Groundwater Monitoring Report Cover Sheet

Site Name: Coakley Landfill

Town: North Hampton

Permit #: 198712001

Type of Submittal (*Check all that apply*)

- ☒ Periodic Summary Report (*year*) : 2010
- ☐ Data Submittal (*month and year per Condition #7 of Permit*):

Check each box where the answer to any of the following questions is "YES"

Sampling Results

- ☒ During the most recent monitoring event, were any new compounds detected at any sampling point?
  Well/Compound: Multiple wells/1,4-Dioxane
- ☐ Are there any detections of contamination in drinking water that is untreated prior to use?
  Well/Compound:
  - □ Do compounds detected exceed AGQS?
- ☐ Was free product detected for the first time in any monitoring point?
  - ☐ Surface Water (*visible sheen*)
  - ☐ Groundwater (*1/8" or greater thickness*)
    Location/Thickness:

Contaminant Trends

- ☐ Do sampling results show an increasing concentration trend in any source area monitoring well?
  Well/Compound:
- ☐ Do sampling results indicate an AGQS violation in any of the GMZ boundary wells?
  Well/Compound:

Recommendations

- ☐ Does the report include any recommendations requiring DES action? (*Do not check this box if the only recommendation is to continue with existing permit conditions.*)

This form is to be completed for groundwater monitoring data submittals and periodic summary reports submitted to the New Hampshire Department of Environmental Services Waste Management Division.

TABLE OF CONTENTS

TABLE OF CONTENTS (continued)

1.0 INTRODUCTION

At the request of the Coakley Landfill Group, Provan & Lorber, Inc. has performed post-closure monitoring for the former Coakley Landfill site (the "Site"), located in North Hampton and Greenland, New Hampshire. The Site includes approximately 92-acres located within the towns of North Hampton and Greenland, New Hampshire. The actual landfill covers approximately 27 acres. The Site is located between about 400 to 800 feet west of Lafayette Road (U.S. Rt. 1), south of Breakfast Hill Rd, and about 2.5 miles northeast of the center of the Town of North Hampton, New Hampshire. The Greenland-Rye town line forms a major portion of the eastern boundary of the Site. The landfill borders farmland, undeveloped woodlands and wetlands to the north and west. Commercial and residential properties border the Site to the east and south. Background information has been summarized in numerous previous reports, including the Project Operations Plan (POP), prepared in April 2010 by Golder Associates. A Site Location Map is included as **Figure 1**.

Groundwater monitoring was performed in accordance with the Project Operations Plan (POP) and Environmental Monitoring Plan (EMP) revision 1.0, dated April 2010, with the exception noted below. Copies of the EMP monitoring requirements tables are included in Section 1.

Due to changes in the required sampling procedures, sampling of the three 6-inch diameter wells (MW-6, BP-4, and GZ-125) was not performed in August 2010. Discrete interval sampling of these wells was performed in November 2010. Sampling and monitoring for the full list of required parameters was performed in February 2011.

2.0 AUGUST 2010 MONITORING AND SAMPLING PROCEDURES

2.1 Groundwater Sampling Procedures

Water levels were measured in selected monitoring wells using an electronic water-level indicator prior to sampling. The calculated groundwater elevations are summarized on **Table 1**. Water level measurements were performed on August 16 and 17, 2010. Meters for measurement of field stabilization parameters were calibrated daily with subsequent checks to confirm that calibration had been maintained. Calibration sheets are included in **Section 2**.

Sampling was performed from August 16 – 20, 2010. With the exception noted below for MW-4, monitoring wells were purged and sampled following low flow sampling techniques using dedicated Teflon-lined polyethylene tubing and a peristaltic pump. Prior to sampling, wells were purged at flow rates ranging from 0.1 to 0.5 liters per minute. Purging times ranged from 30 minutes to 3 hours, until stabilization of the following monitoring parameters: temperature, pH, specific conductance, oxidation reduction potential (ORP), dissolved oxygen, and turbidity. Final stabilization readings are included on **Tables 2 and 3**. Field data sheets are included in **Section 2**. Low flow

sampling procedures are further described in the SOP, included in the Site POP. Due to very slow well recharge, drawdown in several wells was greater than the recommended maximum of 0.3 feet. Drawdown measurements are included on the field data sheets in **Section 2**.

Two HydroLab Quanta multimeters, equipped with flow-though cells, were used for measurement of field stabilization parameters. The meters were calibrated at the beginning of each day in accordance with procedures outlined in the POP and manufacturer's procedures. A Lamotte 2020e turbidity meter was calibrated at the beginning of each day and zeroed at each well. Water for measurement of turbidity was obtained using a "T" and valve prior to the flow-through cell. Procedures for measurement of field parameters and stabilization criteria are included in the SOP.

Monitoring wells with screened intervals longer than 10 feet were purged of a minimum of three volumes of the well screened interval. For all wells sampled, purging and sampling was performed with the bottom of the tubing located at approximately the middle of the screened interval of the well. Tubing intake depths are summarized on the sampling requirements **Table 2-1** from the EMP, included in **Section 1** for reference. For collection of samples, the flow-through cell was removed and water was obtained immediately after the peristaltic pump. Samples were also collected from domestic wells R-3 and R-5, located at 399 and 364 Breakfast Hill Road, respectively. The water was allowed to run for approximately 10 minutes prior to sampling. Measurements were collected for the above-described stabilization parameters.

The depth to water in well MW-4 was too great to allow sampling using the peristaltic pump. Therefore, MW-4 was purged and sampled using a dedicated disposable bailer. Purging of MW-4 was performed by very slowly lowering and withdrawing the bailer from the water column to minimize disturbance of the well. Stabilization parameters were obtained by filling the Quanta calibration cup with water from the well.

Upon collection, each water sample was placed in pre-cleaned laboratory-supplied glassware and plastic containers, preserved as appropriate for target compounds. Samples for analysis of dissolved metals were field filtered with one-time use in-line 0.45-micron filters prior to preservation. Samples were packaged on ice in a shipping cooler and delivered to Eastern Analytical Inc. in Concord, NH for laboratory analysis as outlined in the EMP. Sample locations are illustrated on **Figure 2 – Site Plan**.

2.2 Surface Water and Sediment Sampling Procedures

In accordance with EMP dated April 2010, sediment sampling at the Site was reduced to once every 5 years, with the next sediment sampling to be performed in 2014. Therefore, sediment sampling was not performed in August 2010.

The leachate sample was collected by submersing a dedicated disposable bailer at the sample location. The intake point for the bailer was maintained at a point below the top of the water but above the underlying sediments to minimize the intake of sediments

and/or floating materials. The water was then decanted into the appropriate containers for sample preservation. Samples were packaged on ice in a shipping cooler and delivered to Eastern Analytical Inc. for laboratory analysis. Following collection of the samples for laboratory analysis, field measurements were collected for temperature, pH, specific conductance, ORP, and dissolved oxygen by placing the instrument probe directly into the water. The sample for testing of turbidity was collected by submersing the testing vial into the surface water to collect the sample.

Surface water sample locations SW-4, SW-5, and SW-103 were dry in August 2010 and therefore surface water samples could not be collected at these locations. Leachate and surface water sample locations are indicated on **Figure 2**.

2.3 Quality Control Samples

Duplicate samples were collected from MW-5S and AE-3B and analyzed for volatile organic compounds (VOCs), total 23 TAL metals, and for dissolved iron and manganese. The duplicate sample from MW-5S was also analyzed for 1,4-dioxane, ethylene dibromide (EDB), and dibromochloropropane (DBCP).

Matrix spike (MS) and matrix spike duplicate (MSD) samples were also collected from MW-5S and AE-3B for use in QA/QC for VOCs, total TAL metals, and dissolved iron and manganese. The MS and MSD samples collected from MW-5S were also used for QA/QC for 1,4-dioxane, EDB, and DBCP.

A duplicate sample was collected from the leachate location (L-1) and analyzed for COD, and ammonia. MS and MSD samples were also collected from L-1 for use in QA/QC for ammonia. All duplicate, MS, and MDS samples were collected immediately following collection of the primary sample for the same analysis and following the same sampling procedures.

Field blanks were collected following sampling of wells MW-5S and AE-3B. Samples were collected by pouring deionized water into the sample containers and the samples were placed with the other samples collected from the Site. The field blank samples for analysis of dissolved metals were filtered using a 0.45-micron filter prior to placement in the sample container. Both field blank samples were analyzed for VOCs, total TAL metals, and for dissolved iron and manganese. The field blank sample collected after well MW-5S was also analyzed for 1,4-dioxane, EDB, and DBCP.

A Tubing equipment rinse blank was collected by filling a section of new tubing with deionized water. The water was allowed to remain in the tubing for approximately 5 minutes and then placed into the sample containers. The tubing equipment blank was analyzed for VOCs, total TAL metals, dissolved iron and manganese, 1,4-dioxane, EDB, and DBCP.

Each set of samples sent to the laboratory was accompanied by a trip blank that was analyzed for VOCs and 1,4-dioxane.

An EPA Region I, Tier I data validation was performed for the laboratory analytical data by *Quality Assurance Associates, LLC.*

3.0 NOVEMBER 2010 SAMPLING PROCEDURES

A proposed scope of work for sampling of monitoring wells BP-4, MW-6, and GZ-125, dated October 18, 2010 was prepared by Provan & Lorber and conditionally approved by the EPA in a letter dated October 21, 2010. A revised SOP was submitted on October 25, 2010.

