Findings of Fact | Site Plan Review City of Portsmouth Planning Board

Date: <u>January 18, 2024</u>

Property Address: 815 Lafayette Rd.

Application #: LU-23-149

Decision:

Approve Deny Approve with Conditions

Findings of Fact:

Per RSA 676:3, I: The local land use board shall issue a final written decision which either approves or disapproves an application for a local permit and make a copy of the decision available to the applicant. The decision shall include specific written findings of fact that support the decision. Failure of the board to make specific written findings of fact supporting a disapproval shall be grounds for automatic reversal and remand by the superior court upon appeal, in accordance with the time periods set forth in RSA 677:5 or RSA 677:15, unless the court determines that there are other factors warranting the disapproval. If the application is not approved, the board shall provide the applicant with written reasons for the disapproval. If the application is approved with conditions, the board shall include in the written decision a detailed description of the all conditions necessary to obtain final approval.

Site Plan Regulations Section 2.9 Evaluation Criteria - in order to grant site plan review approval, the TAC and the Planning Board shall find that the application satisfies evaluation criteria pursuant to NH State Law and listed herein. In making a finding, the TAC and the Planning Board shall consider all standards provided in Articles 3 through 11 of these regulations.

| | Site Plan Review Regulations | Finding | Supporting Information |
|---|--------------------------------------------------------------------------------------------|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | Section 2.9 Evaluation Criteria | (Meets Standard/Criteria) | |
| 1 | Compliance with all City Ordinances and Codes and these regulations. Applicable standards: | Meets Does Not Meet | Applicable standards: The application has been reviewed by the Technical Advisory Committee for conformance with the minimum requirements of the Site Plan Regulations. |
| | | | The application was recommended for approval on December 5, 2023 at the Technical Advisory Committee Meeting. |
| 2 | Provision for the safe development, change or expansion of use of the site. | Meets Does Not Meet | The application has been reviewed by the Technical Advisory Committee for conformance with the minimum requirements of the Site Plan Regulations. |
| | | | The application was recommended for approval on December 5, 2023 at the Technical Advisory Committee Meeting. |

Decision:

Approve Deny Approve with Conditions

Findings of Fact:

Per RSA 676:3, I: The local land use board shall issue a final written decision which either approves or disapproves an application for a local permit and make a copy of the decision available to the applicant. The decision shall include specific written findings of fact that support the decision. Failure of the board to make specific written findings of fact supporting a disapproval shall be grounds for automatic reversal and remand by the superior court upon appeal, in accordance with the time periods set forth in RSA 677:5 or RSA 677:15, unless the court determines that there are other factors warranting the disapproval. If the application is not approved, the board shall provide the applicant with written reasons for the disapproval. If the application is approved with conditions, the board shall include in the written decision a detailed description of all conditions necessary to obtain final approval.

Development Site Conditional Use Permit

10.5B43.10 For a development that contains multiple buildings in the Gateway District, the Planning Board may grant a conditional use permit, if all of the following criteria are met:

| | Development Site Conditional Use Permit 10.5B43.10 Findings | Finding (Meets Criteria/Requirement) | Supporting Information |
|---|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | The development project is consistent with the Portsmouth Master Plan. | Meets Does Not Meet | The application has been reviewed by the Technical Advisory Committee for conformance with the minimum criteria of the Development Site CUP. • TAC reviews the proposed development's consistency with Goals 1.2, 2.1, 2.3, & 5.3 of the City of Portsmouth Master Plan. The application was recommended for approval on December 5, 2023 at the Technical Advisory Committee Meeting. |
| 2 | The development project has been designed to allow uses that are appropriate for its context and consistent with City's planning goals and objectives for the area. | Meets Does Not Meet | The application has been reviewed by the Technical Advisory Committee for conformance with the minimum criteria of the Development Site CUP. • TAC reviews the proposed development's use relative to the City's planning goals and objectives for the area. The application was recommended for approval on December 5, 2023 at the |

| | Development Site Conditional | Finding | Supporting Information |

Findings of Fact | Wetland Conditional Use Permit City of Portsmouth Planning Board

Date: <u>January 18, 2024</u>

Property Address: 815 Lafayette Rd.

Application #: LU-23-149

Decision: ☐ Approve ☐ Deny ☐ Approve with Conditions

Findings of Fact:

Per RSA 676:3, I: The local land use board shall issue a final written decision which either approves or disapproves an application for a local permit and make a copy of the decision available to the applicant. The decision shall include specific written findings of fact that support the decision. Failure of the board to make specific written findings of fact supporting a disapproval shall be grounds for automatic reversal and remand by the superior court upon appeal, in accordance with the time periods set forth in RSA 677:5 or RSA 677:15, unless the court determines that there are other factors warranting the disapproval. If the application is not approved, the board shall provide the applicant with written reasons for the disapproval. If the application is approved with conditions, the board shall include in the written decision a detailed description of the all conditions necessary to obtain final approval.

In order to grant Wetland Conditional Use permit approval the Planning Board shall find the application satisfies criteria set forth in the Section 10.1017.50 (Criteria for Approval) of the Zoning Ordinance.

| | Zoning Ordinance Sector 10.1017.50 Criteria for Approval | Finding (Meets Criteria for Approval) | Supporting Information |
|---|----------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | 1. The land is reasonably suited to the use activity or alteration. | Meets Does Not Meet | The applicant is proposing to remove all existing impervious from the wetland buffer while introducing a riprap stormwater outlet and will be replacing with native landscaping (including buffer seed mixes), a woodchip walking path and multiple planting beds. |
| 2 | 2. There is no alternative location outside the wetland buffer that is feasible and reasonable for the proposed use, activity or alteration. | Meets Does Not Meet | The applicant is proposing to remove all existing impervious from the buffer, this will improve the health of the buffer overall. |

| | Zoning Ordinance Sector 10.1017.50 Criteria for Approval | Finding (Meets Criteria for Approval) | Supporting Information |
|---|------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3 | 3. There will be no adverse impact on the wetland functional values of the site or surrounding properties. | Meets Does Not Meet | The applicant is proposing to remove all existing impervious from the buffer and replace with native landscaping, planting beds, and buffer seed mix. Stormwater from the development outside of the buffer will be routed through a jellyfish filter treatment system and will exit into a constructed riprap outlet within the 50-100' buffer. |
| 4 | 4. Alteration of the natural vegetative state or managed woodland will occur only to the extent necessary to achieve construction goals. | Meets Does Not Meet | The applicant will be restoring the natural vegetated state and woodland area with new plantings and buffer seed mix. |
| 5 | 5. The proposal is the alternative with the least adverse impact to areas and environments under the jurisdiction of this section. | Meets Does Not Meet | The applicant is proposing the restoration of the buffer with the removal of impervious, improved stormwater treatment, additional plantings, and the elimination of lawn within the buffer. |
| 6 | 6. Any area within the vegetated buffer strip will be returned to a natural state to the extent feasible. | Meets Does Not Meet | The applicant is proposing to restore areas previously disturbed in the wetland buffer with buffer seed mix and plantings. The proposed community space within the 25' vegetated buffer is already protected and as such, would not qualify as community space. |

Mr. Peter Britz, Director of Planning & Sustainability City of Portsmouth Planning & Sustainability Department 1 Junkins Avenue Portsmouth NH, 03801

Re: Request for Site Review, Development Site Conditional Use & Wetland Conditional Use Permits
Proposed Multi-Family Development, 815 Lafayette Road, Portsmouth, NH

Dear Peter,

On behalf of Prospect North 815, LLC (owner/applicant) we are pleased to submit one (1) set of hard copies and one electronic file (.pdf) of the following information to support a request for a Site Review Permit, a Development Site Conditional Use Permit, and a Wetland Conditional Use Permit for the above referenced project:

- One (1) 22x34 & one (1) 11x17 copy of the Site Plan Set, last revised December 27, 2023;
- TAC & Con Com Conditions Response Letter, dated December 27, 2023;
- Drainage Analysis, last revised December 27, 2023;
- Long-Term Operation & Maintenance Plan, last revised December 27, 2023;
- Grade Plane Exhibit, dated October 23, 2023;
- Wetland Buffer Impervious Surface Exhibit, last revised November 22, 2023;
- Wetland Delineation Report, dated November 22, 2022;
- Invasive Species Removal Plan, dated October 23, 2023
- Community Space: Monitoring and Maintenance Plan, dated December 27, 2023;
- Community Space Exhibit, last revised December 27, 2023;
- Truck Turning Exhibit, last revised November 22, 2023;
- Traffic Impact Study, dated October 23, 2023;
- Unitil Will Service Letter, dated October 19, 21023;
- Green Energy Statement, dated October 23, 2023;
- Site Review Checklist, dated October 23, 2023;
- Application Fee Calculation Form;
- Owners Authorization, dated June 1, 2023

PROJECT SUMMARY

Existing Conditions

The proposed project is located at 815 Lafayette Road (US Route 1) which is identified as Map 245 Lot 3 on the City of Portsmouth Tax Maps. The site was previously home to the WHEB radio station which no longer operates at this location. The property is a 19.6-acre parcel of land that is located in the Gateway District (G1). The property is bound to the west by Route 1 and the abutting Lafayette Plaza shopping center property, to the north and east by the Winchester Place property and to the south by Sagamore Creek.

Proposed Redevelopment

The proposed project consists of the demolition of the existing building along Sagamore Creek and the construction of three 4-story, 24-unit multi-family buildings (72 total units) with ground floor parking. The project will include associated site improvements such as parking, pedestrian access, utilities, stormwater management, lighting, and landscaping. The site will be accessed via the existing driveway on Route 1.

The project met with the Zoning Board of Adjustments (ZBA) at its regularly scheduled meeting on September 26, 2023, at which the board granted two variances. The first is a variance from Section 10.5B33.20 (front build-out) to permit a front build-out of less than 50% of the total front yard width and the second is a variance from Section 10.5B33.30 (Façade Orientation) to permit an orientation that is not parallel with the front property line.

Open Space & Buffer Enhancement

The proposed project results in work within the 100-foot Tidal Buffer and therefore is subject to conditional use approval for demolition and construction activities. The 100-foot tidal buffer within the development area includes impervious parking surfaces, walkways, patio, concrete pads, and a building. The project will provide an overall improvement by removing all impervious cover within the 100-foot tidal buffer. The impervious surface impacts from the proposed project are shown in Table 1. In addition to the summary in Table 1 below, detailed calculations of the impervious surfaces within the buffer for the existing and proposed condition are depicted in the enclosed Wetland Buffer Impervious Surface Exhibit.

The projects landscape plan proposes to replace existing impervious areas with native grass mix and plant native trees in an effort to enhance the previously disturbed wetlands buffer.

Table 1. 815 Lafayette Road, Wetland Buffer Impervious Surfaces

| Buffer Segment | Existing Impervious (SF) | Final Impervious (SF) |
|------------------------|-----------------------------|--------------------------|
| 0-25 feet | 218 | 0 |
| 25-50 feet | 1,937 | 0 |
| 50-100 feet | 9,583 | 0 |
| Total | 11,738 | 0 |
| Net Impervious Surface | -11, | 738 |

Section 10.1017.24 of the Zoning Ordinance which indicates "Where feasible, the application shall include removal of impervious surfaces at least equal in area to the area of impervious surface impact. The intent of this provision is that the project will not result in a net loss of pervious surface within a jurisdictional wetland buffer." As shown in Table 1, the proposed project exceeds this requirement by providing an 11,738 SF reduction in impervious surface.

LAND USE PERMIT APPLICATIONS Site Plan Review Permit

The project will require a Site Plan Review Permit for the site improvements described above in the project summary. The project has previously met with the Planning Board for

Conceptual Consultation and the Technical Advisory Committee (TAC) and Conservation Commission (CC).

Development Site Conditional Use Permit

Under Section 10.5B41.10 Development Site Standards are "allowed by Conditional Use Permit approval from the Planning Board, a development site is any lot or group of contiguous lots owned or controlled by the same person or entity, assembled for the purpose of a single development and including more than one principal building or building type". As the proposed development includes more than one principal building and the proposed community space is on a separate lot with shared ownership, a CUP to allow the use of the Development Site Standards is being requested for this proposed project.

Conditional Use Permit Criteria

Based on the above described and enclosed materials, the following addresses how the Project warrants the granting of a Conditional Use Permit for a Development Site by satisfying the following four (4) criteria for approval in Section 10.5B43.10 of the Zoning Ordinance:

(1) The development project is consistent with the Portsmouth Master Plan.

The Project is consistent with several goals identified in the Master Plan.

- Goal 1.2 is to encourage walkable mixed-use development along existing commercial corridors. The proposed project has been designed to promote alternative modes of transportation such as walking and bicycling by incorporating both public and private bicycle storage spaces as well as maintaining a sidewalk connection to the existing sidewalks along Lafayette Road.
- Goal 2.1 is to ensure that new development complements and enhances its surroundings. The proposed residential buildings will further enhance the continued success of the adjacent commercial, retail, and restaurants located in the Lafayette Plaza and surrounding parcels.
- Goal 2.3 is to maintain and establish usable public access to and along the
 waterfront. The proposed project includes the restoration and
 enhancement of the 100' wetland buffer along Sagamore Creek and grants
 public access by way of the proposed community greenway trail along the
 waterfront.
- Goal 5.3 is to promote effective stewardship to enhance the city's natural resources. Action 5.3.2 under goal 5.3 says protect and care for existing trees, native vegetation, and woodlands and identify areas for new planting. The proposed work includes the removal of invasive species along the waterfront to promote the health of native vegetation and has opted to field delineate the proposed community trail to avoid the removal of existing well-established trees. Additionally, the entire portion of the wetland buffer that is currently impervious surfaces will be restored to a natural state using native trees, shrubs, and grasses.

