for buildings.

Please refer to the PRODEX technical catalogue for all information needed on installation.
MOUNTING SYSTEMS

Concealed:
The concealed fixing system is available for both walls and ceilings. The attachment system hides behind the panel for those projects requiring an aesthetically smooth facade, free of hardware.

Exposed:
This is the most common mounting system employed with PRODEX panels: simple, strong and more cost-effective than other systems.
CLAPBOARD FACADE

This mounting system transforms your facade into traditional clapboard siding with all the benefits of a ventilated facade.
CURVED FACADES

There are various ways of cladding curved facades with PRODEX panels. The various solutions are detailed in the technical catalogue.
IN THE PRODEX TECHNICAL CATALOGUE ALL THE TECHNICAL SPECIFICATIONS AND POSSIBLE USES FOR THE PRODUCT CAN BE FOUND.

**PANEL COMPOSITION:**

PRODEX panels have a bakelite core covered with a natural wood veneer that is specially treated to ensure maximum resistance.

We have developed an exterior PVDF film with non-stick qualities in order to achieve a maximum level of care for the wood, ensuring panels are protected from moisture, rain, sunlight, and even the build-up of dirt on the panels’ surface.

**MAINTENANCE-FREE:**

PRODEX natural wood panels do not need the regular maintenance other woods for exterior require.

**AESTHETIC:**

PRODEX panels offer the design world the possibility to create natural, living facades with a wide range of tones and creative options available.

**RESISTANCE AND DURABILITY:**

PRODEX panels are the perfect material for cladding facades thanks to the panel’s technical qualities. The panel’s bakelite core means it is possible to adjust the panel’s thickness and its subsequent technical qualities making PRODEX the ideal solution for all types of projects.

PRODEX panels are extremely hard, rendering them perfectly resistant to continuous exposure to sunlight and sharp changes in temperature and humidity.

They also offer a high level of durability against termite attacks and maximum resistance to vandalism.

PRODEX panels also offer excellent dimensional stability.

**CLEANING:**

The PVDF surface prevents dust and all kinds of dirt from sticking to the panel surface, ensuring ease of maintenance and cleaning.

**ANTI-GRAFFITI RESISTANCE:**

The outer chemical non-stick layer impregnated into PRODEX panels prevents aerosol paint from sticking permanently to the surface.

**PANEL DIMENSIONS:**

Length x width: 2.440 mm x 1.220 mm. Thicknesses 6, 8, 10, 12, 14, 16, 18, 20, 22 mm.

**FIRE RATING:**

On request, panels may be supplied with different reactions to fire in line with standard EN 13.501-1:

- PRODEX C - s1, d0
- PRODEX: Class B for North America
- PRODEX IGN B - s1, d0
- PRODEX IGN: Class A for North America
The Architecture of Metal Fabrics
GKD Metal Fabrics are technologically advanced woven metal fabrics suitable to large or small scale applications, both interior and exterior. We provide a complete design-build solution, custom engineering and installing each project with proprietary attachments. Our metal fabrics are manufactured on four continents, adding drama and beauty to great architecture throughout the world.
A Design-Build Solution

A Turnkey Product
When you specify GKD metal fabrics, we will work with you on concept development, design, engineering, fabrication, delivery and on-site installation, including the hardware for attachment. Our team of professionals is accustomed to working worldwide with the most demanding designs and programs, collaborating with your team to realize your vision — without compromise.

For the Long Haul
GKD metal fabrics are the smart choice — environmentally friendly, durable and virtually maintenance-free. Our stainless steel is an energy efficient product to manufacture, made with recycled material as well as being recyclable itself. Non-corrosive, GKD metal fabrics can be simply washed with water if it ever becomes necessary.
Façades

Woven metal façades provide both utility and beauty for any structure, from a parking lot to a museum. Around the world, residences, offices, factories, hospitals, schools and sports facilities are protected and enriched by GKD metal fabrics. The open weaves offer transparency and functionality, enticing from the outside without obscuring views from within, allowing for air circulation while also providing the necessary security.
Solar Management

GKD metal fabric sun screens can help achieve significant energy savings by minimizing heat gain during warm months, while their environmental benefits also support LEED opportunities.
GKD metal fabrics are an ideal solution for safety and security concerns. For railing or balustrade infill they provide security while retaining a light and graceful presence. The material flexibility also facilitates its use on more complex, organic designs.
**Mandarin**

**Product Specifications**
Flexible, two directions

- **Material**: Bronze
- **Open Area**: 37%

PROFUSION WELDED ORNAMENTAL STEEL FENCE

MONTAGE PRODUCTS

- MONTAGE II® | INDUSTRIAL ORNAMENTAL STEEL FENCE
- MONTAGE COMMERCIAL® | COMMERCIAL ORNAMENTAL STEEL FENCE
- MONTAGE PLUS® | ORNAMENTAL STEEL FENCE

The ProFusion welded picket to rail connection is the method used to construct Montage panels, which allows a minimum biasability of 25%, eliminating unsightly stair stepping of panels.

PICKET TO RAIL PROFUSION WELDING
Each picket is welded precisely at each rail connection for ease of installation yet remaining flexible as an all terrain fence.

NO VISIBLE WELDS
Profusion welding techniques are both strong and hidden from view providing a good neighbor profile.

Montage fence panels are fabricated through a WELDING TECHNIQUE that combines laser and fusion technology to create a virtually INVISIBLE STRUCTURAL CONNECTION at every picket to rail intersection. Montage welded steel construction is unmatched in strength and durability.

RAKEABLE VS STAIR-STEP
The Profusion welded picket to rail connection is the method used to construct Montage panels, which allows a minimum biasability of 25%, eliminating unsightly stair stepping of panels.

Built for strength yet a penchant for beauty, Montage II is an industrial grade steel fence that delivers on both levels. Superior welding techniques create a profile that lends itself to landscaping design while maintaining a level of perimeter security that is unmatched.

Montage II gate options vary from swing gates for pedestrian or vehicle access to sliding gates for high functioning points of entry. Each of these gate systems are individually constructed to provide project specific performance.

Major corrosion problems start from the inside. That’s why all products in the Montage® family are COATED INSIDE & OUT. Our GALVANIZED STEEL FRAMEWORK is subjected to a MULTI-STAGE PRE-TREATMENT/WASH (with zinc phosphate), followed by a DUPEX CATHODIC ELECTROCOAT SYSTEM consisting of an EPOXY PRIMER, which significantly increases corrosion protection, and an ACRYLIC TOPCOAT, which provides the protection necessary to WITHSTAND ADVERSE WEATHERING EFFECTS.