3.1 Sampling Procedures

On November 9 & 10, 2010, discrete interval sampling of BP-4, MW-6, and GZ-125 was performed to determine the optimal depth for future sampling of these wells, as outlined in the proposed scope of work dated October 25, 2010 and accompanying Standard Operating Procedure.

Samples were collected at 10-foot intervals in well BP-4 from 39 to 89 feet and at 97 feet, as proposed. Samples were collected at 10-foot intervals in well MW-6 from 30 to 160 feet. Well MW-6 appeared to be filled in at a depth of 167 feet below grade. Therefore, the proposed 170-foot and 180-foot samples could not be collected. Samples were collected at 10-foot intervals in well GZ-125 from 62 to 182 feet. Sampler refusal appeared to occur below this depth and the proposed 192-foot sample could not be collected. However, floating of the sampler appeared to also be occurring, making continued lowering of the sampler difficult. This appeared to be due to the length of air-filled tubing connected to the sampler.

All sampling was performed using a 1.66" x 2' Solinst® Discrete Interval Sampler which was pressurized using a bicycle pump following the procedures outlined in the SOP included in the October 25, 2010 proposed procedures.

Upon collection, each water sample was placed in pre-cleaned laboratory-supplied 4-ounce plastic containers containing nitric acid as a preservative. Samples were packaged on ice in a shipping cooler and delivered to Eastern Analytical Inc. in Concord, NH for laboratory analysis of total arsenic and manganese.

3.2 Quality Control Samples

Duplicate, matrix spike, and matrix spike duplicate samples were collected from BP-4 at a depth of 49 feet and from MW-6 at a depth of 60 feet. Field blank samples were prepared following sampling of BP-4 at 97 feet and MW-6 at 90 feet. An equipment blank sample was collected following collection of the final sample from BP-4 and standard equipment decontamination. All QA/QC samples were analyzed for total arsenic and manganese.

Following collection of the sample from MW-6 at a depth of 160 feet, the sampler was prepared for collection of the 170-foot sample. The sampler was lowered to the total depth of the well. Following determination that the 170-foot sample could not be collected, the sampler was returned to the surface without depressurizing. Once at the surface, the sampler pressure was released and the sampler opened. The sampler was observed to be empty, confirming that water had not entered the sampler during the lowering or raising process. This process confirmed that water was only entering the sampler at the desired sampling depth during depressurization of the sampler.

An EPA Region I, Tier I data validation was performed for the laboratory analytical data by *Quality Assurance Associates, LLC.*

4.0 FEBRUARY 2011 MONITORING AND SAMPLING PROCEDURES

In response to the November 2010 discrete interval sampling, the EPA and NHDES requested modifications to the Discrete Interval Sampler SOP. Based on these letters and results of the November 2010 sampling, recommendations for subsequent sampling depths and a revised SOP were prepared by Provan & Lorber, dated January 24, 2011. The proposed sampling depths and revised SOP were approved by the EPA in a letter dated January 28, 2011.

4.1 Sampling Procedures

On February 8, 2011, sampling of BP-4, MW-6, and GZ-125 was performed. Prior to sampling, the depth to water was measured for determination of the sampler pressurization requirements. Samples were collected at a depth of 49 feet in BP-4, at a depth of 150 feet in MW-6, and at a depth of 72 feet in GZ-125 using a 1.66" x 2' Solinst® Discrete Interval Sampler which was pressurized using a cylinder of compressed nitrogen following the procedures outlined in the January 24, 2011 proposed SOP. A larger sampler was not available. Therefore, due to the limited volume of the sampler, multiple deployments of the sampler were required at each well to fill the sample containers and collect field measurements. The sampler was lowered approximately one foot lower during each subsequent deployment.

Upon collection, each water sample was placed in pre-cleaned laboratory glassware and plastic containers, preserved as appropriate for target compounds. Samples for VOCs analyses were collected first, followed by samples for metals analyses. Samples for analysis of dissolved metals were field filtered with one-time use 0.45-micron filters prior to preservation. Samples were packaged on ice in a shipping cooler and delivered to Eastern Analytical Inc. in Concord, NH for laboratory analysis. Samples were analyzed following the schedule outlined in the EMP, included in **Section 1**.

Following collection of samples for laboratory analyses, field monitoring for the following parameters was performed: temperature, pH, specific conductance, oxidation

reduction potential (ORP), dissolved oxygen, and turbidity. Field readings are included on **Tables 2 and 3**. Field data sheets are included in **Section 2**.

4.2 Quality Control Samples

Duplicate samples were collected from GZ-125 and analyzed for VOCs, total 23 TAL metals, and for dissolved iron and manganese. Duplicate samples were collected from BP-4 and analyzed for 1,4-dioxane, EDB, and DBCP.

MS and MSD samples were also collected from GZ-125 for use in QA/QC for VOCs, total TAL metals, and dissolved iron and manganese. MS and MSD samples were collected from BP-4 for used in QA/QC for 1,4-dioxane, EDB, and DBCP.

Following sampling of GZ-125 and decontamination, an equipment blank was collected from the sampler by pouring deionized water into the top of the sampler and dispensing the water through the bottom of the sampler into the sample containers, as outlined in the Discrete Interval Sampler SOP. The equipment blank sample for analysis of dissolved metals was filtered using a 0.45-micron filter prior to placement in the sample container.

A field blank was prepared following preparation of the equipment blank. The sample was collected by pouring deionized water into the sample containers and the samples were placed with the other samples collected from the Site. Both the field blank and equipment blank samples were analyzed for VOCs, total TAL metals, dissolved iron and manganese, 1,4-dioxane, EDB, and DBCP.

The samples were also accompanied by trip blanks that were analyzed for VOCs, 1,4-dioxane, EDB, and DBCP.

An EPA Region I, Tier I data validation was performed for the laboratory analytical data by *Quality Assurance Associates, LLC*.

5.0 FINDINGS

5.1 Discrete Interval Sampling Results

Water collected from all the samples from BP-4 was clear. All samples collected from MW-6 were orange and cloudy. Sediments were observed in the sample containers after a period of time following sample collection and the sampled water appeared fairly clear after sitting for several hours. The majority of the sediments would be consistent with rust particles scraped from the well casing in the upper portion of well during lowering of the sampler. Some orange cloudiness was observed in all samples collected from GZ-125, with increased cloudiness observed in the uppermost samples.

Concentrations of arsenic and manganese in BP-4 were fairly consistent throughout the depth of the well. Slightly higher arsenic concentrations were obtained at a depth of 49

feet. Concentrations of manganese in MW-6 were greatest at depths of 130 to 160 feet. Concentrations of arsenic were greatest from 110 to 160 feet, with the highest concentration at 150 feet. Concentrations of manganese in GZ-125 were greatest at 72 and 82 feet. Concentrations of arsenic were at or below the laboratory reporting limit for samples collected from GZ-125. Analytical results of the discrete interval sampling for the three 6-inch diameter wells are summarized on **Table 6**. The laboratory report is included in **Section 3**.

5.2 EMP Monitoring Groundwater Results

The general groundwater flow direction was determined to be westerly to northwesterly in both the overburden and bedrock wells. Groundwater contours constructed from the August 2010 water table data for overburden wells and bedrock wells are illustrated in **Figures 3 and 4**, respectively. Groundwater elevations decreased an average of 1.30 feet in overburden wells and an average of 1.33 feet in bedrock wells between the August 2009 and August 2010 sampling events. An upward hydraulic gradient was observed at well pairs MW-5S/5D, AE-2A/B, AE-3A/B, FPC-2A/B, FPC-5A/B, FPC-6A/B, FPC-11A/B and GZ-123/GZ-125. Downward hydraulic gradients were observed in well pairs AE-1A/B, AE-4A/B, FPC-7A/B, and FPC-8A/B.

Concentrations of arsenic exceeded the interim cleanup level (ICL) in Operable Unit 1 (OU-1) in the following wells: MW-4, MW-5S, MW-5D, MW-8, MW-9, MW-10, MW-11, OP-2, OP-5, and BP-4.

Concentrations of manganese exceeded the ICL in OU-1 in the following wells: MW-4, MW-5S, MW-5D, MW-6, MW-8, MW-9, MW-10, MW-11, OP-2, OP-5, and BP-4.

The concentrations of benzene and tetrahydrofuran exceeded the ICL in OU-1 well MW-8.

Concentrations of arsenic exceeded the ICL in Operable Unit 2 (OU-2) in the following wells: FPC-5A, FPC-6A, FPC-9A, FPC-11B, GZ-105, AE-1A, AE-2A, AE-2B, AE-3A, and AE-3B.

Concentrations of manganese exceeded the ICL in OU-2 in the following wells: FPC-2A, FPC-6A, FPC-6B, FPC-11A, FPC-11B, GZ-105, GZ-123, AE-1A, AE-1B, AE-2A, AE-2B, AE-3A, and AE-3B.

The concentration of benzene exceeded the ICL in OU-2 well GZ-105.

Concentrations of dissolved manganese were typically equal to or slightly less than concentrations of total manganese. Concentrations of dissolved metals exceeded ICLs where concentrations of total metals exceeded ICLs. Concentrations of dissolved iron were equal to or less than concentrations of total iron. For some wells, concentrations of dissolved iron were significantly less than concentrations of total iron, while for other wells total and dissolved iron concentrations were similar.