(2) The development project has been designed to allow uses that are appropriate for its context and consistent with City's planning goals and objectives for the area.

The Project has been designed to be complementary to the abutting uses. Residential buildings are an allowed use within the zone and the addition of public

access is consistent with goals laid out in the City's Master Plan as described in criteria item 1.

(3) The project includes measures to mitigate or eliminate anticipated impacts on traffic safety and circulation, demand on municipal services, stormwater runoff, natural resources, and adjacent neighborhood character.

The Project will have a negligible impact on traffic due to the existing large traffic volumes on Lafayette Drive. A traffic study has been prepared and is being reviewed by NHDOT.

The development site has been designed to mitigate stormwater runoff with the use of detention and filtration stormwater treatment practices. The proposed project is a significant improvement over existing conditions as there is no stormwater treatment on site.

The Project as designed will be complementary to the abutting commercial uses.

(4) The project is consistent with the purpose and intent set forth in Section 10.5B11.

Section 10.5B11.10 states that "The purpose of Article 5B is to implement and support the goals of the City's Master Plan and Housing Policy to encourage walkable mixed-use development and continued economic vitality in the City's primary gateway areas, ensure that new development complements and enhances its surroundings, provide housing stock that is suited for changing demographics, and accommodate the housing needs of the City's current and future workforce."

As described in Criteria 1-3 the Project is consistent with the goals of the City's Master Plan including Goal 1.2 to encourage walkable mixed-use development along existing commercial corridors, Goal 2.1 to ensure that new development complements and enhances its surroundings, and Goal 2.3 to maintain and establish usable public access to and along the waterfront.

The Project will also provide additional and much needed housing stock to the City in an area outside of the downtown core, with easy access to abutting retail and commercial areas, and public transportation.

Wetland Conditional Use Permit

Jurisdictional wetland areas, including 2,782+/- linear feet of tidal wetlands and buffers along Sagamore Creek. A Conditional Use Permit for Wetland Buffer Impact will be required for the project for work within the 100 ft wetland buffer. Proposed work within the 100 ft wetland buffer is limited to the removal of existing impervious surfaces, existing leach field and septic system, and the restoration and enhancement of these areas with native grasses, shrubs, and trees. The project received a recommendation for approval from the Conservation Commission at their November 8, 2023, meeting.

Conditional Use Permit Criteria

Based on the above described and enclosed materials, the following addresses how the proposed project warrants the granting of a Wetland Conditional Use Permit by satisfying the following six (6) criteria for approval in Section 10.1017.50 of the Zoning Ordinance:

(1) The land is reasonably suited to the use, activity or alteration.

The land is currently a previously disturbed site that consists of the former WHEB Radio Station building. The proposed project design is an allowed use within the

Gateway Neighborhood Mixed Use District. Additionally, the proposed project site consists of a previously disturbed tidal buffer area which has historically been used as a commercial area. Work to be performed requiring a conditional use permit under this section includes the removal of existing impervious surfaces, removal of the existing leach field and septic system, and the restoration and enhancement of these areas with native grasses, shrubs, and trees. The proposed work results in the removal of all impervious surfaces from the buffer, the restoration and enhancement of these areas, and will provide public access in the upland area along Sagamore Creek.

(2) There is no alternative location outside the wetland buffer that is feasible and reasonable for the proposed use, activity or alteration.

The placement of the proposed buildings and parking areas was done in a manner to remove all impervious surfaces within the 25-, 50-, and 100-foot tidal buffers and proposes to replace existing impervious surfaces with native grass mix and plant native trees and shrubs.

(3) There will be no adverse impact on the wetland functional values of the site or surrounding properties;

There will be no adverse impact on the wetland functional values of the site as the existing condition is previously disturbed and consists of buildings, parking area, concrete pads, sidewalks, a leach field and septic system. The proposed project intends to remove all impervious surfaces from the wetland buffer area. The remainder of the buffer will be enhanced by the removal of invasive species and enhance the existing vegetation with native vegetation. The proposed project design site and landscape plans enhance the previously disturbed tidal buffer area given the existing condition and provide added value by creating public open space for recreation along the upland bank of Sagamore Creek.

(4) Alteration of the natural vegetative state or managed woodland will occur only to the extent necessary to achieve construction goals; and

The proposed project design proposes minimal alteration to the natural woodland to the greatest extent practical. This alteration includes the removal of invasive species and the construction of a wood chip greenway community trail, which is an allowed use under Section 10.1016.10(1) of the Zoning Ordinance. The construction of the wood chip trail is intended to minimize disturbance of the natural vegetative state by field alignment of the proposed trail around existing large native trees.

(5) The proposal is the alternative with the least adverse impact to areas and environments under the jurisdiction of this Section.

The proposed project design does not have an adverse impact on the site as it would enhance the buffer by improving water quality through stormwater treatment and providing public access to the upland bank of Sagamore Creek. Impervious surfaces within the 25-foot, 50-foot, and 100-foot tidal buffers have been removed by eliminating buildings, parking, sidewalks, patios, and concrete pads in addition to the removal of the existing leach field and septic system.

(6) Any area within the vegetated buffer strip will be returned to a natural state to the extent feasible.

The proposed project design within the vegetated buffer strip is limited to the removal of impervious areas and selective invasive species removal. The

landscape plan proposes replacing the existing disturbed areas within the 25-foot wetland buffer with a native grass mix, mown as required to avoid incursions of invasive species, and the addition of several native trees and shrubs on the water side of the wood chip path.

CONCLUSION

As shown in the enclosed information, the proposed plan will remove impervious surface within the buffer area, improve stormwater management, enhance the Sagamore Creek tidal wetland buffer and provide public benefit in the form of open space along the upland bank of Sagamore Creek.

To date the applicant has attended the following meetings with the local land-use boards related to the Site Plan:

- June 15, 2023 Planning Board Conceptual Consultation
- September 12, 2023 Technical Advisory Committee Work Session
- September 13, 2023 Conservation Commission Work Session
- September 26, 2023 Zoning Board of Adjustment
- November 7, 2023 Technical Advisory Committee Meeting
- November 8, 2023 Conservation Commission Meeting
- December 5, 2023 Technical Advisory Committee Meeting

The enclosed information has been prepared to address comments and feedback received to date from these land-use boards.

We respectfully request to be placed on the PB meeting agenda for January 18, 2024. If you have any questions or need any additional information, please contact me by phone at (603) 433-8818 or by email at NAHansen@tighebond.com.

Sincerely,

TIGHE & BOND, INC.

GENERAL NOTES:

- 1. THE LOCATIONS OF UNDERGROUND UTILITIES ARE APPROXIMATE AND THE LOCATIONS ARE NOT GUARANTEED BY THE OWNER OR THE ENGINEER. IT IS THE CONTRACTOR'S RESPONSIBILITY TO LOCATE ALL UTILITIES, ANTICIPATE CONFLICTS, REPAIR EXISTING UTILITIES AND RELOCATE EXISTING UTILITIES REQUIRED TO COMPLETE THE WORK.
- 2. COORDINATE ALL WORK WITHIN PUBLIC RIGHT OF WAYS WITH THE CITY OF PORTSMOUTH.
- 3. THE CONTRACTOR SHALL EMPLOY A NEW HAMPSHIRE LICENSED LAND SURVEYOR TO DETERMINE ALL LINES AND GRADES.
- 4. THE CONTRACTOR SHALL VERIFY LOCATION OF ALL EXISTING UTILITIES. CALL DIG SAFE AT LEAST 72 HOURS PRIOR TO THE COMMENCEMENT OF ANY DEMOLITION/CONSTRUCTION
- IT IS THE CONTRACTOR'S RESPONSIBILITY TO FAMILIARIZE THEMSELVES AND COMPLY WITH THE CONDITIONS OF ALL OF THE PERMIT APPROVALS.
- THE CONTRACTOR SHALL OBTAIN AND PAY FOR AND COMPLY WITH ADDITIONAL PERMITS, NOTICES AND FEES NECESSARY TO COMPLETE THE WORK AND ARRANGE FOR AND PAY FOR NECESSARY INSPECTIONS AND APPROVALS FROM THE AUTHORITIES HAVING JURISDICTION
- 7. THE CONTRACTOR SHALL PHASE DEMOLITION AND CONSTRUCTION AS REQUIRED TO PROVIDE CONTINUOUS SERVICE TO EXISTING BUSINESSES AND HOMES THROUGHOUT THE CONSTRUCTION PERIOD. EXISTING BUSINESS AND HOME SERVICES INCLUDE, BUT ARE NOT LIMITED TO ELECTRICAL, COMMUNICATION, FIRE PROTECTION, DOMESTIC WATER AND SEWER SERVICES. TEMPORARY SERVICES, IF REQUIRED, SHALL COMPLY WITH ALL FEDERAL STATE, LOCAL AND UTILITY COMPANY STANDARDS. CONTRACTOR SHALL PROVIDE DETAILED CONSTRUCTION SCHEDULE TO OWNER PRIOR TO ANY DEMOLITION/CONSTRUCTION ACTIVITIES AND SHALL COORDINATE TEMPORARY SERVICES TO ABUTTERS WITH THE UTILITY COMPANY AND AFFECTED ABUTTER.
- 8. ALL MATERIALS AND CONSTRUCTION SHALL CONFORM WITH APPLICABLE FEDERAL, STATE, AND LOCAL CODES & SPECIFICATIONS.
- ALL WORK SHALL CONFORM TO THE CITY OF PORTSMOUTH DEPARTMENT OF PUBLIC WORKS. STANDARD SPECIFICATIONS AND WITH THE STATE OF NEW HAMPSHIRE DEPARTMENT OF TRANSPORTATION, "STANDARD SPECIFICATIONS OF ROAD AND BRIDGE CONSTRUCTION",
- 10. CONTRACTOR TO SUBMIT AS-BUILT PLANS IN DIGITAL FORMAT (.DWG AND .PDF FILES) ON DISK TO THE OWNER AND ENGINEER UPON COMPLETION OF THE PROJECT. AS-BUILTS SHALL BE PREPARED AND CERTIFIED BY A NEW HAMPSHIRE LICENSED LAND SURVEYOR
- 11. CONTRACTOR SHALL THOROUGHLY CLEAN ALL CATCH BASINS AND DRAIN LINES, WITHIN THE LIMIT OF WORK, OF SEDIMENT IMMEDIATELY UPON COMPLETION OF CONSTRUCTION.
- 12. SEE EXISTING CONDITIONS PLAN FOR BENCH MARK INFORMATION.

DEMOLITION NOTES:

- 1. EROSION CONTROL MEASURES SHALL BE INSTALLED PRIOR TO THE START OF ANY CLEARING OR DEMOLITION ACTIVITIES.
- 2. ALL MATERIALS SCHEDULED TO BE REMOVED SHALL BECOME THE PROPERTY OF THE CONTRACTOR UNLESS OTHERWISE SPECIFIED. THE CONTRACTOR SHALL DISPOSE OF ALL MATERIALS OFF-SITE IN ACCORDANCE WITH ALL FEDERAL, STATE, AND LOCAL REGULATIONS, ORDINANCES AND CODES.
- COORDINATE REMOVAL, RELOCATION, DISPOSAL OR SALVAGE OF UTILITIES WITH THE OWNER AND APPROPRIATE UTILITY COMPANY.
- 4. ANY EXISTING WORK OR PROPERTY DAMAGED OR DISRUPTED BY CONSTRUCTION/ DEMOLITION ACTIVITIES SHALL BE REPLACED OR REPAIRED TO MATCH ORIGINAL EXISTING CONDITIONS BY THE CONTRACTOR AT NO ADDITIONAL COST TO THE OWNER.
- 5. SAW CUT AND REMOVE PAVEMENT ONE (1) FOOT OFF PROPOSED EDGE OF PAVEMENT OR EXISTING CURB LINE IN ALL AREAS WHERE PAVEMENT TO BE REMOVED ABUTS EXISTING PAVEMENT OR CONCRETE TO REMAIN.
- THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL DEMOLITION AND OFF-SITE DISPOSAL OF MATERIALS REQUIRED TO COMPLETE THE WORK, EXCEPT FOR WORK NOTED TO BE COMPLETED BY OTHERS.
- 7. UTILITIES SHALL BE TERMINATED AT THE MAIN LINE PER UTILITY COMPANY AND CITY OF PORTSMOUTH STANDARDS. THE CONTRACTOR SHALL REMOVE ALL ABANDONED UTILITIES LOCATED WITHIN THE LIMITS OF WORK UNLESS OTHERWISE NOTED.
- CONTRACTOR SHALL VERIFY ORIGIN OF ALL DRAINS AND UTILITIES PRIOR TO REMOVAL/TERMINATION TO DETERMINE IF DRAINS OR UTILITY IS ACTIVE, AND SERVICES ANY ON OR OFF-SITE STRUCTURE TO REMAIN. THE CONTRACTOR SHALL NOTIFY ENGINEER IMMEDIATELY OF ANY SUCH UTILITY FOUND AND SHALL MAINTAIN THESE UTILITIES UNTIL PERMANENT SOLUTION IS IN PLACE.
- PAVEMENT REMOVAL LIMITS ARE SHOWN FOR CONTRACTOR'S CONVENIENCE. ADDITIONAL PAVEMENT REMOVAL MAY BE REQUIRED DEPENDING ON THE CONTRACTOR'S OPERATION. CONTRACTOR TO VERIFY FULL LIMITS OF PAVEMENT REMOVAL PRIOR TO BID.
- 10. THE CONTRACTOR SHALL REMOVE AND DISPOSE OF ALL EXISTING STRUCTURES, CONCRETE PADS, UTILITIES AND PAVEMENT WITHIN THE WORK LIMITS SHOWN UNLESS SPECIFICALLY IDENTIFIED TO REMAIN. ITEMS TO BE REMOVED INCLUDE BUT ARE NOT LIMITED TO: CONCRETE, PAVEMENT, CURBS, LIGHTING, MANHOLES, CATCH BASINS, UNDER GROUND PIPING, POLES, STAIRS, SIGNS, FENCES, RAMPS, WALLS, BOLLARDS, BUILDING SLABS, FOUNDATION, TREES AND LANDSCAPING.
- 11. REMOVE TREES AND BRUSH AS REQUIRED FOR COMPLETION OF WORK. CONTRACTOR SHALL GRUB AND REMOVE ALL STUMPS WITHIN LIMITS OF WORK AND DISPOSE OF OFF SITE IN ACCORDANCE WITH FEDERAL, STATE, AND LOCAL LAWS AND REGULATIONS.
- 12. CONTRACTOR SHALL PROTECT ALL PROPERTY MONUMENTATION THROUGHOUT DEMOLITION AND CONSTRUCTION OPERATIONS. SHOULD ANY MONUMENTATION BE DISTURBED BY THE CONTRACTOR, THE CONTRACTOR SHALL EMPLOY A NEW HAMPSHIRE LICENSED SURVEYOR TO REPLACE DISTURBED MONUMENTS.
- 13. PROVIDE INLET PROTECTION BARRIERS AT ALL CATCH BASINS/CURB INLETS WITHIN CONSTRUCTION LIMITS AS WELL AS CATCH BASINS/CURB INLETS THAT RECEIVE RUNOFF FROM CONSTRUCTION ACTIVITIES. INLET PROTECTION BARRIERS SHALL BE MAINTAINED FOR THE DURATION OF THE PROJECT. INLET PROTECTION BARRIERS SHALL BE "HIGH FLOW SILT SACK" BY ACF ENVIRONMENTAL OR EQUAL. INSPECT BARRIERS WEEKLY AND AFTER EACH RAIN EVENT OF 0.25 INCHES OR GREATER. CONTRACTOR SHALL COMPLETE A MAINTENANCE INSPECTION REPORT AFTER EACH INSPECTION. SEDIMENT DEPOSITS SHALL BE REMOVED AFTER EACH STORM EVENT OR MORE OFTEN IF THE FABRIC BECOMES CLOGGED OR SEDIMENT HAS ACCUMULATED TO 1/3 THE DESIGN DEPTH OF THE BARRIER.
- 15. THE CONTRACTOR SHALL PAY ALL COSTS NECESSARY FOR TEMPORARY PARTITIONING, BARRICADING, FENCING, SECURITY AND SAFETY DEVICES REQUIRED FOR THE MAINTENANCE OF A CLEAN AND SAFE CONSTRUCTION SITE.
- 16. SAW CUT AND REMOVE PAVEMENT AND CONSTRUCT PAVEMENT TRENCH PATCH FOR ALL UTILITIES TO BE REMOVED AND PROPOSED UTILITIES LOCATED IN EXISTING PAVEMENT
- 17. THE CONTRACTOR SHALL REMOVE AND SALVAGE EXISTING GRANITE CURB FOR REUSE.

SITE NOTES:

- PAVEMENT MARKINGS SHALL BE INSTALLED AS SHOWN, INCLUDING PARKING SPACES, STOP BARS, ADA SYMBOLS, PAINTED ISLANDS, FIRE LANES, CROSS WALKS, ARROWS, LEGENDS AND CENTERLINES. ALL MARKINGS EXCEPT CENTERLINE AND MEDIAN ISLANDS TO BE CONSTRUCTED USING WHITE PAVEMENT MARKINGS. ALL THERMOPLASTIC PAVEMENT MARKINGS INCLUDING LEGENDS, ARROWS, CROSSWALKS AND STOP BARS SHALL MEET THE REQUIREMENTS OF AASHTO M249. ALL PAINTED PAVEMENT MARKINGS INCLUDING CENTERLINES, LANE LINES AND PAINTED MEDIANS SHALL MEET THE REQUIREMENTS OF AASHTO M248 TYPE "F".
- ALL PAVEMENT MARKINGS AND SIGNS TO CONFORM TO "MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES", "STANDARD ALPHABETS FOR HIGHWAY SIGNS AND PAVEMENT MARKINGS", AND THE AMERICANS WITH DISABILITIES ACT REQUIREMENTS, LATEST EDITIONS.
- 3. SEE DETAILS FOR PAVEMENT MARKINGS, ADA SYMBOLS, SIGNS AND SIGN POSTS.
- 4. CENTERLINES SHALL BE FOUR (4) INCH WIDE YELLOW LINES.
- 5. PAINTED ISLANDS SHALL BE FOUR (4) INCH WIDE DIAGONAL LINES AT 3'-0" O.C. BORDERED BY FOUR (4) INCH WIDE LINES.
- STOP BARS SHALL BE EIGHTEEN (18) INCHES WIDE, WHITE THERMOPLASTIC AND CONFORM TO CURRENT MUTCD STANDARDS.

- 7. CLEAN AND COAT VERTICAL FACE OF EXISTING PAVEMENT AT SAW CUT LINE WITH RS-1 EMULSION IMMEDIATELY PRIOR TO PLACING NEW BITUMINOUS CONCRETE
- 8. SEE ARCHITECTURAL/BUILDING DRAWINGS FOR ALL CONCRETE PADS & SIDEWALKS ADJACENT TO BUILDING.
- 10. CONTRACTOR TO PROVIDE BACKFILL AND COMPACTION AT CURB LINE AFTER CONCRETE FORMS FOR SIDEWALKS AND PADS HAVE BEEN STRIPPED. COORDINATE WITH BUILDING CONTRACTOR.
- 11. COORDINATE ALL WORK ADJACENT TO BUILDING WITH BUILDING CONTRACTOR.
- ALL DIMENSIONS ARE TO THE FACE OF CURB UNLESS OTHERWISE NOTED.
- 13. GATE SHALL BE EQUIPPED WITH KNOX PADLOCK. COORDINATE WITH THE CITY OF PORTSMOUTH FIRE DEPARTMENT.
- 14. THE PROPERTY MANAGER WILL BE RESPONSIBLE FOR TIMELY SNOW REMOVAL FROM ALL PRIVATE SIDEWALKS, DRIVEWAYS, AND PARKING AREAS. SNOW REMOVAL WILL BE HAULED OFF-SITE AND LEGALLY DISPOSED OF WHEN SNOW BANKS EXCEED 3 FEET IN HEIGHT.
- 15. CONTRACTOR SHALL COORDINATE WITH OWNER AND ELECTRICAL DRAWINGS FOR THE PROPOSED DUAL ELECTRIC VEHICLE CHARGING STATION TYPE, ELECTRICAL REQUIREMENTS AND CONDUIT LAYOUT PRIOR TO CONSTRUCTION.
- 16. SALT STORAGE AREAS SHALL BE LOCATED OUTSIDE THE 100' WETLAND BUFFER AND SHALL BE COVERED AT ALL TIMES TO ELIMINATE RUNOFF CONTAMINANTS.

GRADING AND DRAINAGE NOTES:

- COMPACTION REQUIREMENTS
- BELOW PAVED OR CONCRETE AREAS TRENCH BEDDING MATERIAL AND
- SAND BLANKET BACKFILL BELOW LOAM AND SEED AREAS
- * ALL PERCENTAGES OF COMPACTION SHALL BE OF THE MAXIMUM DRY DENSITY AT THE OPTIMUM MOISTURE CONTENT AS DETERMINED AND CONTROLLED IN ACCORDANCE WITH ASTM D-1557, METHOD C FIELD DENSITY TESTS SHALL BE MADE IN ACCORDANCE WITH ASTM D-1556 OR ASTM-2922.
- ALL STORM DRAINAGE PIPES SHALL BE HIGH DENSITY POLYETHYLENE (HANCOR HI-Q, ADS N-12 OR EQUAL) OR RCP CLASS IV, UNLESS OTHERWISE SPECIFIED.
- 3. ADJUST ALL MANHOLES, CATCH BASINS, CURB BOXES, ETC. WITHIN LIMITS OF WORK TO FINISH GRADE.
- 4. CONTRACTOR SHALL PROVIDE A FINISH PAVEMENT SURFACE AND LAWN AREAS FREE OF LOW SPOTS AND PONDING AREAS. CRITICAL AREAS INCLUDE BUILDING ENTRANCES, EXITS, RAMPS AND LOADING DOCK AREAS ADJACENT TO THE BUILDING.
- ALL DISTURBED AREAS NOT TO BE PAVED OR OTHERWISE TREATED SHALL RECEIVE 6" LOAM, SEED FERTILIZER AND MULCH.
- 6. ALL STORM DRAIN CONSTRUCTION SHALL BE IN ACCORDANCE WITH THE NHDOT STANDARD SPECIFICATIONS FOR HIGHWAYS AND BRIDGES, LATEST EDITION.
- ALL PROPOSED CATCH BASINS SHALL BE EQUIPPED WITH OIL/GAS SEPARATOR HOODS AND 4'

EROSION CONTROL NOTES:

1. SEE SHEET C-501 FOR GENERAL EROSION CONTROL NOTES AND DETAILS.

UTILITY NOTES:

- COORDINATE ALL UTILITY WORK WITH APPROPRIATE UTILITY COMPANY
 - NATURAL GAS UNITIL
 - WATER CITY OF PORTSMOUTH
 - SEWER CITY OF PORTSMOUTH
- ELECTRIC EVERSOURCE

OPERATIONAL.

- COMMUNICATIONS CONSOLIDATED COMM/FAIRPOINT/COMCAST
- ALL WATER MAIN INSTALLATIONS SHALL BE CLASS 52, CEMENT LINED DUCTILE IRON PIPE. ALL WATER MAIN INSTALLATIONS SHALL BE PRESSURE TESTED AND CHLORINATED AFTER
- CONSTRUCTION PRIOR TO ACTIVATING THE SYSTEM. CONTRACTOR SHALL COORDINATE CHLORINATION AND TESTING WITH THE CITY OF PORTSMOUTH WATER DEPARTMENT.
- 4. ALL SEWER PIPE SHALL BE PVC SDR 35 UNLESS OTHERWISE STATED.
- 5. CONNECTION TO EXISTING WATER MAIN SHALL BE CONSTRUCTED TO CITY OF PORTSMOUTH DPW STANDARDS.
- 6. EXISTING UTILITIES TO BE REMOVED SHALL BE CAPPED AT THE MAIN AND MEET THE DEPARTMENT OF PUBLIC WORKS STANDARDS FOR CAPPING OF WATER AND SEWER SERVICES.
- ALL ELECTRICAL MATERIAL WORKMANSHIP SHALL CONFORM TO THE NATIONAL ELECTRIC CODE, LATEST EDITION, AND ALL APPLICABLE STATE AND LOCAL CODES.
- 8. THE EXACT LOCATION OF NEW UTILITY SERVICES AND CONNECTIONS SHALL BE COORDINATED WITH THE BUILDING DRAWINGS AND THE APPLICABLE UTILITY COMPANIES. 9. ALL UNDERGROUND CONDUITS SHALL HAVE NYLON PULL ROPES TO FACILITATE PULLING
- CABLES. 10. THE CONTRACTOR SHALL PROVIDE AND INSTALL ALL MANHOLES, BOXES, FITTINGS, CONNECTORS, COVER PLATES, AND OTHER MISCELLANEOUS ITEMS NOT NECESSARILY DETAILED ON THESE DRAWINGS TO RENDER INSTALLATION OF UTILITIES COMPLETE AND
- 11. CONTRACTOR SHALL PROVIDE EXCAVATION, BEDDING, BACKFILL AND COMPACTION FOR NATURAL GAS SERVICES.
- 12. A 10-FOOT MINIMUM EDGE TO EDGE HORIZONTAL SEPARATION SHALL BE PROVIDED BETWEEN ALL WATER AND SANITARY SEWER LINES. AN 18-INCH MINIMUM OUTSIDE TO OUTSIDE VERTICAL SEPARATION SHALL BE PROVIDED AT ALL WATER/SANITARY SEWER CROSSINGS.
- 13. SAW CUT AND REMOVE PAVEMENT AND CONSTRUCT PAVEMENT TRENCH PATCH FOR ALL PROPOSED UTILITIES LOCATED IN EXISTING PAVEMENT AREAS TO REMAIN
- 14. HYDRANTS, GATE VALVES, FITTINGS, ETC. SHALL MEET THE REQUIREMENTS OF THE CITY OF PORTSMOUTH
- 15. COORDINATE TESTING OF SEWER CONSTRUCTION WITH THE CITY OF PORTSMOUTH.
- 16. ALL SEWER PIPE WITH LESS THAN 6' OF COVER IN PAVED AREAS OR LESS THAT 4' OF COVER IN UNPAVED AREAS SHALL BE INSULATED. 17. CONTRACTOR SHALL COORDINATE ALL ELECTRIC WORK INCLUDING BUT NOT LIMITED TO:
- CONDUIT CONSTRUCTION, MANHOLE CONSTRUCTION, UTILITY POLE CONSTRUCTION, OVERHEAD WIRE RELOCATION, AND TRANSFORMER CONSTRUCTION WITH POWER COMPANY.
- 18. SITE LIGHTING SPECIFICATIONS, CONDUIT LAYOUT AND CIRCUITRY FOR PROPOSED SITE LIGHTING AND SIGN ILLUMINATION SHALL BE PROVIDED BY THE PROJECT ELECTRICAL ENGINEER.
- 19. CONTRACTOR SHALL CONSTRUCT ALL UTILITIES AND DRAINS TO WITHIN 10' OF THE FOUNDATION WALLS AND CONNECT THESE TO SERVICE STUBS FROM THE BUILDING.
- 20. CONTRACTOR SHALL FIELD VERIFY EXISTING SEWER LINE LOCATION, INVERT AND DIAMETER PRIOR TO CONSTRUCTION AND SHALL SUBMIT FIELD INFORMATION TO ENGINEER FOR REVIEW. MODIFICATIONS TO THE NEW SEWER CONNECTION LOCATION AND ELEVATION MAY BE NECESSARY BASED ON THE OBSERVED EXISTING CONDITIONS.
- 21. EACH UTILITY CONNECTION WITHIN THE LAFAYETTE ROAD RIGHT OF WAY WILL REQUIRE A NHDOT RIGHT OF WAY ACTIVITIES PERMIT.

