

GENERAL NOTES

- All topographic and existing base information obtained from drawings provided by the City of Portsmouth and from site reconnaissance. Topographic information should be considered approximate.
- Proposed trees and shrubs should be indigenous, low-maintenance, seashore-tolerant species. These plants will require less treatment, watering and maintenance, and will reflect the natural character and history of the island. In general, plantings should be informal and "natural" in appearance. Massing and "clumping" of plants is preferable to formal, rectilinear plantings.
- Approximately 57 existing parking spaces, and 148 proposed parking spaces.