1,4-Dioxane was detected in samples collected from 13 of 15 monitoring wells at concentrations as high as 230 micrograms per liter (µg/l). Concentrations of 1,4-dioxane were generally greater in bedrock wells, compared to adjacent overburden wells. An Interim Cleanup Level (ICL) has not been established for this site for 1,4-dioxane. However, the New Hampshire Ambient Groundwater Quality Standard (AGQS) for 1,4-dioxane is 3 µg/l.

Ethylene dibromide (EDB) and dibromochloropropane (DBCP) were not detected at the lower detection limits by EPA Method 8011/504.

Groundwater analytical results for OU-1 and OU-2 wells are summarized on **Tables 2 and 3**, respectively. Target compounds were not detected in the samples collected from the residential wells. Residential well results are summarized on **Table 4**. The laboratory reports are included in **Section 3**.

The lateral distributions of arsenic and manganese in overburden and bedrock wells are illustrated on **Figures 5 through 8**. Graphs illustrating contaminant concentrations over time for arsenic, manganese, and benzene in selected wells are included in **Section 4**. The lateral distributions of 1,4-dioxane in overburden and bedrock wells are illustrated on **Figure 9**.

5.3 Surface Water Results

Concentrations of iron and ammonia exceeded the DES chronic surface water standards at leachate location L-1. The concentration of ammonia was below the acute surface water standard. An acute surface water standard has not been established for iron.

1,4-Dioxane was detected in the leachate sample at a concentration of 20 µg/l, exceeded the New Hampshire AGQS. A site-specific ICL has not been established for 1,4-dioxane. EDB and DBCP were not detected.

Leachate results are summarized on **Table 5**. The laboratory reports are included in **Section 3**. Surface water sample locations SW-4, SW-5, and SW-103 were dry in August 2010 and therefore could not be sampled.

5.4 Quality Control Sample Results

Variations in duplicate samples met accepted criteria. Target compounds were not detected in any of the trip blank samples.

Methylene Chloride was detected in the tubing blank and field blank samples prepared on August 19, 2010 at concentrations of 12 µg/l and 11 µg/l, respectively. Methylene Chloride was detected in the field blank sample prepared on August 20, 2010 at a concentration of 9 µg/l. Methylene Chloride was not detected in groundwater samples collected at the Site.

Calcium was detected in the tubing blank and field blank samples prepared on August 19, 2010 at concentrations of 0.09 mg/l and 0.09 mg/l, respectively. Calcium was detected in the field blank sample prepared on August 20, 2010 at a concentration of 0.07 mg/l. The lowest concentration of calcium detected in groundwater samples collected for the Site was 4.7 mg/l, considerably above the concentrations detected in the blank samples.

5.5 Data Validation Review

Sample GW-FPC-8B-0810 was collected on 8/19/10, but was reported on the laboratory report as sampled on 8/17/10. Sample DW-R-3-0810 was collected on 8/17/10, but was reported as sampled on 8/19/10. Metals raw data was missing from the original laboratory report for the February 8, 2011 sampling event. This data was subsequently supplied by the laboratory and is included with the original laboratory report. The data validation reports are included in **Section 6**.

6.0 TRENDS AND CLEANUP PROGRESS

Concentrations of manganese exceeded ICLs in samples collected from all eleven monitoring wells in OU-1. Concentrations of arsenic exceeded ICLs in samples collected from 10 of the 11 wells in OU-1. The concentrations of benzene and tetrahydrofuran exceeded the ICL in OU-1 well MW-8.

Concentrations of manganese exceeded ICLs in samples collected from 13 of the 25 monitoring wells in OU-2. Concentrations of arsenic equaled or exceeded ICLs in samples collected from 10 of the 25 wells in OU-2. The concentration of benzene exceeded the ICL in OU-2 well GZ-105.

The lateral distributions of arsenic and manganese in overburden and bedrock wells are illustrated on **Figures 5 through 8**. Graphs illustrating contaminant concentrations over time for arsenic, manganese, and benzene in selected wells are included in **Section 4**. Concentrations of arsenic increased in 17 wells and decreased in 5 wells relative to the 2009 sampling event. Concentrations of manganese increased in 15 wells and decreased in 17 wells relative to the 2009 sampling event.

Mann-Kendall data evaluations were performed to examine trends for arsenic, manganese, and benzene concentrations in selected wells. The evaluation performs a statistical analysis of the data to determine increasing or decreasing trends in contaminant concentrations at the particular sampling point and a confidence level for the trend. A confidence level less than 70% is treated as “No Trend”.

The evaluation was performed for arsenic at 19 wells, for manganese at 19 wells, and for benzene at 5 wells, with these wells and compounds corresponding to the graphs of concentrations versus time included in **Section 4**. Data collected in February 2011 is shown as included in the August 2010 sampling event. This change of date does not affect the trend analysis. The most recent 16 data sets were used. Where the target

compound was not detected, a value of one-half of the laboratory reporting limit was used.

For arsenic, decreasing trends were calculated for 10 wells, increasing trends for 6 wells, and no trend for 3 wells. For manganese, decreasing trends were calculated for 13 wells, increasing trends for 4 wells, and no trend for 2 wells. For benzene, decreasing trends were observed for all 5 wells. Overall, contaminant concentrations in groundwater at the Site show a decreasing trend. No correlation between trends for arsenic and manganese within the same well, well pairs, or spatially were noted. Data sheets for the Mann-Kendall evaluation are included in **Section 5**. A summary of results by wells and compounds is also included.

1,4-Dioxane was detected in samples collected from 11 of 15 monitoring wells at concentrations exceeding the New Hampshire AGQS. An ICL has not been established for this Site. Concentrations of 1,4-dioxane were generally greater in bedrock wells, compared to adjacent overburden wells.

7.0 SUMMARY AND CONCLUSIONS

Based on data collected at the Site during 2010 and February 2011, Provan & Lorber concludes the following:

- Water samples were collected from 33 monitoring wells, 1 leachate location, and 2 domestic wells in August 2010. The 3 surface water locations were dry and therefore could not be sampled.
- Discrete interval sampling was performed for the three 6-inch diameter monitoring wells in November 2010 to determine the best sampling depth for future sampling events.
- Concentrations of arsenic and manganese were fairly consistent throughout the depth of the three 6-inch monitoring wells. Slightly higher concentrations were observed at depths of 49 feet in BP-4, at 130 to 160 feet in MW-6, and at 72 and 82 feet in GZ-125.
- Sampling of the three 6-inch monitoring wells was performed in February 2011.
- Groundwater flows in both overburden and bedrock wells were calculated to be westerly to northwesterly during the August 2010 monitoring event, consistent with previous monitoring events.
- An upward hydraulic gradient was observed at well pairs MW-5S/5D, FPC-2A/B, FPC-5A/B, FPC-6A/B, FPC-11A/B, AE-2A/B, AE-3A/B, and GZ-123/GZ-125. Downward hydraulic gradients were observed in well pairs FPC-7A/B, FPC-8A/B, AE-1A/B, and AE-4A/B.
- Interim cleanup levels (ICLs) were exceeded in samples collected from all eleven (11) monitoring wells in Operable Unit #1. ICLs were exceeded in samples collected

from fifteen (15) of twenty five (25) monitoring wells in Operable Unit #2. The most common exceedences were for arsenic and manganese. Exceedences were also noted for benzene and tetrahydrofuran.

- 1,4-Dioxane was detected in 11 of 15 samples from monitoring wells and in the leachate sample at concentrations exceeding the New Hampshire AGQS. An ICL has not been established for the site. EDB and DBCP were not detected.
- Mann-Kendall data evaluations were performed for arsenic at 19 wells, for manganese at 19 wells, and for benzene at 5 wells, with data from the most recent 16 sampling events used.
- For arsenic, decreasing trends were calculated for 10 wells, increasing trends for 6 wells, and no trend for 3 wells. For manganese, decreasing trends were calculated for 13 wells, increasing trends for 4 wells, and no trend for 2 wells. For benzene, decreasing trends were observed for all 5 wells.
- Overall, contaminant concentrations in groundwater at the Site show a decreasing trend. No correlation between trends for arsenic and manganese within the same well, well pairs, or spatially were noted.
- NHDES surface water standards were exceeded for iron and ammonia in the leachate sample collected in 2010. 1,4-Dioxane was detected in the leachate sample at a concentration exceeding the New Hampshire AGQS.
- Surface water locations SW-4, SW-5, and SW-103 were dry and therefore could not be sampled in August 2010.
- Variations in duplicate samples met accepted criteria. Target compounds were not detected in any of the trip blank samples.
- Methylene chloride was detected in the tubing blank sample and both field blank samples at similar concentrations. Methylene chloride was not detected in any groundwater samples collected at the Site.
- Calcium was detected in tubing and trip blank samples at concentrations as high as 0.09 mg/l. The lowest concentration of calcium detected in groundwater samples collected at the Site was 4.7 mg/l, considerably above the concentration detected in the blank samples.
- Based on this data, cross contamination does not appear to be an issue for the Site. The presence of methylene chloride and/or calcium in the blank samples does not appear to impact the conclusions for the Site.

8.0 RECOMMENDATIONS

Based on data collected at the Site, Provan & Lorber recommends the following:

- In accordance with the current monitoring plan, the next monitoring event should be scheduled for August 2011.