EXISTING CONDITIONS PLAN NOTES:

1. EXISTING CONDITIONS ARE BASED ON A FIELD SURVEY BY AMBIT ENGINEERING, INC. DATED 01/26/2023.

LANDSCAPE NOTES:

- 1. THE CONTRACTOR SHALL FURNISH AND PLANT ALL PLANTS IN QUANTITIES AS SHOWN ON THIS PLAN.
 NO SUBSTITUTIONS WILL BE PERMITTED UNLESS APPROVED BY OWNER. ALL PLANTS SHALL BE NURSERY
- 2. ALL PLANTS SHALL BE NURSERY GROWN AND PLANTS AND WORKMANSHIP SHALL CONFORM TO THE AMERICAN ASSOCIATION OF NURSERYMEN STANDARDS, INCLUDING BUT NOT LIMITED TO SIZE, HEALTH, SHAPE, ETC., AND SHALL BE SUBJECT TO THE APPROVAL OF THE LANDSCAPE ARCHITECT PRIOR TO ARRIVAL ON-SITE AND AFTER PLANTING.
- 3. PLANT STOCK SHALL BE GROWN WITHIN THE HARDINESS ZONES 4 THRU 7 ESTABLISHED BY THE PLANT HARDINESS ZONE MAP, MISCELLANEOUS PUBLICATIONS NO. 814, AGRICULTURAL RESEARCH SERVICE, UNITED STATES DEPARTMENT AGRICULTURE, LATEST REVISION.
- 4. PLANT MATERIAL SHALL BEAR THE SAME RELATIONSHIP TO FINISHED GRADE AS TO THE ORIGINAL PLANTING GRADE PRIOR TO DIGGING.
- 5. THE NUMBER OF EACH INDIVIDUAL PLANT TYPE AND SIZE PROVIDED IN THE PLANT LIST OR ON THE PLAN IS FOR THE CONTRACTOR'S CONVENIENCE ONLY. IF A DISCREPANCY EXISTS BETWEEN THE NUMBER OF PLANTS ON THE LABEL AND THE NUMBER OF SYMBOLS SHOWN ON THE DRAWINGS, THE GREATER NUMBER SHALL APPLY.
- 6. NO SUBSTITUTION OF PLANT MATERIALS WILL BE ALLOWED WITHOUT THE PRIOR WRITTEN APPROVAL OF THE OWNER'S REPRESENTATIVE.
- 7. THE CONTRACTOR SHALL LOCATE, VERIFY AND MARK ALL EXISTING AND NEWLY INSTALLED UNDERGROUND UTILITIES PRIOR TO ANY LAWN WORK OR PLANTING. ANY CONFLICTS WHICH MIGHT OCCUR BETWEEN PLANTING AND UTILITIES SHALL IMMEDIATELY BE REPORTED TO THE OWNER SO THAT
- ALTERNATE PLANTING LOCATIONS CAN BE DETERMINED.

 8. ALL DISTURBED AREAS NOT TO BE PAVED OR OTHERWISE TREATED, SHALL RECEIVE 6" OF LOAM AND
- SEED. NO FILL SHALL BE PLACED IN ANY WETLAND AREA.

 9. THREE INCHES (3") OF BARK MULCH IS TO BE USED AROUND THE TREE AND SHRUB PLANTING AS SPECIFIED IN THE DETAILS. WHERE BARK MULCH IS TO BE USED IN A CURBED ISLAND THE BARK MULCH SHALL MEET THE TOP INSIDE EDGE OF THE CURB. ALL OTHER AREAS SHALL RECEIVE 6" INCHES OF LOAM AND SEED.
- 10. LANDSCAPING SHALL BE LOCATED WITHIN 150 FT OF EXTERIOR HOSE ATTACHMENT OR SHALL BE PROVIDED WITH AN IRRIGATION SYSTEM.
- 11. SEE PLANTING DETAILS AND SPECIFICATIONS FOR ADDITIONAL REQUIREMENTS.
- 11. SEE PLANTING DETAILS AND SPECIFICATIONS FOR ADDITIONAL REQUIREMENTS.

 12. TREE STAKES SHALL REMAIN IN PLACE FOR NO LESS THAN 6 MONTHS AND NO MORE THAN 1 YEAR.

 13. PLANTING SHALL BE COMPLETED FROM APRIL 15TH THROUGH OCTOBER 1ST. NO PLANTING DURING
- JULY AND AUGUST UNLESS SPECIAL PROVISIONS ARE MADE FOR DROUGHT.

 14. PARKING AREA PLANTED ISLANDS TO HAVE MINIMUM OF 1'-0" TOPSOIL PLACED TO WITHIN 3 INCHES OF
- THE TOP OF CURB ELEVATION. REMOVE ALL CONSTRUCTION DEBRIS BEFORE PLACING TOPSOIL.

 15. TREES SHALL BE PRUNED IN ACCORDANCE WITH THE LATEST EDITION OF ANSI A300 'TREES, SHRUBS
- AND OTHER WOOD PLANT MAINTENANCE STANDARD PRACTICES.

 16. ALL PLANTS SHALL BE WATERED THOROUGHLY TWICE DURING THE FIRST 24 HOUR PERIOD AFTER PLANTING. ALL PLANTS SHALL BE WATERED WEEKLY, OR MORE OFTEN, IF NECESSARY DURING THE FIRST GROWING SEASON. LANDSCAPE CONTRACTOR SHALL COORDINATE WATERING SCHEDULE WITH
- OWNER DURING THE ONE (1) YEAR GUARANTEE PERIOD.

 17. EXISTING TREES AND SHRUBS SHOWN ON THE PLAN ARE TO REMAIN UNDISTURBED. ALL EXISTING TREES AND SHRUBS SHOWN TO REMAIN ARE TO BE PROTECTED WITH A 4-FOOT SNOW FENCE PLACED AT THE DRIP LINE OF THE BRANCHES OR AT 8 FEET MINIMUM FROM THE TREE TRUNK. ANY EXISTING TREE OR SHRUB SHOWN TO REMAIN, WHICH IS REMOVED DURING CONSTRUCTION, SHALL BE REPLACED
- BY A TREE OF COMPARABLE SIZE AND SPECIES TREE OR SHRUB.

 18. THE CONTRACTOR SHALL GUARANTEE ALL PLANTINGS TO BE IN GOOD HEALTHY, FLOURISHING AND ACCEPTABLE CONDITION FOR A PERIOD OF ONE (1) YEAR BEGINNING AT THE DATE OF ACCEPTANCE OF SUBSTANTIAL COMPLETION. ALL GRASSES, TREES AND SHRUBS THAT, IN THE OPINION OF THE LANDSCAPE ARCHITECT, SHOW LESS THAN 80% HEALTHY GROWTH AT THE END OF ONE YEAR PERIOD
- SHALL BE REPLACED BY THE CONTRACTOR.

 19. UPON EXPIRATION OF THE CONTRACTOR'S ONE YEAR GUARANTEE PERIOD, THE OWNER SHALL BE
- RESPONSIBLE FOR LANDSCAPE MAINTENANCE INCLUDING WATERING DURING PERIODS OF DROUGHT

 20. THE CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTING ALL PLANTING AND LAWNS AGAINST
 DAMAGE FROM ONGOING CONSTRUCTION. THIS PROTECTION SHALL BEGIN AT THE TIME THE PLANT IS
- INSTALLED AND CONTINUE UNTIL THE FORMAL ACCEPTANCE OF ALL THE PLANTINGS.

 21. PRE-PURCHASE PLANT MATERIAL AND ARRANGE FOR DELIVERY TO MEET PROJECT SCHEDULE AS REQUIRED IT MAY BE NECESSARY TO PRE-DIG CERTAIN SPECIES WELL IN ADVANCE OF ACTUAL PLANTING DATES.

COMMUNITY TRAIL NOTES:

- 1. THE COMMUNITY TRAIL DEPICTED ON THIS PLAN IS INTENDED FOR PERMITTING PURPOSES ONLY. FINAL TRAIL ALIGNMENT SHALL BE FIELD DELINEATED AND VERIFIED IN ACCORDANCE WITH THE FOLLOWING PEOLIDEMENTS.
- 1.1. THE TRAIL SHALL BE LAID OUT IN MANNER THAT PROTECTS EXISTING NATIVE WELL ESTABLISHED TREES GREATER THAN 3 INCHES IN DIAMETER.
- 1.2. TRAIL WIDTH SHALL HAVE A MINIMUM WIDTH OF APPROXIMATELY 5' AND A MAXIMUM WIDTH OF 6'.
- 1.3. IN NO INSTANCE SHALL SOIL BE CUT OR FILLED TO CONSTRUCT THE TRAIL IN EXISTING WOODLAND RESTORATION AREA.
- 1.4. TRAIL ALIGNMENT SHALL BE LIMITED TO THE UPLAND PORTION OF LAND BETWEEN THE 50 FT AND 100 FT WETLAND BUFFER.
- 1.5. TRAIL ALIGNMENT SHALL BE COORDINATED WITH THE INVASIVE SPECIES REMOVAL TO BE
- STRATEGICALLY PLACED WHERE EXISTING VEGETATION HAS BEEN DISTURBED.
- 2. THE TRAIL SHALL CONSIST OF 2 INCHES OF NATIVE WOOD CHIPS LAID DIRECTLY ON EXISTING FORESTED LAND OR PLACED LOAM.
- 3. CONTRACTOR SHALL PRIORITIZE THE USE OF WOOD CHIPS FROM THE NATIVE TREES ON SITE REQUIRED TO BE REMOVED FOR CONSTRUCTION ACTIVITIES.
- SHOULD ADDITIONAL WOOD CHIPS BE NEEDED, THEY SHALL BE NON INVASIVE NATIVE WOOD CHIPS.
 FINAL ALIGNMENT OF THE TRAIL IS SUBJECT TO REVIEW AND APPROVAL BY THE PLANNING AND SUSTAINABILITY DIRECTOR AND ANY SUBSEQUENT MODIFICATION WILL BE SUBJECT TO THE PB
- APPROVAL AS A SITE PLAN AMENDMENT.

 6. THE FINAL ALIGNMENT OF THE TRAIL SHALL BE LOCATED OUTSIDE THE NHDOT DRAINAGE EASEMENT AS DEPICTED ON THE PLANS.

WOODLAND RESTORATION NOTES

- 1. INVASIVE PLANT MATERIALS WILL BE REMOVED IN ACCORDANCE WITH THE INVASIVE SPECIES REMOVAL PLAN. INVASIVE REMOVAL WILL BE CONDUCTED USING MECHANICAL WHOLE PLANT REMOVAL STRATEGIES AND CHIPPED AND COMPOSTED AT AN APPROPRIATE FACILITY OR BURNED ON SITE ACCORDING TO LOCAL FIRE DEPARTMENT RULES AND REGULATIONS.
- 2. AN EXISTING TREE SURVEY WILL BE COMPLETED FOR THE PROJECT AS PART OF THE NHDES SHORELAND PERMITTING PROCESS AT WHICH TIME ALL EXISTING TREES ALONG THE SHORELAND WILL BE IDENTIFIED BY SPECIES AND SIZE.
- 3. EXISTING TREES THAT ARE DEEMED IN GOOD HEALTH WILL BE IDENTIFIED ON THE LANDSCAPE PLAN AS TO REMAIN.
- TREES DEEMED TO BE IN POOR HEALTH BY THE PROJECT ENVIRONMENTAL SCIENTIST OR INUNDATED BY INVASIVE SPECIES WILL BE REMOVED AND REPLACED IN KIND WITH A NATIVE TREE.
- INVASIVE SPECIES WILL BE REMOVED AND REPLACED IN KIND WITH A NATIVE TREE.

 5. ADDITIONAL LANDSCAPE BUFFER ENHANCEMENT MAY BE ADDED TO THE PROPOSED LANDSCAPE PLAN

TO FURTHER ENHANCE THE WETLAND BUFFER.