- Additional analyses for 1,4-dioxane should be performed. To further characterize the extent of impact and monitor temporal trends, we recommend the sampling of overburden wells MW-4, MW-5S, MW-9, FPC-5A, FPC-7A, FPC-8A, AE-1A, AE-3A, OP-5, and OP-2 and bedrock wells BP-4, MW-5D, MW-6, MW-8, MW-11, FPC-5A, FPC-7A, FPC-8B, AE-1B, AE-2B, and AE-3B for 1,4-dioxane during the August 2011 sampling event.
- No further analysis for EDB and DBCP is recommended.

If you have any questions, please do not hesitate to call me at (603) 746-3220.

Sincerely,

Kevin McKibben

Kevin McKibben, P.G.

NOTES:
1. Shaded data denotes a bedrock monitoring well.
2. A blank indicates data was not collected.
3. GW.EL. indicates groundwater elevation and FT. indicates measurements were in feet.
4. Well Screened intervals from surface grade.

NOTES:
1. NA = Sample was not analyzed for indicated parameter
   BDL = Below Detection Limit
   Bolded wells denote bedrock wells.
2. A blank indicates data was not collected.
3. Bolded contaminants are site contaminants of concern for which interim cleanup standards (ICLs) have been established.
4. Shaded values denote exceedance of an established interim cleanup level.
5. Volatile organic compound and metals results are in micrograms per liter (ug/l).
6. Field Parameter Units: us/cm = microsiemens per centimeter, mg/l = milligram per liter, NTU = nephelometric turbidity unit, mV = millivolt

NOTES:
1. NA = Sample was not analyzed for indicated parameter
   BDL = Below Detection Limit
   Bolded wells denote bedrock wells.
2. A blank indicates data was not collected.
3. Bolded contaminants are site contaminants of concern for which interim cleanup standards (ICLs) have been established.
4. Shaded values denote exceedance of an established interim cleanup level.
5. Volatile organic compound and metals results are in micrograms per liter (ug/l).
6. Field Parameter Units: us/cm = microsiemens per centimeter, mg/l = milligram per liter, NTU = nephelometric turbidity unit, mV = millivolt
* Data obtaiend from previous reports and appears to be in error.

NOTES:
1. NA = Sample was not analyzed for indicated parameter
   BDL = Below Detection Limit
2. Bolded well denotes a bedrock groundwater monitoring well.
3. Blank column indicates the well was not sampled.
4. Potential ICLs are indicated for arsenic and maganese.
5. Shaded values denote exceedance of an established interim cleanup level.
6. Volatile organic compound and metals results are in micrograms per liter (ug/l).
7. Field Parameter Units: us/cm = microsiemens per centimeter, mg/l = milligram per liter, NTU = nephelometric turbidity unit, mV = millivolt

NOTES:
1. NA = Sample was not analyzed for indicated parameter
   BDL = Below Detection Limit
2. Bolded well denotes a bedrock groundwater monitoring well.
3. Blank column indicates the well was not sampled.
4. Potential ICLs are indicated for arsenic and maganese.
5. Shaded values denote exceedance of an established interim cleanup level.
6. Volatile organic compound and metals results are in micrograms per liter (ug/l).
7. Field Parameter Units: us/cm = microsiemens per centimeter, mg/l = milligram per liter, NTU = nephelometric turbidity unit, mV = millivolt

NOTES:

1. BDL = Below Method Detection Limit
2. Only contaminants detected in one or more leachate samples are listed in this table.
3. Acute surface water standard shown for ammonia is for a surface water with a pH of 7.0.
4. (1) = Criteria for these metals are expressed as a function of the water effect ration (WER) as defined in 40 CFR 131.36 c, the values displayed in this table correspond to a WER of 1.0.
5. A bold entry indicates the parameter exceeded the acute surface water standard.
6. Shaded values indicate the parameter exceeded the chronic surface water standard.
7. Bold and shaded values indicate exceedances of both NHDES acute and chronic criteria.
7. NSE indicates no standard has been established for the indicated parameter.
8. Volatile organic compounds and metals results are in micrograms per liter (µg/l).

Notes:
1. Water level highs and lows based on data taken between April 1993 and August 2006 and reported in the 2006 Annual Monitoring Report on Operable Units 1 and 2 prepared by Aries Engineering, June 2007. Water levels were not taken in every well at every event.
2. * = value is assumed.

ACCREDITED IN ACCORDANCE WITH nelac

Kevin McKibben
Provan & Lorber (Co)
PO Box 389
Contoocook , NH 03229

Subject: Laboratory Report

Eastern Analytical, Inc. ID: 91943
Client Identification: Coakley Landfill | P0081
Date Received: 8/17/2010

Dear Mr. McKibben :

Enclosed please find the laboratory report for the above identified project. All analyses were performed in accordance with our QA/QC Program. Unless otherwise stated, holding times, preservation techniques, container types, and sample conditions adhered to EPA Protocol. Samples which were collected by Eastern Analytical, Inc. (EAI) were collected in accordance with approved EPA procedures. Eastern Analytical, Inc. certifies that the enclosed test results meet all requirements of NELAP and other applicable state certifications. Please refer to our website at www.eailabs.com for a copy of our NELAP certificate and accredited parameters.

The following standard abbreviations and conventions apply to all EAI reports:

Solid samples are reported on a dry weight basis, unless otherwise noted
< : "less than" followed by the reporting limit
> : "greater than" followed by the reporting limit
%R : % Recovery

Eastern Analytical Inc. maintains certification in the following states: Connecticut (PH-0492), Maine (NH005), Massachusetts (M-NH005), New Hampshire/NELAP (1012), Rhode Island (269) and Vermont (VT1012).

The following information is contained within this report: Sample Conditions summary, Analytical Results/Data, Quality Control data (if requested) and copies of the Chain of Custody. This report may not be reproduced except in full, without the the written approval of the laboratory.

If you have any questions regarding the results contained within, please feel free to directly contact me or the chemist(s) who performed the testing in question. Unless otherwise requested, we will dispose of the sample(s) 30 days from the sample receipt date.

We appreciate this opportunity to be of service and look forward to your continued patronage.

Sincerely,

Lorraine Olashaw — Lorraine Olashaw, Lab Director

Samples were properly preserved and the pH measured when applicable unless otherwise noted. Analysis of solids for pH, Flashpoint, Ignitibility, Paint Filter, Corrosivity, Conductivity and Specific Gravity are reported on an "as received" basis.

All results contained in this report relate only to the above listed samples.

Toluene-d8 (surr)	99 %R	101 %R	101 %R	8/19/2010	% Rec	70 - 130	20	8260B

Samples were extracted and analyzed within holding time limits.
Instrumentation was calibrated in accordance with the method requirements.
The method blanks were free of contamination at the reporting limits.
Sample surrogate recoveries met the above stated criteria.
The associated matrix spikes and/or Laboratory Control Samples met acceptance criteria.
There were no exceptions in the analyses, unless noted.
* Flagged analyte recoveries deviated from the QA/QC limits.

Analytes that exceed the acceptance limits high in the quality control samples but are not detected in the field samples do not impact the data. For analytes that show low recovery in the quality control samples and are not detected in the field samples, a low point calibration standard is analyzed to support the reporting limit. Samples with IsoPropylbenzene were reanalyzed for that analyte.

Toluene-d8 (surr)	97 %R	102 %R	100 %R	8/26/2010	% Rec	70 - 130	20	8260B

Samples were extracted and analyzed within holding time limits.
Instrumentation was calibrated in accordance with the method requirements.
The method blanks were free of contamination at the reporting limits.
Sample surrogate recoveries met the above stated criteria.
The associated matrix spikes and/or Laboratory Control Samples met acceptance criteria.
There were no exceptions in the analyses, unless noted.
* Flagged analyte recoveries deviated from the QA/QC limits.

Analytes that exceed the acceptance limits high in the quality control samples but are not detected in the field samples do not impact the data. For analytes that show low recovery in the quality control samples and are not detected in the field samples, a low point calibration standard is analyzed to support the reporting limit.

1,3,5-Trichlorobenzene	< 1	* 21 (%R)	* 22 (%R) (RPD)	8/27/2010	ug/l	70 - 130	20	8260B
1,2,4-Trichlorobenzene	< 1	22 (111 %R)	23 (114 %R) (3 RPD)	8/27/2010	ug/l	70 - 130	20	8260B
Hexachlorobutadiene	< 0.5	19 (95 %R)	20 (99 %R) (4 RPD)	8/27/2010	ug/l	70 - 130	20	8260B
Naphthalene	< 5	19 (96 %R)	21 (103 %R) (7 RPD)	8/27/2010	ug/l	70 - 130	20	8260B
1,2,3-Trichlorobenzene	< 1	20 (99 %R)	21 (105 %R) (6 RPD)	8/27/2010	ug/l	70 - 130	20	8260B
4-Bromofluorobenzene (surr)	95 %R	102 %R	101 %R	8/27/2010	% Rec	86 - 115	20	8260B
1,2-Dichlorobenzene-d4 (surr)	101 %R	97 %R	98 %R	8/27/2010	% Rec	80 - 120	20	8260B
Toluene-d8 (surr)	96 %R	98 %R	97 %R	8/27/2010	% Rec	70 - 130	20	8260B

Samples were extracted and analyzed within holding time limits.
Instrumentation was calibrated in accordance with the method requirements.
The method blanks were free of contamination at the reporting limits.
Sample surrogate recoveries met the above stated criteria.
The associated matrix spikes and/or Laboratory Control Samples met acceptance criteria.
There were no exceptions in the analyses, unless noted.
* Flagged analyte recoveries deviated from the QA/QC limits.