STABILIZATION MEASURES.

- 6. INVASIVE SPECIES REMOVAL WILL BE LIMITED TO THE UPLAND AREA OUTSIDE OF MEAN HIGH WATER LINE AND OR TO THE TOP OF THE STEEP BANK SLOPES TO MAINTAIN VEGETATION FOR SOIL
- 7. CONTRACTOR SHALL INSTALL AND MAINTAIN EROSION CONTROL MEASURE PRIOR TO THE REMOVAL OF INVASIVE SPECIES. CONTRACTOR SHALL KEEP EROSION CONTROL MEASURES IN PLACE FOR THE DURATION OF INVASIVE REMOVAL AND UNTIL THE PROPOSED PLANTINGS AND STABILIZATION MEASURES HAVE REACHED 80% GROWTH. EROSION CONTROL MEASURE SHALL BE REMOVED UPON THE FULL STABILIZATION OF THE RESTORATION AREA.

RESTORATION PLANTING NOTES

- INVASIVE PLANT MATERIALS WILL BE REMOVED USING MECHANICAL WHOLE PLANT REMOVAL STRATEGIES AND CHIPPED AND COMPOSTED AT AN APPROPRIATE FACILITY OR BURNED ON SITE ACCORDING TO LOCAL FIRE DEPARTMENT RULES AND REGULATIONS.
- DISTURBED SOILS WILL BE AUGMENTED AS NEEDED WITH A CUSTOM BLENDED SOIL OF ONE PART LOAM, ONE PART COMPOST AND ONE PART CLEAN SAND.
- 3. SEEDED AREAS ARE TO BE COVERED WITH SALT MARSH HAY TO RETAIN SOIL MOISTURE AND PROTECT AGAINST SEED PREDATION BY BIRDS AND SMALL ANIMALS.
- 4. NATIVE PLANT MATERIAL WILL BE LAID OUT AND INSTALLED BY AN ECOLOGICAL RESTORATION SPECIALIST OR PERSONS TRAINED IN HORTICULTURAL PRACTICES. EXACT PLANT LOCATIONS WILL BE
- DETERMINED IN THE FIELD BASED ON SITE SPECIFIC PLANTING CONDITIONS AND MICROTOPOGRAPHY.

 5. THE NEW PLANTINGS WILL BE WATERED FOR ONE FULL GROWING SEASON OR UNTIL SEED AND PLANT MATERIALS ARE ESTABLISHED.
- 6. MONTHLY INSPECTIONS WILL BE CONDUCTED DURING THE FIRST GROWING SEASON AND TREATMENT/REMOVAL OF INVASIVE SPECIES WILL BE IMPLEMENTED AS NEEDED DURING THE ESTABLISHMENT PERIOD.
- 7. CARE IS TO BE TAKEN IN REMOVING ANY NEW COLONIZING INVASIVE PLANT MATERIAL TO MINIMIZE DISTURBANCE TO ESTABLISHING NATIVE PLANT SPECIES.
- 8. PRACTICES REGARDING USE OF FERTILIZERS AND PESTICIDES WILL COMPLY WITH ORDINANCES 10.1018.24 AND 10.1018.25.

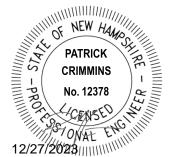

CITY OF PORTSMOUTH BUFFER VEGETATION NOTES

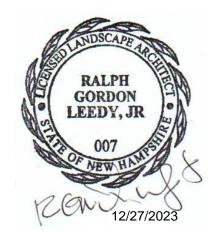

- 1. REMOVAL OR CUTTING OF VEGETATION
- 1.1. CHEMICAL CONTROL OF VEGETATION IS PROHIBITED IN ALL AREAS OF A WETLAND OR WETLAND
- 1.2. THE REMOVAL OR CUTTING OF VEGETATION IS PROHIBITED IN A WETLAND OR VEGETATED BUFFER STRIP, EXCEPT THAT NON-CHEMICAL CONTROL OF PLANTS DESIGNATED BY THE STATE OF NEW HAMPSHIRE AS "NEW HAMPSHIRE PROHIBITED INVASIVE SPECIES" IS PERMITTED.
- 1.3. THE REMOVAL OF MORE THAN 50% OF TREES GREATER THAN 6" DIAMETER AT BREAST HEIGHT (DBH) IS PROHIBITED IN THE LIMITED CUT AREA.
- 2.1. THE USE OF ANY FERTILIZER IS PROHIBITED IN A WETLAND, VEGETATED BUFFER STRIP OR LIMITED
- 2.2. THE USE OF FERTILIZERS OTHER THAN LOW PHOSPHATE AND SLOW RELEASE NITROGEN FERTILIZERS IS PROHIBITED IN ANY PART OF A WETLAND BUFFER.
- 3. PESTICIDES AND HERBICIDES
- 3.1. THE USE OF PESTICIDES OR HERBICIDES IS PROHIBITED IN A WETLAND OR WETLAND BUFFER, EXCEPT THAT APPLICATION OF PESTICIDES BY A PUBLIC AGENCY FOR PUBLIC HEALTH PURPOSES IS PERMITTED.

PROJECT LONGITUDE: 70°-46'-07.81"W

PROJECT APPLICANT: PROSPECT NORTH 815, LLC

PROJECT NAME: PROPOSED DEVELOPMENT PROJECT ADDRESS: 815 LAFAYETTE ROAD, PORTSMOUTH NH

PROJECT MAP / LOT: TAX MAP 245, LOT 3 PROJECT LATITUDE: 43°-03'-06.32"N

PROJECT DESCRIPTION

THE PROPOSED PROJECT CONSISTS OF REDEVELOPING THE EXISTING WHEB SITE TO A MULTI-FAMILY HOUSING SITE. THE SITE WILL CONSIST OF THREE PRIMARY BUILDING, ALL HAVING A SQUARE FOOTAGE 9,750 SF WITH 24 DWELLING UNITS IN EACH.

THE TOTAL AREA TO BE DISTURBED IS APPROXIMATELY 3.99 ACRES.

BASED ON THE NRCS WEB SOIL SURVEY FOR STRAFFORD COUNTY - NEW HAMPSHIRE, THE SOILS ON SITE CONSIST OF URBAN LAND-CANTON GRAVELLY FINE SANDY LOAM SOILS WHICH HAVE A FAST INFILTRATION RATE WHEN THOROUGHLY WET. THESE SOILS HAVE A HYDROLOGIC SOIL GROUP RATING OF D.

NAME OF RECEIVING WATERS

THE STORM WATER RUNOFF WILL ULTIMATELY DISCHARGE INTO THE SAGAMORE CREEK TO THE SOUTH OF THE SITE.

CONSTRUCTION SEQUENCE OF MAJOR ACTIVITIES: CUT AND CLEAR TREES.

- CONSTRUCT TEMPORARY AND PERMANENT SEDIMENT, EROSION AND DETENTION CONTROL FACILITIES. EROSION, SEDIMENT AND DETENTION MEASURES SHALL BE INSTALLED PRIOR TO ANY EARTH MOVING OPERATIONS THAT WILL INFLUENCE STORMWATER RUNOFF SUCH AS: NEW CONSTRUCTION
 - CONTROL OF DUST
 - NEARNESS OF CONSTRUCTION SITE TO RECEIVING WATERS
- CONSTRUCTION DURING LATE WINTER AND EARLY SPRING
- ALL PERMANENT DITCHES, SWALES, DETENTION, RETENTION AND SEDIMENTATION BASINS TO BE STABILIZED USING THE VEGETATIVE AND NON-STRUCTURAL BMPS PRIOR TO DIRECTING RUNOFF TO THEM
- CLEAR AND DISPOSE OF DEBRIS.
- CONSTRUCT TEMPORARY CULVERTS AND DIVERSION CHANNELS AS REQUIRED
- GRADE AND GRAVEL ROADWAYS AND PARKING AREAS ALL ROADS AND PARKING AREA SHALL BE STABILIZED WITHIN 72 HOURS OF ACHIEVING FINISHED GRADE.
- BEGIN PERMANENT AND TEMPORARY SEEDING AND MULCHING. ALL CUT AND FILL SLOPES
- SHALL BE SEEDED AND MULCHED WITHIN 72 HOURS OF ACHIEVING FINISHED GRADE. DAILY, OR AS REQUIRED, CONSTRUCT TEMPORARY BERMS, DRAINS, DITCHES, PERIMETER EROSION CONTROL MEASURES, SEDIMENT TRAPS, ETC., MULCH AND SEED AS REQUIRED.
- SEDIMENT TRAPS AND/OR BASINS SHALL BE USED AS NECESSARY TO CONTAIN RUNOFF UNTIL SOILS ARE STABILIZED
- 10. FINISH PAVING ALL ROADWAYS AND PARKING LOTS.
- 11. INSPECT AND MAINTAIN ALL EROSION AND SEDIMENT CONTROL MEASURES.
- 12. COMPLETE PERMANENT SEEDING AND LANDSCAPING. 13. REMOVE TRAPPED SEDIMENTS FROM COLLECTOR DEVICES AS APPROPRIATE AND THEN REMOVE TEMPORARY EROSION CONTROL MEASURES.

SPECIAL CONSTRUCTION NOTES:

THE CONSTRUCTION SEQUENCE MUST LIMIT THE DURATION AND AREA OF DISTURBANCE.

THE PROJECT IS TO BE MANAGED IN A MANNER THAT MEETS THE REQUIREMENTS AND INTENT OF RSA 430:53 AND CHAPTER AGR 3800 RELATIVE TO INVASIVE SPECIES.

EROSION CONTROL NOTES:

- ALL EROSION CONTROL MEASURES AND PRACTICES SHALL CONFORM TO THE "NEW HAMPSHIRE STORMWATER MANUAL VOLUME 3: EROSION AND SEDIMENT CONTROLS DURING CONSTRUCTION" PREPARED BY THE NHDES
- PRIOR TO ANY WORK OR SOIL DISTURBANCE, CONTRACTOR SHALL SUBMIT SHOP DRAWINGS FOR EROSION CONTROL MEASURES AS REQUIRED IN THE PROJECT MANUAL CONTRACTOR SHALL INSTALL TEMPORARY EROSION CONTROL BARRIERS, INCLUDING HAY
- BALES, SILT FENCES, MULCH BERMS, SILT SACKS AND SILT SOCKS AS SHOWN IN THESE DRAWINGS AS THE FIRST ORDER OF WORK. SILT SACK INLET PROTECTION SHALL BE INSTALLED IN ALL EXISTING AND PROPOSED CATCH
- BASIN INLETS WITHIN THE WORK LIMITS AND BE MAINTAINED FOR THE DURATION OF THE PERIMETER CONTROLS INCLUDING SILT FENCES, MULCH BERM, SILT SOCK, AND/OR HAY BALE
- BARRIERS SHALL BE MAINTAINED FOR THE DURATION OF THE PROJECT UNTIL NON-PAVED AREAS HAVE BEEN STABILIZED.
- THE CONTRACTOR SHALL REMOVE AND PROPERLY DISPOSE OF ALL TEMPORARY EROSION CONTROL DEVICES UPON COMPLETION OF CONSTRUCTION.
- ALL DISTURBED AREAS NOT OTHERWISE BEING TREATED SHALL RECEIVE 6" LOAM, SEED AND FERTILIZER.
- INSPECT ALL INLET PROTECTION AND PERIMETER CONTROLS WEEKLY AND AFTER EACH RAIN STORM OF 0.25 INCH OR GREATER. REPAIR/MODIFY PROTECTION AS NECESSARY TO MAXIMIZE EFFICIENCY OF FILTER. REPLACE ALL FILTERS WHEN SEDIMENT IS 1/3 THE FILTER
- CONSTRUCT EROSION CONTROL BLANKETS ON ALL SLOPES STEEPER THAN 3:1.

- AN AREA SHALL BE CONSIDERED STABLE WHEN ONE OF THE FOLLOWING HAS OCCURRED: A. BASE COURSE GRAVELS HAVE BEEN INSTALLED IN AREAS TO BE PAVED;
- B. A MINIMUM OF 85% VEGETATED GROWTH HAS BEEN ESTABLISHED;
- C. A MINIMUM OF 3" OF NON-EROSIVE MATERIAL SUCH AS STONE OR RIPRAP HAS BEEN
- INSTALLED; D. EROSION CONTROL BLANKETS HAVE BEEN PROPERLY INSTALLED.;
- E. IN AREAS TO BE PAVED, "STABLE" MEANS THAT BASE COURSE GRAVELS MEETING THE REQUIREMENTS OF NHDOT STANDARD FOR ROAD AND BRIDGE CONSTRUCTION, 2016, ITEM 304.2 HAVE BEEN INSTALLED.
- WINTER STABILIZATION PRACTICES: A. ALL PROPOSED VEGETATED AREAS THAT DO NOT EXHIBIT A MINIMUM OF 85 PERCENT VEGETATIVE GROWTH BY OCTOBER 15, OR WHICH ARE DISTURBED AFTER OCTOBER 15, SHALL BE STABILIZED BY SEEDING AND INSTALLING EROSION CONTROL BLANKETS ON SLOPES GREATER THAN 3:1, AND SEEDING AND PLACING 3 TO 4 TONS OF MULCH PER ACRE, SECURED WITH ANCHORED NETTING, ELSEWHERE. THE INSTALLATION OF EROSION CONTROL BLANKETS OR MULCH AND NETTING SHALL NOT OCCUR OVER ACCUMULATED
- ALL DITCHES OR SWALES WHICH DO NOT EXHIBIT A MINIMUM OF 85 PERCENT VEGETATIVE GROWTH BY OCTOBER 15, OR WHICH ARE DISTURBED AFTER OCTOBER 15, SHALL BE STABILIZED TEMPORARILY WITH STONE OR EROSION CONTROL BLANKETS APPROPRIATE FOR THE DESIGN FLOW CONDITIONS;

SNOW OR ON FROZEN GROUND AND SHALL BE COMPLETED IN ADVANCE OF THAW OR

- C. AFTER OCTOBER 15, INCOMPLETE ROAD OR PARKING SURFACES, WHERE WORK HAS STOPPED FOR THE WINTER SEASON, SHALL BE PROTECTED WITH A MINIMUM OF 3 INCHES OF CRUSHED GRAVEL PER NHDOT ITEM 304.3, OR IF CONSTRUCTION IS TO CONTINUE THROUGH THE WINTER SEASON BE CLEARED OF ANY ACCUMULATED SNOW AFTER EACH STORM EVENT;
- STABILIZATION SHALL BE INITIATED ON ALL LOAM STOCKPILES, AND DISTURBED AREAS, WHERE CONSTRUCTION ACTIVITY SHALL NOT OCCUR FOR MORE THAN TWENTY-ONE (21) CALENDAR DAYS BY THE FOURTEENTH (14TH) DAY AFTER CONSTRUCTION ACTIVITY HAS PERMANENTLY OR TEMPORARILY CEASED IN THAT AREA. STABILIZATION MEASURES TO BE **USED INCLUDE:**
- A. TEMPORARY SEEDING;
- B. MULCHING.
- ALL AREAS SHALL BE STABILIZED WITHIN 45 DAYS OF INITIAL DISTURBANCE.
- WHEN CONSTRUCTION ACTIVITY PERMANENTLY OR TEMPORARILY CEASES WITHIN 100 FEET OF NEARBY SURFACE WATERS OR DELINEATED WETLANDS, THE AREA SHALL BE STABILIZED WITHIN SEVEN (7) DAYS OR PRIOR TO A RAIN EVENT. ONCE CONSTRUCTION ACTIVITY CEASES PERMANENTLY IN AN THESE AREAS, SILT FENCES, MULCH BERMS, HAY BALE BARRIERS AND

ANY EARTH/DIKES SHALL BE REMOVED ONCE PERMANENT MEASURES ARE ESTABLISHED. 6. DURING CONSTRUCTION, RUNOFF WILL BE DIVERTED AROUND THE SITE WITH EARTH DIKES, PIPING OR STABILIZED CHANNELS WHERE POSSIBLE. SHEET RUNOFF FROM THE SITE WILL BE FILTERED THROUGH SILT FENCES, MULCH BERMS, HAY BALE BARRIERS, OR SILT SOCKS. ALL STORM DRAIN BASIN INLETS SHALL BE PROVIDED WITH FLARED END SECTIONS AND TRASH

I. THE CONTRACTOR SHALL BE RESPONSIBLE TO CONTROL DUST THROUGHOUT THE CONSTRUCTION PERIOD.

RACKS. THE SITE SHALL BE STABILIZED FOR THE WINTER BY NOVEMBER 15.

- 2. DUST CONTROL METHODS SHALL INCLUDE, BUT BE NOT LIMITED TO SPRINKLING WATER ON EXPOSED AREAS, COVERING LOADED DUMP TRUCKS LEAVING THE SITE, AND TEMPORARY
- 3. DUST CONTROL MEASURES SHALL BE UTILIZED SO AS TO PREVENT THE MIGRATION OF DUST FROM THE SITE TO ABUTTING AREAS.

- 1. LOCATE STOCKPILES A MINIMUM OF 50 FEET AWAY FROM CATCH BASINS, SWALES, AND
- 2. ALL STOCKPILES SHOULD BE SURROUNDED WITH TEMPORARY EROSION CONTROL MEASURES
- PRIOR TO THE ONSET OF PRECIPITATION. 3. PERIMETER BARRIERS SHOULD BE MAINTAINED AT ALL TIMES, AND ADJUSTED AS NEEDED TO ACCOMMODATE THE DELIVERY AND REMOVAL OF MATERIALS FROM THE STOCKPILE. THE

INTEGRITY OF THE BARRIER SHOULD BE INSPECTED AT THE END OF EACH WORKING DAY

4. PROTECT ALL STOCKPILES FROM STORMWATER RUN-OFF USING TEMPORARY EROSION CONTROL MEASURES SUCH AS BERMS, SILT SOCK, OR OTHER APPROVED PRACTICE TO PREVENT MIGRATION OF MATERIAL BEYOND THE IMMEDIATE CONFINES OF THE STOCKPILES

OFF SITE VEHICLE TRACKING:

1. THE CONTRACTOR SHALL CONSTRUCT STABILIZED CONSTRUCTION ENTRANCE(S) PRIOR TO ANY EXCAVATION ACTIVITIES.

- 1. TEMPORARY GRASS COVER:
- A. SEEDBED PREPARATION: a. APPLY FERTILIZER AT THE RATE OF 600 POUNDS PER ACRE OF 10-10-10. APPLY LIMESTONE (EQUIVALENT TO 50 PERCENT CALCIUM PLUS MAGNESIUM OXIDE) AT A RATE OF THREE (3) TONS PER ACRE;
- B. SEEDING:
- a. UTILIZE ANNUAL RYE GRASS AT A RATE OF 40 LBS/ACRE;
- b. WHERE THE SOIL HAS BEEN COMPACTED BY CONSTRUCTION OPERATIONS, LOOSEN SOIL TO A DEPTH OF TWO (2) INCHES BEFORE APPLYING FERTILIZER, LIME AND SEED;
- c. APPLY SEED UNIFORMLY BY HAND, CYCLONE SEEDER, OR HYDROSEEDER (SLURRY INCLUDING SEED AND FERTILIZER). HYDROSEEDINGS, WHICH INCLUDE MULCH, MAY BE LEFT ON SOIL SURFACE. SEEDING RATES MUST BE INCREASED 10% WHEN
- HYDROSEEDING; C. MAINTENANCE:
- a. TEMPORARY SEEDING SHALL BE PERIODICALLY INSPECTED. AT A MINIMUM, 95% OF THE SOIL SURFACE SHOULD BE COVERED BY VEGETATION. IF ANY EVIDENCE OF EROSION OR SEDIMENTATION IS APPARENT, REPAIRS SHALL BE MADE AND OTHER TEMPORARY MEASURES USED IN THE INTERIM (MULCH, FILTER BARRIERS, CHECK DAMS,

ETC.).

- 2. VEGETATIVE PRACTICE: A. FOR PERMANENT MEASURES AND PLANTINGS:
 - a. LIMESTONE SHALL BE THOROUGHLY INCORPORATED INTO THE LOAM LAYER AT A RATE OF THREE (3) TONS PER ACRE IN ORDER TO PROVIDE A PH VALUE OF 5.5 TO 7.6;
 - b. FERTILIZER SHALL BE SPREAD ON THE TOP LAYER OF LOAM AND WORKED INTO THE SURFACE. FERTILIZER APPLICATION RATE SHALL BE 800 POUNDS PER ACRE OF 10-20-20
 - c. SOIL CONDITIONERS AND FERTILIZER SHALL BE APPLIED AT THE RECOMMENDED RATES AND SHALL BE THOROUGHLY WORKED INTO THE LOAM. LOAM SHALL BE RAKED UNTIL THE SURFACE IS FINELY PULVERIZED, SMOOTH AND EVEN, AND THEN COMPACTED TO AN EVEN SURFACE CONFORMING TO THE REQUIRED LINES AND GRADES WITH APPROVED ROLLERS WEIGHING BETWEEN 4-1/2 POUNDS AND 5-1/2 POUNDS PER INCH OF WIDTH
 - d. SEED SHALL BE SOWN AT THE RATE SHOWN BELOW. SOWING SHALL BE DONE ON A CALM, DRY DAY, PREFERABLY BY MACHINE, BUT IF BY HAND, ONLY BY EXPERIENCED WORKMEN. IMMEDIATELY BEFORE SEEDING, THE SOIL SHALL BE LIGHTLY RAKED. ONE HALF THE SEED SHALL BE SOWN IN ONE DIRECTION AND THE OTHER HALF AT RIGHT ANGLES TO THE ORIGINAL DIRECTION. IT SHALL BE LIGHTLY RAKED INTO THE SOIL TO A DEPTH NOT OVER 1/4 INCH AND ROLLED WITH A HAND ROLLER WEIGHING NOT OVER 100 POUNDS PER LINEAR FOOT OF WIDTH;
 - e. HAY MULCH SHALL BE APPLIED IMMEDIATELY AFTER SEEDING AS INDICATED ABOVE; f. THE SURFACE SHALL BE WATERED AND KEPT MOIST WITH A FINE SPRAY AS REQUIRED, WITHOUT WASHING AWAY THE SOIL, UNTIL THE GRASS IS WELL ESTABLISHED. ANY AREAS WHICH ARE NOT SATISFACTORILY COVERED WITH GRASS SHALL BE RESEEDED,
 - g. THE CONTRACTOR SHALL PROTECT AND MAINTAIN THE SEEDED AREAS UNTIL ACCEPTED; h. A GRASS SEED MIXTURE CONTAINING THE FOLLOWING SEED REOUIREMENTS SHALL BE APPLIED AT THE INDICATED RATE:

SEED MIX APPLICATION RATE CREEPING RED FESCUE 20 LBS/ACRE TALL FESCUE 20 LBS/ACRE

AND ALL NOXIOUS WEEDS REMOVED;

REDTOP 2 LBS/ACRE IN NO CASE SHALL THE WEED CONTENT EXCEED ONE (1) PERCENT BY WEIGHT. ALL SEED SHALL COMPLY WITH STATE AND FEDERAL SEED LAWS. SEEDING SHALL BE DONE NO LATER THAN SEPTEMBER 15. IN NO CASE SHALL SEEDING TAKE PLACE OVER SNOW.

- 3. DORMANT SEEDING (SEPTEMBER 15 TO FIRST SNOWFALL)
- A. FOLLOW PERMANENT MEASURES SLOPE, LIME, FERTILIZER AND GRADING REQUIREMENTS. APPLY SEED MIXTURE AT TWICE THE INDICATED RATE. APPLY MULCH AS INDICATED FOR PERMANENT MEASURES.

- THE FOLLOWING ARE THE ONLY NON-STORMWATER DISCHARGES ALLOWED. ALL OTHER NON-STORMWATER DISCHARGES ARE PROHIBITED ON SITE:
- A. THE CONCRETE DELIVERY TRUCKS SHALL, WHENEVER POSSIBLE, USE WASHOUT FACILITIES AT THEIR OWN PLANT OR DISPATCH FACILITY;
- B. IF IT IS NECESSARY, SITE CONTRACTOR SHALL DESIGNATE SPECIFIC WASHOUT AREAS AND DESIGN FACILITIES TO HANDLE ANTICIPATED WASHOUT WATER; C. CONTRACTOR SHALL LOCATE WASHOUT AREAS AT LEAST 150 FEET AWAY FROM STORM
- DRAINS, SWALES AND SURFACE WATERS OR DELINEATED WETLANDS; D. INSPECT WASHOUT FACILITIES DAILY TO DETECT LEAKS OR TEARS AND TO IDENTIFY WHEN MATERIALS NEED TO BE REMOVED.

ALLOWABLE NON-STORMWATER DISCHARGES:

- FIRE-FIGHTING ACTIVITIES:
- FIRE HYDRANT FLUSHING;
- 3. WATERS USED TO WASH VEHICLES WHERE DETERGENTS ARE NOT USED;
- WATER USED TO CONTROL DUST; 5. POTABLE WATER INCLUDING UNCONTAMINATED WATER LINE FLUSHING;
- 6. ROUTINE EXTERNAL BUILDING WASH DOWN WHERE DETERGENTS ARE NOT USED;
- 7. PAVEMENT WASH WATERS WHERE DETERGENTS ARE NOT USED;
- 8. UNCONTAMINATED AIR CONDITIONING/COMPRESSOR CONDENSATION; 9. UNCONTAMINATED GROUND WATER OR SPRING WATER;
- 10. FOUNDATION OR FOOTING DRAINS WHICH ARE UNCONTAMINATED; 11. LANDSCAPE IRRIGATION.

WASTE DISPOSAL:

- A. ALL WASTE MATERIALS SHALL BE COLLECTED AND STORED IN SECURELY LIDDED RECEPTACLES. ALL TRASH AND CONSTRUCTION DEBRIS FROM THE SITE SHALL BE DEPOSITED IN A DUMPSTER;
- B. NO CONSTRUCTION WASTE MATERIALS SHALL BE BURIED ON SITE;
- C. ALL PERSONNEL SHALL BE INSTRUCTED REGARDING THE CORRECT PROCEDURE FOR WASTE DISPOSAL BY THE SUPERINTENDENT.
- 2. HAZARDOUS WASTE:

- A. ALL HAZARDOUS WASTE MATERIALS SHALL BE DISPOSED OF IN THE MANNER SPECIFIED BY LOCAL OR STATE REGULATION OR BY THE MANUFACTURER;
- B. SITE PERSONNEL SHALL BE INSTRUCTED IN THESE PRACTICES BY THE SUPERINTENDENT.
- 3. SANITARY WASTE: A. ALL SANITARY WASTE SHALL BE COLLECTED FROM THE PORTABLE UNITS A MINIMUM OF ONCE PER WEEK BY A LICENSED SANITARY WASTE MANAGEMENT CONTRACTOR.