Analytes that exceed the acceptance limits high in the quality control samples but are not detected in the field samples do not impact the data. For analytes that show low recovery in the quality control samples and are not detected in the field samples, a low point calibration standard is analyzed to support the reporting limit.

Zinc	< 0.005	1.0 (102 %R)		mg/L	8/19/10	85 - 115	20	200.8

Samples were analyzed within holding times unless noted on the sample results page.
Instrumentation was calibrated in accordance with the method requirements.
The method blanks were free of contamination at the reporting limits.
The associated matrix spikes and/or Laboratory Control Samples met the above stated criteria.
Exceptions to the above statements are flagged or noted above or on the QC Narrative page.
* Flagged analyte recoveries deviated from the QA/QC limits.

4VID0723
All linear to 300ug/L (including VA, acrolein and 2CEVE) except: 1500ug/L for TBA; 600ug/L for MTBE and 1,4-dioxane; 400ug/L for mp-x; 200ug/L for gases, t13DCPE and iso-pb; 50ug/L for VC
Low point for VC is 0.2, Low point for 11DCE, 11DCA, PCE, HCBD, BDCM is 0.5.
Low point for cis- and trans-13DCPE 2ppb. Low level analysis for these analytes will need to be run under a different curve.

All avg RF except for:
22DCPA, CCl4, BDCM, 2CEVE, t-13DCPE, bromoform, 12DB3CPA, and 25DBT (linear regression)
Second source met 20% Dev. for all compounds except: Freon-113 and 1,4-dioxane (OOC high) which will need to be rerun under a curve in control for these compounds. 14-dioxane did not meet 8260 criteria for average RF or linear regression and is for qualitative purposes only. IM and CT compound not included in this calibration.

eastern analytical, inc.
professional laboratory services

Kevin McKibben
Provan & Lorber (Co)
PO Box 389
Contoocook , NH 03229

Subject: Laboratory Report

Eastern Analytical, Inc. ID: 92049
Client Identification: Coakley Landfill | P0081
Date Received: 8/19/2010

Dear Mr. McKibben :

Enclosed please find the laboratory report for the above identified project. All analyses were performed in accordance with our QA/QC Program. Unless otherwise stated, holding times, preservation techniques, container types, and sample conditions adhered to EPA Protocol. Samples which were collected by Eastern Analytical, Inc. (EAI) were collected in accordance with approved EPA procedures. Eastern Analytical, Inc. certifies that the enclosed test results meet all requirements of NELAP and other applicable state certifications. Please refer to our website at www.eailabs.com for a copy of our NELAP certificate and accredited parameters.

The following standard abbreviations and conventions apply to all EAI reports:
Solid samples are reported on a dry weight basis, unless otherwise noted
< : "less than" followed by the reporting limit
> : "greater than" followed by the reporting limit
%R : % Recovery

Eastern Analytical Inc. maintains certification in the following states: Connecticut (PH-0492), Maine (NH005), Massachusetts (M-NH005), New Hampshire/NELAP (1012), Rhode Island (269) and Vermont (VT1012).

The following information is contained within this report: Sample Conditions summary, Analytical Results/Data, Quality Control data (if requested) and copies of the Chain of Custody. This report may not be reproduced except in full, without the the written approval of the laboratory.

If you have any questions regarding the results contained within, please feel free to directly contact me or the chemist(s) who performed the testing in question. Unless otherwise requested, we will dispose of the sample(s) 30 days from the sample receipt date.

We appreciate this opportunity to be of service and look forward to your continued patronage.

Sincerely,

Lorraine Olashaw
Lorraine Olashaw, Lab Director

Toluene-d8 (surr)	97 %R	100 %R	99 %R	8/25/2010	% Rec	70 - 130	20	8260B

Samples were extracted and analyzed within holding time limits.
Instrumentation was calibrated in accordance with the method requirements.
The method blanks were free of contamination at the reporting limits.
Sample surrogate recoveries met the above stated criteria.
The associated matrix spikes and/or Laboratory Control Samples met acceptance criteria.
There were no exceptions in the analyses, unless noted.
* Flagged analyte recoveries deviated from the QA/QC limits.

Toluene-d8 (surr)	96 %R	98 %R	97 %R	8/27/2010	% Rec	70 - 130	20	8260B

Samples were extracted and analyzed within holding time limits.
Instrumentation was calibrated in accordance with the method requirements.
The method blanks were free of contamination at the reporting limits.
Sample surrogate recoveries met the above stated criteria.
The associated matrix spikes and/or Laboratory Control Samples met acceptance criteria.
There were no exceptions in the analyses, unless noted.
* Flagged analyte recoveries deviated from the QA/QC limits.

1,2,3-Trichlorobenzene	92049.17	< 1	19 (96 %R)	21 (104 %R) (8 RPD)	8/27/2010	ug/l	70 - 130	20	8260B
4-Bromofluorobenzene (surr)	92049.17	100 %R	103 %R	102 %R	8/27/2010	% Rec	86 - 115	20	8260B
1,2-Dichlorobenzene-d4 (surr)	92049.17	101 %R	98 %R	101 %R	8/27/2010	% Rec	80 - 120	20	8260B
Toluene-d8 (surr)	92049.17	97 %R	97 %R	99 %R	8/27/2010	% Rec	70 - 130	20	8260B

Samples were extracted and analyzed within holding time limits.
Instrumentation was calibrated in accordance with the method requirements.
The method blanks were free of contamination at the reporting limits.
Sample surrogate recoveries met the above stated criteria.
The associated matrix spikes and/or Laboratory Control Samples met acceptance criteria.
There were no exceptions in the analyses, unless noted.
* Flagged analyte recoveries deviated from the QA/QC limits.

Analytes that exceed the acceptance limits high in the quality control samples but are not detected in the field samples do not impact the data. For analytes that show low recovery in the quality control samples and are not detected in the field samples, a low point calibration standard is analyzed to support the reporting limit.

1,2,3-Trichlorobenzene	< 0.5	9.3 (93 %R)	9.6 (96 %R) (3 RPD)	8/25/2010	ug/l	70 - 130	30	524.2
4-Bromofluorobenzene (surr)	91 %R	100 %R	98 %R	8/25/2010	% Rec	70 - 130		524.2
1,2-Dichlorobenzene-d4 (surr)	102 %R	110 %R	109 %R	8/25/2010	% Rec	70 - 130		524.2

Samples were extracted and analyzed within holding time limits.
Instrumentation was calibrated in accordance with the method requirements.
The method blanks were free of contamination at the reporting limits.
Sample surrogate recoveries met the above stated criteria.
The associated matrix spikes and/or Laboratory Control Samples met acceptance criteria.
There were no exceptions in the analyses, unless noted.
* Flagged analyte recoveries deviated from the QA/QC limits.

Analytes that exceed the acceptance limits high in the quality control samples but are not detected in the field samples do not impact the data. For analytes that show low recovery in the quality control samples and are not detected in the field samples, a low point calibration standard is analyzed to support the reporting limit.

Totals (QC Digestion Batch A)

Samples were analyzed within holding times unless noted on the sample results page.
Instrumentation was calibrated in accordance with the method requirements.
The method blanks were free of contamination at the reporting limits.
The associated matrix spikes and/or Laboratory Control Samples met the above stated criteria.
Exceptions to the above statements are flagged or noted above or on the QC Narrative page.
* Flagged analyte recoveries deviated from the QA/QC limits.

4VID0723
All linear to 300ug/L (including VA, acrolein and 2CEVE) except: 1500ug/L for TBA; 600ug/L for MTBE and 1,4-dioxane; 400ug/L for mp-x; 200ug/L for gases, t13DCPE and iso-pb; 50ug/L for VC
Low point for VC is 0.2, Low point for 11DCE, 11DCA, PCE, HCBD, BDCM is 0.5.
Low point for cis- and trans-13DCPE 2ppb. Low level analysis for these analytes will need to be run under a different curve.

All avg RF except for:
22DCPA, CCl4, BDCM, 2CEVE, t-13DCPE, bromoform, 12DB3CPA, and 25DBT (linear regression)
Second source met 20% Dev. for all compounds except: Freon-113 and 1,4-dioxane (OOC high) which will need to be rerun under a curve in control for these compounds. 14-dioxane did not meet 8260 criteria for average RF or linear regression and is for qualitative purposes only. IM and CT compound not included in this calibration.

CV DEV -

bromomethane	20.000	15.063	24.7
acrolein	20.000	9.418	52.9
2-Chloroethoxyethene	20.000	15.469	22.7
1,4-dioxane	40.000	25.072	37.3
mp-xylene	40.000	48.869	-22.2
iso-propylbenzene	20.000	24.435	-22.2

Compounds listed not in samples above detection limit. Low point analyzed to support RLs for analytes with low recoveries. There is no impact to data for those compounds showing high recoveries since these analytes were not found in samples >RL.
92049.07 mp-x hit rerun. CV meets all 8260 criteria and is in control for mpx. All other QC also in control for mpx

IS areas ok
12h tune ok
pH<2 for all samples
MB in control
LCS/LCSD in control

92049.07 has iso-propylbenzene present.

4VID0723
All linear to 300ug/L (including VA, acrolein and 2CEVE) except: 1500ug/L for TBA; 600ug/L for MTBE and 1,4-dioxane; 400ug/L for mp-x; 200ug/L for gases, t13DCPE and iso-pb; 50ug/L for VC
Low point for VC is 0.2, Low point for 11DCE, 11DCA, PCE, HCBD, BDCM is 0.5.
Low point for cis- and trans-13DCPE 2ppb. Low level analysis for these analytes will need to be run under a different curve.

All avg RF except for:
22DCPA, CCl4, BDCM, 2CEVE, t-13DCPE, bromoform, 12DB3CPA, and 25DBT (linear regression)
Second source met 20% Dev. for all compounds except: Freon-113 and 1,4-dioxane (OOC high) which will need to be rerun under a curve in control for these compounds. 14-dioxane did not meet 8260 criteria for average RF or linear regression and is for qualitative purposes only. IM and CT compound not included in this calibration.

CV DEV -
bromomethane 20.000 11.612 41.9
acrolein 20.000 10.723 46.4
2-Chloroethoxyethene 20.000 14.892 25.5
Compounds listed not in samples above detection limit. Low point analyzed to support RLs for analytes with low recoveries. There is no impact to data for those compounds showing high recoveries since these analytes were not found in samples >RL.

IS areas ok
12h tune ok
pH<2 for all samples
MB in control

5LID0712
Most analytes are linear 0.5 to 100ug/L (200ug/L for MtBE and m,p-xylene; 500ug/L for TBA).
Gases are linear to 100ug/L
Exceptions are: BF is linear to 20ug/L.
MtBE, Bromodichloromethane, cis-1,3-DCP, trans-1,3-DCP, m,p-xlene and hexachorobutadiene linear ranges are 0.20 - 100ug/L.

All compounds are avg. RF except BM, which is linear regression.

2nd source met 20% Dev. for all compounds except BM. Samples with BM present will need to be analyzed under a curve in control for these compound.

Kevin McKibben
Provan & Lorber (Co)
PO Box 389
Contoocook , NH 03229

Subject: Laboratory Report

Eastern Analytical, Inc. ID: 92079
Client Identification: Coakley Landfill | P0081
Date Received: 8/20/2010

Dear Mr. McKibben :

Enclosed please find the laboratory report for the above identified project. All analyses were performed in accordance with our QA/QC Program. Unless otherwise stated, holding times, preservation techniques, container types, and sample conditions adhered to EPA Protocol. Samples which were collected by Eastern Analytical, Inc. (EAI) were collected in accordance with approved EPA procedures. Eastern Analytical, Inc. certifies that the enclosed test results meet all requirements of NELAP and other applicable state certifications. Please refer to our website at www.eailabs.com for a copy of our NELAP certificate and accredited parameters.

The following standard abbreviations and conventions apply to all EAI reports:
Solid samples are reported on a dry weight basis, unless otherwise noted
< : "less than" followed by the reporting limit
> : "greater than" followed by the reporting limit
%R : % Recovery

Eastern Analytical Inc. maintains certification in the following states: Connecticut (PH-0492), Maine (NH005), Massachusetts (M-NH005), New Hampshire/NELAP (1012), Rhode Island (269) and Vermont (VT1012).

The following information is contained within this report: Sample Conditions summary, Analytical Results/Data, Quality Control data (if requested) and copies of the Chain of Custody. This report may not be reproduced except in full, without the the written approval of the laboratory.

If you have any questions regarding the results contained within, please feel free to directly contact me or the chemist(s) who performed the testing in question. Unless otherwise requested, we will dispose of the sample(s) 30 days from the sample receipt date.

We appreciate this opportunity to be of service and look forward to your continued patronage.

Sincerely,

Lorraine Olashaw, Lab Director | 9.7.10 Date | 349 # of pages (excluding cover letter)

SAMPLE CONDITIONS PAGE

Eastern Analytical, Inc. ID#: 92079

Client: **Provan & Lorber (Co)** Client Designation: **Coakley Landfill | P0081**

Temperature upon receipt (°C): 5 **Received on ice or cold packs (Yes/No): Y**

Lab ID	Sample ID	Date Received	Date Sampled	Sample Matrix	% Dry Weight	Exceptions/Comments (other than thermal preservation)

92079.08	Trip Blank 8260	8/20/10	8/4/10	aqueous		Adheres to Sample Acceptance Policy
92079.09	Trip Blank 14 Diox	8/20/10	7/14/10	aqueous		Adheres to Sample Acceptance Policy

Samples were properly preserved and the pH measured when applicable unless otherwise noted. Analysis of solids for pH, Flashpoint, Ignitibility, Paint Filter, Corrosivity, Conductivity and Specific Gravity are reported on an "as received" basis.

All results contained in this report relate only to the above listed samples.

Toluene-d8 (surr)	97 %R	102 %R	100 %R	8/26/2010	% Rec	70 - 130	20	8260B

Samples were extracted and analyzed within holding time limits.
Instrumentation was calibrated in accordance with the method requirements.
The method blanks were free of contamination at the reporting limits.
Sample surrogate recoveries met the above stated criteria.
The associated matrix spikes and/or Laboratory Control Samples met acceptance criteria.
There were no exceptions in the analyses, unless noted.
* Flagged analyte recoveries deviated from the QA/QC limits.

Analytes that exceed the acceptance limits high in the quality control samples but are not detected in the field samples do not impact the data. For analytes that show low recovery in the quality control samples and are not detected in the field samples, a low point calibration standard is analyzed to support the reporting limit.

QC REPORT

Eastern Analytical, Inc. ID#: 92079

Client: **Provan & Lorber (Co)** Client Designation: **Coakley Landfill | P0081**

Parameter Name	Blank	LCS	LCSD	Analysis Date	Units	Limits	RPD	Method
1,4-Dioxane	< 1	6 (121 %R)	6 (128 %R) (6 RPD)	8/30/2010	ug/l	70 - 130	20	8260B
4-Bromofluorobenzene (surr)	110 %R	111 %R	110 %R	8/30/2010	% Rec	70 - 130	50	8260B
Toluene-d8 (surr)	104 %R	106 %R	105 %R	8/30/2010	% Rec	70 - 130	50	8260B

Samples were extracted and analyzed within holding time limits.
Instrumentation was calibrated in accordance with the method requirements.
The method blanks were free of contamination at the reporting limits.
Sample surrogate recoveries met the above stated criteria.
The associated matrix spikes and/or Laboratory Control Samples met acceptance criteria.
There were no exceptions in the analyses, unless noted.
* Flagged analyte recoveries deviated from the QA/QC limits.

Totals

Samples were analyzed within holding times unless noted on the sample results page.
Instrumentation was calibrated in accordance with the method requirements.
The method blanks were free of contamination at the reporting limits.
The associated matrix spikes and/or Laboratory Control Samples met the above stated criteria.
Exceptions to the above statements are flagged or noted above or on the QC Narrative page.
* Flagged analyte recoveries deviated from the QA/QC limits.

Totals

Samples were analyzed within holding times unless noted on the sample results page.
Instrumentation was calibrated in accordance with the method requirements.
The method blanks were free of contamination at the reporting limits.
The associated matrix spikes and/or Laboratory Control Samples met the above stated criteria.
Exceptions to the above statements are flagged or noted above or on the QC Narrative page.
* Flagged analyte recoveries deviated from the QA/QC limits.

QC REPORT

Eastern Analytical, Inc. ID#: 92079

Client: **Provan & Lorber (Co)** Client Designation: **Coakley Landfill | P0081**

Parameter Name	Blank	LCS	LCSD	Units	Date of Analysis	Limits	RPD	Method

4VID0723
All linear to 300ug/L (including VA, acrolein and 2CEVE) except: 1500ug/L for TBA; 600ug/L for MTBE and 1,4-dioxane; 400ug/L for mp-x; 200ug/L for gases, t13DCPE and iso-pb; 50ug/L for VC
Low point for VC is 0.2, Low point for 11DCE, 11DCA, PCE, HCBD, BDCM is 0.5.
Low point for cis- and trans-13DCPE 2ppb. Low level analysis for these analytes will need to be run under a different curve.

All avg RF except for:
22DCPA, CCl4, BDCM, 2CEVE, t-13DCPE, bromoform, 12DB3CPA, and 25DBT (linear regression)
Second source met 20% Dev. for all compounds except: Freon-113 and 1,4-dioxane (OOC high) which will need to be rerun under a curve in control for these compounds. 14-dioxane did not meet 8260 criteria for average RF or linear regression and is for qualitative purposes only. IM and CT compound not included in this calibration.

CV DEV -
bromomethane 20.000 14.332 28.3
acrolein 20.000 11.064 44.7
acetone 20.000 14.133 29.3
2-butanone (MEK) 20.000 15.551 22.2
Compounds listed not in samples above detection limit. Low point analyzed to support RLs for analytes with low recoveries.

IS areas ok
12h tune ok
pH<2 for all samples
MB in control

MS/MSD in control with the following exceptions:
MSpk Dichlorodifluoromethane OOC Actual = 29 (143 %R) Target = 70-130
MSD Dichlorodifluoromethane OOC Actual = 27 (136 %R) Target = 70-130
DCDFM not present in samples reported as part of this batch.