- CONTRACTOR SHALL BE FAMILIAR WITH SPILL PREVENTION MEASURES REQUIRED BY LOCAL, STATE AND FEDERAL AGENCIES. AT A MINIMUM, CONTRACTOR SHALL FOLLOW THE BEST MANAGEMENT SPILL PREVENTION PRACTICES OUTLINED BELOW.
- 2. THE FOLLOWING ARE THE MATERIAL MANAGEMENT PRACTICES THAT SHALL BE USED TO REDUCE THE RISK OF SPILLS OR OTHER ACCIDENTAL EXPOSURE OF MATERIALS AND
- SUBSTANCES DURING CONSTRUCTION TO STORMWATER RUNOFF: A. GOOD HOUSEKEEPING - THE FOLLOWING GOOD HOUSEKEEPING PRACTICE SHALL BE FOLLOWED ON SITE DURING CONSTRUCTION:
- a. ONLY SUFFICIENT AMOUNTS OF PRODUCTS TO DO THE JOB SHALL BE STORED ON SITE; b. ALL MATERIALS STORED ON SITE SHALL BE STORED IN A NEAT, ORDERLY MANNER IN THEIR PROPER (ORIGINAL IF POSSIBLE) CONTAINERS AND, IF POSSIBLE, UNDER A ROOF
- OR OTHER ENCLOSURE; c. MANUFACTURER'S RECOMMENDATIONS FOR PROPER USE AND DISPOSAL SHALL BE
- d. THE SITE SUPERINTENDENT SHALL INSPECT DAILY TO ENSURE PROPER USE AND DISPOSAL OF MATERIALS;
- e. SUBSTANCES SHALL NOT BE MIXED WITH ONE ANOTHER UNLESS RECOMMENDED BY THE
- f. WHENEVER POSSIBLE ALL OF A PRODUCT SHALL BE USED UP BEFORE DISPOSING OF THE
- B. HAZARDOUS PRODUCTS THE FOLLOWING PRACTICES SHALL BE USED TO REDUCE THE RISKS ASSOCIATED WITH HAZARDOUS MATERIALS:
- PRODUCTS SHALL BE KEPT IN THEIR ORIGINAL CONTAINERS UNLESS THEY ARE NOT
- h. ORIGINAL LABELS AND MATERIAL SAFETY DATA SHALL BE RETAINED FOR IMPORTANT SURPLUS PRODUCT THAT MUST BE DISPOSED OF SHALL BE DISCARDED ACCORDING TO
- THE MANUFACTURER'S RECOMMENDED METHODS OF DISPOSAL PRODUCT SPECIFIC PRACTICES - THE FOLLOWING PRODUCT SPECIFIC PRACTICES SHALL BE
- FOLLOWED ON SITE: a. PETROLEUM PRODUCTS:
- ALL ON SITE VEHICLES SHALL BE MONITORED FOR LEAKS AND RECEIVE REGULAR PREVENTIVE MAINTENANCE TO REDUCE LEAKAGE; PETROLEUM PRODUCTS SHALL BE STORED IN TIGHTLY SEALED CONTAINERS WHICH ARE CLEARLY LABELED. ANY ASPHALT BASED SUBSTANCES USED ON SITE SHALL BE APPLIED ACCORDING TO THE MANUFACTURER'S RECOMMENDATIONS.
- b. FERTILIZERS: FERTILIZERS USED SHALL BE APPLIED ONLY IN THE MINIMUM AMOUNTS DIRECTED BY
- THE SPECIFICATIONS; ONCE APPLIED FERTILIZER SHALL BE WORKED INTO THE SOIL TO LIMIT EXPOSURE TO
- STORAGE SHALL BE IN A COVERED SHED OR ENCLOSED TRAILERS. THE CONTENTS OF ANY PARTIALLY USED BAGS OF FERTILIZER SHALL BE TRANSFERRED TO A SEALABLE PLASTIC BIN TO AVOID SPILLS.
- ALL CONTAINERS SHALL BE TIGHTLY SEALED AND STORED WHEN NOT REQUIRED FOR
- EXCESS PAINT SHALL NOT BE DISCHARGED TO THE STORM SEWER SYSTEM EXCESS PAINT SHALL BE DISPOSED OF PROPERLY ACCORDING TO MANUFACTURER'S
- INSTRUCTIONS OR STATE AND LOCAL REGULATIONS D. SPILL CONTROL PRACTICES - IN ADDITION TO GOOD HOUSEKEEPING AND MATERIAL MANAGEMENT PRACTICES DISCUSSED IN THE PREVIOUS SECTION, THE FOLLOWING PRACTICES SHALL BE FOLLOWED FOR SPILL PREVENTION AND CLEANUP:
- a. MANUFACTURER'S RECOMMENDED METHODS FOR SPILL CLEANUP SHALL BE CLEARLY POSTED AND SITE PERSONNEL SHALL BE MADE AWARE OF THE PROCEDURES AND THE LOCATION OF THE INFORMATION AND CLEANUP SUPPLIES; b. MATERIALS AND EQUIPMENT NECESSARY FOR SPILL CLEANUP SHALL BE KEPT IN THE MATERIAL STORAGE AREA ON SITE. EQUIPMENT AND MATERIALS SHALL INCLUDE BUT
- NOT BE LIMITED TO BROOMS, DUSTPANS, MOPS, RAGS, GLOVES, GOGGLES, KITTY LITTER, SAND, SAWDUST AND PLASTIC OR METAL TRASH CONTAINERS SPECIFICALLY c. ALL SPILLS SHALL BE CLEANED UP IMMEDIATELY AFTER DISCOVERY AND REPORTED TO
- d. THE SPILL AREA SHALL BE KEPT WELL VENTILATED AND PERSONNEL SHALL WEAR APPROPRIATE PROTECTIVE CLOTHING TO PREVENT INJURY FROM CONTACT WITH A HAZARDOUS SUBSTANCE;
- e. SPILLS OF TOXIC OR HAZARDOUS MATERIAL SHALL BE REPORTED TO THE APPROPRIATE LOCAL, STATE OR FEDERAL AGENCIES AS REQUIRED; f. THE SITE SUPERINTENDENT RESPONSIBLE FOR DAY-TO-DAY SITE OPERATIONS SHALL BE THE SPILL PREVENTION AND CLEANUP COORDINATOR.
- E. VEHICLE FUELING AND MAINTENANCE PRACTICE: a. CONTRACTOR SHALL MAKE AN EFFORT TO PERFORM EQUIPMENT/VEHICLE FUELING AND MAINTENANCE AT AN OFF-SITE FACILITY;
- b. CONTRACTOR SHALL PROVIDE AN ON-SITE FUELING AND MAINTENANCE AREA THAT IS CLEAN AND DRY;
- c. IF POSSIBLE THE CONTRACTOR SHALL KEEP AREA COVERED; d. CONTRACTOR SHALL KEEP A SPILL KIT AT THE FUELING AND MAINTENANCE AREA; e. CONTRACTOR SHALL REGULARLY INSPECT VEHICLES FOR LEAKS AND DAMAGE;

f. CONTRACTOR SHALL USE DRIP PANS, DRIP CLOTHS, OR ABSORBENT PADS WHEN

EROSION CONTROL OBSERVATIONS AND MAINTENANCE PRACTICES THIS PROJECT EXCEEDS ONE (1) ACRE OF DISTURBANCE AND THUS REQUIRES A SWPPP.

THE FOLLOWING REPRESENTS THE GENERAL OBSERVATION AND REPORTING PRACTICES THAT SHALL BE FOLLOWED AS PART OF THIS PROJECT: 1. AN OBSERVATION REPORT SHALL BE MADE AFTER EACH OBSERVATION AND DISTRIBUTED TO

- THE ENGINEER, THE OWNER, AND THE CONTRACTOR; 2. A REPRESENTATIVE OF THE SITE CONTRACTOR, SHALL BE RESPONSIBLE FOR MAINTENANCE
- AND REPAIR ACTIVITIES; 3. IF A REPAIR IS NECESSARY, IT SHALL BE INITIATED WITHIN 24 HOURS OF REPORT;

4. AN NPDES NOTICE OF INTENT SHALL BE SUBMITTED. **CITY OF PORTSMOUTH BUFFER VEGETATION NOTES**

NO SCALE

1. PLANT AT SAME DEPTH AS PREVIOUSLY PLANTED, OR WITHIN 2" ABOVE.

SHRUB PLANTING NO SCALE

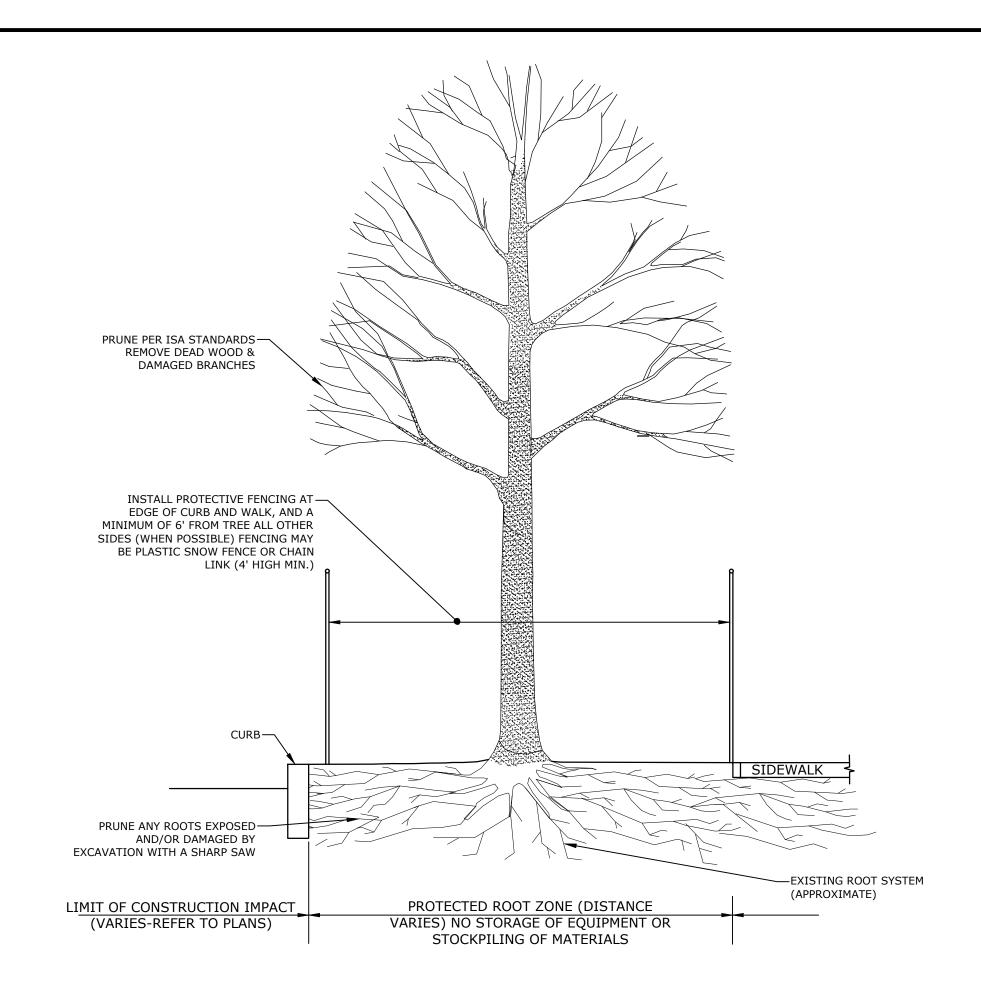

PART 1 - GENERAL:

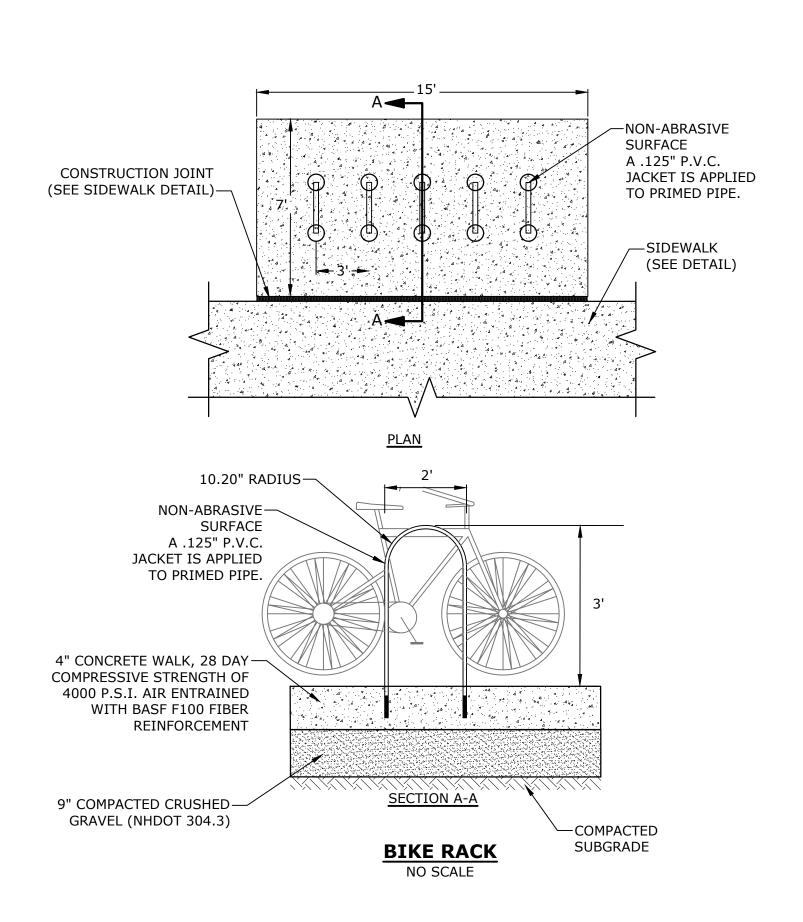

1.1 THE BASE OF THE CITY OF PORTSMOUTH TREE PLANTING REQUIREMENTS IS THE ANSI A300 PART 6 STANDARD PRACTICES FOR PLANTING AND TRANSPLANTING. ANSI A300 PART 6 LAYS OUT TERMS AND BASIC STANDARDS AS SET FORTH BY INDUSTRY BUT IT IS NOT THE "END ALL" FOR THE CITY OF PORTSMOUTH. THE FOLLOWING ARE THE CITY OF PORTSMOUTH, NH TREE PLANTING REQUIREMENTS THAT ARE IN ADDITION TO OR THAT GO BEYOND THE ANSI A300 PART 6.