LCS/LCSD in control with the following exception:
LCSD Acetone OOC Actual = 10 (68 %R) (7 RPD) Target = 70-130
Acetone not present in samples reported as part of this batch.

eastern analytical, inc.
professional laboratory services

Kevin McKibben
Provan & Lorber (Co)
PO Box 389
Contoocook , NH 03229

Subject: Laboratory Report

Eastern Analytical, Inc. ID: 94623
Client Identification: Coakley LF / P0081
Date Received: 11/10/2010

Dear Mr. McKibben :

Enclosed please find the laboratory report for the above identified project. All analyses were performed in accordance with our QA/QC Program. Unless otherwise stated, holding times, preservation techniques, container types, and sample conditions adhered to EPA Protocol. Samples which were collected by Eastern Analytical, Inc. (EAI) were collected in accordance with approved EPA procedures. Eastern Analytical, Inc. certifies that the enclosed test results meet all requirements of NELAP and other applicable state certifications. Please refer to our website at www.eailabs.com for a copy of our NELAP certificate and accredited parameters.

The following standard abbreviations and conventions apply to all EAI reports:
Solid samples are reported on a dry weight basis, unless otherwise noted
< : "less than" followed by the reporting limit
> : "greater than" followed by the reporting limit
%R : % Recovery

Eastern Analytical Inc. maintains certification in the following states: Connecticut (PH-0492), Maine (NH005), Massachusetts (M-NH005), New Hampshire/NELAP (1012), Rhode Island (269) and Vermont (VT1012).

The following information is contained within this report: Sample Conditions summary, Analytical Results/Data, Quality Control data (if requested) and copies of the Chain of Custody. This report may not be reproduced except in full, without the the written approval of the laboratory.

If you have any questions regarding the results contained within, please feel free to directly contact me or the chemist(s) who performed the testing in question. Unless otherwise requested, we will dispose of the sample(s) 30 days from the sample receipt date.

We appreciate this opportunity to be of service and look forward to your continued patronage.

Sincerely,

Lorraine Olashaw

Lorraine Olashaw, Lab Director

Samples were properly preserved and the pH measured when applicable unless otherwise noted. Analysis of solids for pH, Flashpoint, Ignitibility, Paint Filter, Corrosivity, Conductivity and Specific Gravity are reported on an "as received" basis.

All results contained in this report relate only to the above listed samples.

QC REPORT

Eastern Analytical, Inc. ID#: 94623

Client: **Provan & Lorber (Co)** Client Designation: **Coakley LF / P0081**

Parameter Name	Blank	LCS	LCSD	Units	Date of Analysis	Limits	RPD	Method
Arsenic	< 0.001	1.1 (107 %R)		mg/L	11/18/10	85 - 115	20	200.8
Manganese	< 0.005	1.1 (107 %R)		mg/L	11/18/10	85 - 115	20	200.8

Parameter Name	MS/MSD Parent ID	MS/MSD Parent	Matrix Spike	MSD	Units	Date of Analysis	Limits	RPD	Method
Arsenic	94623.15	0.032	0.99 (96 %R)	0.99 (96 %R) (0 RPD)	mg/L	11/18/10	70-130	20	200.8
Manganese	94623.15	0.84	1.7 (87 %R)	1.7 (87 %R) (0 RPD)	mg/L	11/18/10	70-130	20	200.8

Samples were analyzed within holding times unless noted on the sample results page.
Instrumentation was calibrated in accordance with the method requirements.
The method blanks were free of contamination at the reporting limits.
The associated matrix spikes and/or Laboratory Control Samples met the above stated criteria.
Exceptions to the above statements are flagged or noted above or on the QC Narrative page.
* Flagged analyte recoveries deviated from the QA/QC limits.

eastern analytical, inc.
professional laboratory services

Kevin McKibben
Provan & Lorber (Co)
PO Box 389
Contoocook , NH 03229

Subject: Laboratory Report

Eastern Analytical, Inc. ID: 96745
Client Identification: Coakley Landfill | P0081
Date Received: 2/8/2011

Dear Mr. McKibben :

Enclosed please find the laboratory report for the above identified project. All analyses were performed in accordance with our QA/QC Program. Unless otherwise stated, holding times, preservation techniques, container types, and sample conditions adhered to EPA Protocol. Samples which were collected by Eastern Analytical, Inc. (EAI) were collected in accordance with approved EPA procedures. Eastern Analytical, Inc. certifies that the enclosed test results meet all requirements of NELAP and other applicable state certifications. Please refer to our website at www.eailabs.com for a copy of our NELAP certificate and accredited parameters.

The following standard abbreviations and conventions apply to all EAI reports:
Solid samples are reported on a dry weight basis, unless otherwise noted
< : "less than" followed by the reporting limit
> : "greater than" followed by the reporting limit
%R : % Recovery

Eastern Analytical Inc. maintains certification in the following states: Connecticut (PH-0492), Maine (NH005), Massachusetts (M-NH005), New Hampshire/NELAP (1012), Rhode Island (269) and Vermont (VT1012).

The following information is contained within this report: Sample Conditions summary, Analytical Results/Data, Quality Control data (if requested) and copies of the Chain of Custody. This report may not be reproduced except in full, without the the written approval of the laboratory.

If you have any questions regarding the results contained within, please feel free to directly contact me or the chemist(s) who performed the testing in question. Unless otherwise requested, we will dispose of the sample(s) 30 days from the sample receipt date.

We appreciate this opportunity to be of service and look forward to your continued patronage.

Sincerely,

Lorraine Olashaw, Lab Director

Samples were properly preserved and the pH measured when applicable unless otherwise noted. Analysis of solids for pH, Flashpoint, Ignitibility, Paint Filter, Corrosivity, Conductivity and Specific Gravity are reported on an "as received" basis.

All results contained in this report relate only to the above listed samples.

Samples were extracted and analyzed within holding time limits.
Instrumentation was calibrated in accordance with the method requirements.
The method blanks were free of contamination at the reporting limits.
Sample surrogate recoveries met the above stated criteria.
The associated matrix spikes and/or Laboratory Control Samples met acceptance criteria.
There were no exceptions in the analyses, unless noted.
* Flagged analyte recoveries deviated from the QA/QC limits.

Analytes that exceed the acceptance limits high in the quality control samples but are not detected in the field samples do not impact the data. For analytes that show low recovery in the quality control samples and are not detected in the field samples, a low point calibration standard is analyzed to support the reporting limit.

Samples were analyzed within holding times unless noted on the sample results page.
Instrumentation was calibrated in accordance with the method requirements.
The method blanks were free of contamination at the reporting limits.
The associated matrix spikes and/or Laboratory Control Samples met the above stated criteria.
Exceptions to the above statements are flagged or noted above or on the QC Narrative page.
* Flagged analyte recoveries deviated from the QA/QC limits.

V(S) =	491.33	485.67	492.33	488.67
S =	32	-15	-19	4
Z =	1.399	-0.635	-0.811	0.136

n = Number of Samples

$V(S)$ = variance of $S = 1/18\ [n(n-1)(2n+5) - \sum p=1 \rightarrow g\ \ w_p(w_p-1)(2w_p+5)]$

where g = number of tied groups and w_p represents the number of data points in the p^{th} group

S = Mann-Kendall Statistic, number of increases versus number of decreases in data comparrision

$Z = (S-1)/[V(S)]^{1/2}$ if $S>0$, $Z=0$ if $S=0$, $Z= (S+1)/[V(S)]^{1/2}$ if $S<0$

Z is comparred to table of critical values to determine confidence in trend

Trend confidences defined at 99.5%, 99%, 97.5%, 95%, 90%, 85%, 80%, 75%, 70%, and no trend

SECTION 6

SITE:	Coakley Landfill (P0081)	
CLIENT:	Provan & Lorber Contoocook, New Hampshire	
LABORATORY:	Eastern Analytical, Inc. (Concord, New Hampshire) Work Order: 91943	
EVENT:	Groundwater Sampling–August 2010 (Part 1 of 3)	
SAMPLES(1):	9 groundwater samples, 1 field duplicate, 2 trip blanks	
TESTS/METHODS(1):	Volatile Organics (VOCs)–72 target analytes	8260B
	1,4 Dioxane	8260B SIM
	EDB & DBCP	8011/504
	Total Metals–23 analytes	200.8
	Dissolved Metals–Fe and Mn	200.8
	Ammonia-N	4500NH3D
	COD	H8000

(1) See Table 1 for a complete listing of samples and the tests performed on each.

QAA completed a Tier I validation of the above chemical analysis data in accordance with the USEPA's Region I *Data Validation Functional Guidelines* (Revised December 1996).

The validation was performed using a 'Level C' data package submitted by the laboratory in portable document format (pdf) and Complete SDG File (CSF) Inventory Sheets, which are included as Attachment A.

The validator checked the data package for completeness, assessed the results of Performance Evaluation (PE) samples analyzed with the field samples, and confirmed that all sample tests were performed within the method holding times. The results of the validation are summarized as follows:

Data Completeness: All sample results, QC results, and raw data including all information necessary to perform a Tier III validation as applicable for the analytical methodology is included in the laboratory data package except as follows:

- For the GC/MS tests (VOCs and 1,4-Dioxane), the raw mass spectra are not included in the package. The laboratory does not provide spectra for detects for GC/MS since the quantitation report provides the retention time, the target analyte identification, and the Q value, which gives a good indication of how the sample mass spectrum matches the reference spectrum; and thus, no further action was taken.

Additionally, the validator checked the sample information on the custody record (i.e., the sample ID, date received, date sampled, and sample matrix) against that reported by the laboratory and found no discrepancies.

PE Sample Results: A laboratory control sample (LCS), which is a clean sample matrix spiked with the analytes of interest, was analyzed with every analytical batch (maximum 20 samples of the same matrix). Additionally, a laboratory control sample duplicate (LCSD) was analyzed with every analytical batch for all tests except metals. Results are shown in Table 2.

Holding Time Check: All tests were performed within the holding times specified in the analytical methods.

QAA Validator: Taryn G. Scholz (Name) 3/23/11 (Date)

(1) See Table 1 for a complete listing of samples and the tests performed on each.

QAA completed a Tier I validation of the above chemical analysis data in accordance with the USEPA's Region I *Data Validation Functional Guidelines* (Revised December 1996).

The validation was performed using a 'Level C' data package submitted by the laboratory in portable document format (pdf) and Complete SDG File (CSF) Inventory Sheets, which are included as Attachment A.

The validator checked the data package for completeness, assessed the results of Performance Evaluation (PE) samples analyzed with the field samples, and confirmed that all sample tests were performed within the method holding times. The results of the validation are summarized as follows:

Data Completeness: All sample results, QC results, and raw data including all information necessary to perform a Tier III validation as applicable for the analytical methodology is included in the laboratory data package except as follows:

- For the GC/MS tests (VOCs and 1,4-Dioxane), the raw mass spectra are not included in the package. The laboratory does not provide spectra for detects for GC/MS since the quantitation report provides the retention time, the target analyte identification, and the Q value, which gives a good indication of how the sample mass spectrum matches the reference spectrum; and thus, no further action was taken.

Additionally, the validator checked the sample information on the custody record (i.e., the sample ID, date received, date sampled, and sample matrix) against that reported by the laboratory and found the following discrepancy:

- For sample GW-FPC-8B-0810, the laboratory reported a date sampled of 8/17/10, whereas the custody record shows 8/19/10.
- For sample DW-R-3-0810, the laboratory reported a date sampled of 8/19/10, whereas the custody record shows 8/17/10.

PE Sample Results: A laboratory control sample (LCS), which is a clean sample matrix spiked with the analytes of interest, was analyzed with every analytical batch (maximum 20 samples of the same matrix). Additionally, a laboratory control sample duplicate (LCSD) was analyzed with every analytical batch for all tests except metals. Results are shown in Table 2.

Holding Time Check: All tests were performed within the holding times specified in the analytical methods.

LCS (lab limits) – P
*Dissolved metals not requested for samples 6,7,13,14,15

Completed by: Taryn G. Scholz/ Quality Assurance Associates (QAA, LLC) (Name and Company) 3/14/11 (Date)

SITE:	Coakley Landfill (P0081)	
CLIENT:	Provan & Lorber Contoocook, New Hampshire	
LABORATORY:	Eastern Analytical, Inc. (Concord, New Hampshire) Work Order: 92079	
EVENT:	Groundwater Sampling–August 2010 (Part 3 of 3)	
SAMPLES(1):	5 groundwater samples, 1 field duplicate, 1 field blank, 2 trip blanks	
TESTS/METHODS(1):	Volatile Organics (VOCs)–72 target analytes	8260B
	1,4 Dioxane	8260B SIM
	EDB & DBCP	8011/504
	Total Metals–23 analytes	200.8
	Dissolved Metals–Fe and Mn	200.8

(1) See Table 1 for a complete listing of samples and the tests performed on each.

QAA completed a Tier I validation of the above chemical analysis data in accordance with the USEPA's Region I *Data Validation Functional Guidelines* (Revised December 1996).

The validation was performed using a 'Level C' data package submitted by the laboratory in portable document format (pdf) and Complete SDG File (CSF) Inventory Sheets, which are included as Attachment A.

The validator checked the data package for completeness, assessed the results of Performance Evaluation (PE) samples analyzed with the field samples, and confirmed that all sample tests were performed within the method holding times. The results of the validation are summarized as follows:

Data Completeness: All sample results, QC results, and raw data including all information necessary to perform a Tier III validation as applicable for the analytical methodology is included in the laboratory data package except as follows:

- For the GC/MS tests (VOCs and 1,4-Dioxane), the raw mass spectra are not included in the package. The laboratory does not provide spectra for detects for GC/MS since the quantitation report provides the retention time, the target analyte identification, and the Q value, which gives a good indication of how the sample mass spectrum matches the reference spectrum; and thus, no further action was taken.

Additionally, the validator checked the sample information on the custody record (i.e., the sample ID, date received, date sampled, and sample matrix) against that reported by the laboratory and found no discrepancies.

PE Sample Results: A laboratory control sample (LCS), which is a clean sample matrix spiked with the analytes of interest, was analyzed with every analytical batch (maximum 20 samples of the same matrix). Additionally, a laboratory control sample duplicate (LCSD) was analyzed with every analytical batch for all tests except metals. Results are shown in Table 2.

Holding Time Check: All tests were performed within the holding times specified in the analytical methods.

QAA Validator: Taryn G. Scholz (Name) 3/23/11 (Date)

Attachments: A Complete SDG File (CSF) Inventory Sheets

*Dissolved metals not requested for sample 1

Completed by: Taryn G. Scholz/ Quality Assurance Associates (QAA, LLC) 3/21/11
(Name and Company) (Date)

SITE:	Coakley Landfill (P0081)
CLIENT:	Provan & Lorber Contoocook, New Hampshire
LABORATORY:	Eastern Analytical, Inc. (Concord, New Hampshire) Work Order: 94623
EVENT:	Groundwater Sampling–November 2010
SAMPLES(1):	34 groundwater samples, 2 field duplicates, 2 field blanks, 1 equipment blank
TESTS/METHODS(1):	Total Metals–As and Mn 200.8

(1) See Table 1 for a complete listing of samples and the tests performed on each.

QAA completed a Tier I validation of the above chemical analysis data in accordance with the USEPA's Region I *Data Validation Functional Guidelines* (Revised December 1996).

The validation was performed using a 'Level C' data package submitted by the laboratory in portable document format (pdf) and Complete SDG File (CSF) Inventory Sheets, which are included as Attachment A.

The validator checked the data package for completeness, assessed the results of Performance Evaluation (PE) samples analyzed with the field samples, and confirmed that all sample tests were performed within the method holding times. The results of the validation are summarized as follows:

Data Completeness: All sample results, QC results, and raw data including all information necessary to perform a Tier III validation as applicable for the analytical methodology are included in the laboratory data package.

Additionally, the validator checked the sample information on the custody record (i.e., the sample ID, date received, date sampled, and sample matrix) against that reported by the laboratory and found no discrepancies.

PE Sample Results: A laboratory control sample (LCS), which is a clean sample matrix spiked with the analytes of interest, was analyzed with every analytical batch (maximum 20 samples of the same matrix). Results are shown in Table 2.

Holding Time Check: All tests were performed within the holding times specified in the analytical methods.

QAA Validator: Taryn G. Scholz (Name) 3/23/11 (Date)

SITE:	Coakley Landfill (P0081)	
CLIENT:	Provan & Lorber Contoocook, New Hampshire	
LABORATORY:	Eastern Analytical, Inc. (Concord, New Hampshire) Work Order: 96745	
EVENT:	Groundwater Sampling–February 2011	
SAMPLES(1):	3 groundwater samples, 2 field duplicates, 1 equipment blank, 1 field blank, 3 trip blanks	
TESTS/METHODS(1):	Volatile Organics (VOCs)–72 target analytes	8260B
	1,4 Dioxane	8260B SIM
	EDB & DBCP	8011/504
	Total Metals–23 analytes	200.8
	Dissolved Metals–Fe and Mn	200.8

(1) See Table 1 for a complete listing of samples and the tests performed on each.

QAA completed a Tier I validation of the above chemical analysis data in accordance with the USEPA's Region I *Data Validation Functional Guidelines* (Revised December 1996).

The validation was performed using a 'Level C' data package submitted by the laboratory in portable document format (pdf) and Complete SDG File (CSF) Inventory Sheets, which are included as Attachment A.

The validator checked the data package for completeness, assessed the results of Performance Evaluation (PE) samples analyzed with the field samples, and confirmed that all sample tests were performed within the method holding times. The results of the validation are summarized as follows:

Data Completeness: All sample results, QC results, and raw data including all information necessary to perform a Tier III validation as applicable for the analytical methodology is included in the laboratory data package except as follows:

- For the GC/MS tests (VOCs and 1,4-Dioxane), the raw mass spectra are not included in the package. The laboratory does not provide spectra for detects for GC/MS since the quantitation report provides the retention time, the target analyte identification, and the Q value, which gives a good indication of how the sample mass spectrum matches the reference spectrum; and thus, no further action was taken.
- For metals, the raw data (instrument printouts) are not included in the original package. The laboratory was contacted and the raw data was submitted in an addendum, which is included as Attachment B.

Additionally, the validator checked the sample information on the custody record (i.e., the sample ID, date received, date sampled, and sample matrix) against that reported by the laboratory and found no discrepancies.

PE Sample Results: A laboratory control sample (LCS), which is a clean sample matrix spiked with the analytes of interest, was analyzed with every analytical batch (maximum 20 samples of the same matrix). Additionally, a laboratory control sample duplicate (LCSD) was analyzed with every analytical batch for all tests except metals. Results are shown in Table 2.

Holding Time Check: All tests were performed within the holding times specified in the analytical methods.