PART 2 - EXECUTION:

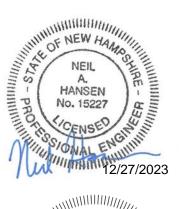

- 2.1 ALL PLANTING HOLES SHALL BE DUG BY HAND NO MACHINES. THE ONLY EXCEPTIONS ARE NEW CONSTRUCTION WHERE NEW PLANTING PITS, PLANTING BEDS WITH GRANITE CURBING, AND PLANTING SITES WITH SILVA CELLS ARE BEING CREATED. IF A MACHINE IS USED TO DIG IN ANY OF THESE SITUATIONS AND PLANTING DEPTH NEEDS TO BE RAISED THE MATERIAL IN THE BOTTOM OF THE PLANTING HOLE MUST BE FIRMED WITH MACHINE TO PREVENT SINKING OF THE ROOT BALL.
- 2.2 ALL WIRE AND BURLAP SHALL BE REMOVED FROM THE ROOT BALL AND PLANTING HOLE.
- 2.3 THE ROOT BALL OF THE TREE SHALL BE WORKED SO THAT THE ROOT COLLAR OF THE TREE IS VISIBLE AND NO GIRDLING ROOTS ARE PRESENT.
- 2.4 THE ROOT COLLAR OF THE TREE SHALL BE 2"-3" ABOVE GRADE OF PLANTING HOLE FOR FINISHING DEPTH.
- 2.5 ALL PLANTINGS SHALL BE BACKFILLED WITH SOIL FROM THE SITE AND AMENDED NO MORE THAN 20% WITH ORGANIC COMPOST. THE ONLY EXCEPTIONS ARE NEW CONSTRUCTION WHERE ENGINEERED SOIL IS BEING USED IN CONJUNCTION WITH SILVA CELLS AND WHERE NEW PLANTING BEDS ARE BEING CREATED.
- 2.6 ALL PLANTINGS SHALL BE BACKFILLED IN THREE LIFTS AND ALL LIFTS SHALL BE WATERED SO THE PLANTING WILL BE SET AND FREE OF AIR POCKETS — NO EXCEPTIONS.
- 2.7 AN EARTH BERM SHALL BE PLACED AROUND THE PERIMETER OF THE PLANTING HOLE EXCEPT WHERE CURBED PLANTING BEDS OR PITS ARE BEING USED.
- 2.8 2"-3" OF MULCH SHALL BE PLACED OVER THE PLANTING AREA.
- 2.9 AT THE TIME OF PLANTING IS COMPLETE THE PLANTING SHALL RECEIVE ADDITIONAL WATER TO ENSURE COMPLETE HYDRATION OF THE ROOTS, BACKFILL MATERIAL AND MULCH LAYER.
- 2.10 STAKES AND GUYS SHALL BE USED WHERE APPROPRIATE AND/OR NECESSARY. GUY MATERIAL SHALL BE NON-DAMAGING TO THE TREE.
- 2.11 ALL PLANTING STOCK SHALL BE SPECIMEN QUALITY, FREE OF DEFECTS, AND DISEASE OR INJURY. THE CITY OF PORTSMOUTH, NH RESERVES THE RIGHT TO REFUSE/REJECT ANY PLANT MATERIAL OR PLANTING ACTION THAT FAILS TO MEET THE STANDARDS SET FORTH IN THE ANSI A300 PART 6 STANDARD PRACTICES FOR PLANTING AND TRANSPORTATION AND/OR THE CITY OF PORTSMOUTH, NH PLANTING

- 0% NEW ENGLAND WETLAND PLANTS- NEW ENGLAND CONSERVATION WILDLIFE MIX

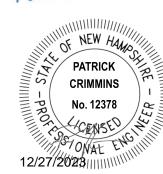

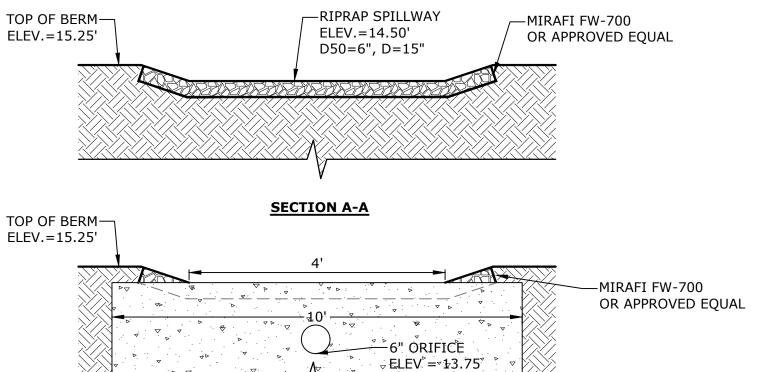

Tighe&Bond

- SEE GRADING, DRAINAGE & EROSION CONTROL PLANS, SHEET C-103, FOR LOCATIONS AND ELEVATIONS.
 THE FOUNDATION AREA OF THE SPILLWAY SHALL BE CLEARED AND GRUBBED OF ALL TREES, BRUSH, STUMPS, AND OTHER OBJECTIONABLE MATERIAL. MATERIALS REMOVED SHALL BE DISPOSED OF SO THEY WILL NOT INTERFERE WITH THE CONSTRUCTION OR PROPER FUNCTIONING OF THE SPILLWAY.
- 3. EARTH FILLS REQUIRED TO MEET SUBGRADE REQUIREMENTS BECAUSE OF OVER EXCAVATION OR TOPOGRAPHY SHALL BE COMPACTED TO THE SAME DENSITY AS THE SURROUNDING SOIL TO PREVENT UNEQUAL SETTLEMENT THAT COULD CAUSE DAMAGE TO THE COMPLETED SPILLWAY.
- RIP-RAP SHALL BE PLACED IN THE SPILLWAY PRIOR TO ALLOWING STORMWATER RUNOFF TO FLOW OVER THE WEIR.
 GEOTEXTILE FABRICS SHALL BE PROTECTED FROM PUNCTURE OR TEARING DURING PLACEMENT OF THE ROCK

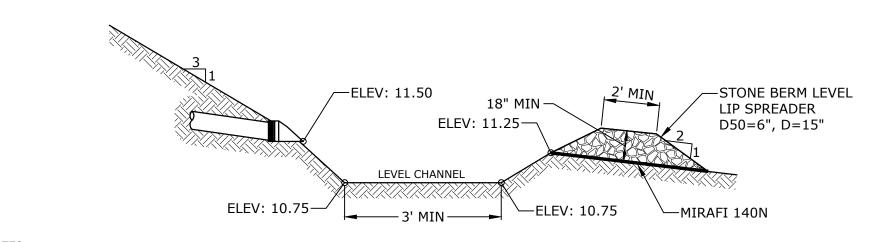

RIPRAP BY PLACING A CUSHION OF SAND OVER THE FABRIC. DAMAGED AREAS IN THE FABRIC SHALL BE

- REPAIRED BY PLACING A PIECE OF FABRIC OVER THE DAMAGED AREA OR BY COMPLETE REPLACEMENT OF THE FABRIC. ALL OVERLAPS REQUIRED FOR REPAIRS OR JOINING TWO PIECES OF FABRIC SHALL BE A MINIMUM OF 12 INCHES.

 6. A WELL GRADED MIXTURE OF ROCK SIZES SHALL BE USED FOR THE STONE. FIFTY PERCENT BY WEIGHT OF THE
- STONE MIXTURE SHALL BE SMALLER THAN THE MEDIAN SIZE STONE (d50). THE LARGEST STONE SIZE IN THE MIXTURE SHALL BE 1.5 TIMES THE d50 SIZE.

 7. STONES FOR RIPRAP SHALL BE ANGULAR OR SUBANGULAR. THE STONES SHALL BE SHAPED SO THAT THE LEAST
- DIMENSION OF THE STONE FRAGMENT SHALL BE NOT LESS THAN ONE-THIRD OF THE GREATEST DIMENSION OF THE FRAGMENT. FLAT ROCKS SHALL NOT BE USED FOR RIPRAP.

 8. STONE FOR THE RIPRAP MAY BE PLACED BY EQUIPMENT AND SHALL BE CONSTRUCTED TO THE FULL LAYER THICKNESS IN ONE OPERATION AND IN SUCH A MANNER AS TO PREVENT DISPLACEMENT OF THE UNDERLYING MATERIALS. HAND PLACEMENT MAY BE REQUIRED TO PREVENT DAMAGE TO ANY PERMANENT STRUCTURES.
- VOIDS IN THE ROCK RIPRAP SHOULD BE FILLED WITH SPALLS AND SMALLER ROCKS.
 RIPRAP CHANNELS SHOULD BE INSPECTED PERIODICALLY AND AFTER EVERY MAJOR STORM TO SEE THAT ROCK IS STILL IN PLACE. IF ROCK HAS BEEN DISPLACED OR UNDERMINED, THE DAMAGED AREAS SHALL BE REPAIRED
- 11. WOODY VEGETATION SHALL NOT BE ALLOWED TO BECOME ESTABLISHED IN THE ROCK RIPRAP, AND DEBRIS SHALL NOT BE ALLOWED TO ACCUMULATE IN THE CHANNEL.

NOTES:

1. CHANNEL BEFORE STONE BERM SHALL BE LEVEL THROUGHOUT.

| | Conditions | Applicant Response | <u>Sheet</u> |
| | Conditions from 11/16 Correspondence: | | |
| 1 | A split rail fence shall be installed beside the trail on the shoreline side to discourage foot traffic and general disturbance within the 50' buffer. | A split rail fence has been added to the site plan along the 50' buffer. | C-102 |
| | Trail shall not extend into the 50' buffer, with no manicured landscaping activity happening between the 0-50' buffer other than invasive species removal. | The proposed trail has been shown outside the 50' buffer and the community trail note #1.4 has been updated accordingly. | L-100 |
| | Erosion control measures will be used during the invasive species removal process to ensure no impact to wetland and salt marsh habitat. Please include these details on the plan set. | Erosion control measures have been depicted on the landscape plans. Woodland Restoration note #7 has been added to address that the erosion control measure must be installed for the duration of invasive removal and until the area has been fully stabilized. | L-100 & L-101 |
| | Applicant shall submit seasonal updates to the Planning & Sustainability Department once invasive species removal begins until plantings have gone in, and the buffer is stabilized. One year after plantings, if at least an 80% success rate has not been reached, applicants will replant and report back to the Planning & Sustainability Department one year after planting is complete and each subsequent year until an 80% planting success rate has been achieved. | A Community Space: Monitoring and Maintenance Plan has been prepared and included with the submission. | Community Space: Monitoring and Maintenance Plan |
| | Please add a note to the plan that no salt storage will be allowed within the wetland and/or wetland buffer. All salt storage on site must be covered to minimize impacts from runoff. | Site note #16 has been added to address this. | |
| 6 | The community trail shall have a minimum width of 5' with a maximum width of 6'. | Community Trail Note #1.2 has been updated accordingly. | |
| 7 | Pavement sweeping maintenance shall be performed between March and April for best results. | Section 1.3 of the Long Term Operation & Maintenance Plan has been updated to address that pavement sweeping shall occur between the months of March and April. | Long Term O&M Pla |
| 8 | Please relocate the proposed trash receptacle from the 0-50' buffer. | The trash receptacle has been removed from the plan. | |
| | Please include the locations of where signage designating public access and community space will be placed along path. Please include a detailed specification of the signs within the plan set, and include signage indicating that dogs must be leashed at all times. | The requested signs have been added to the site plan. In addition, the community space easement and signage located within the community space shall advise as to the following restrictions: 1. Access is from dusk to dawn only; 2. Dogs shall remain on leashes and owners shall pick up and remove dog waste off premises; 3. Access is limited to defined pathways only; 4. No camping, loitering, or picnicking; 5. No littering; 6. No alcoholic beverages or drugs allowed; 7. No music or loudspeakers allowed; 8. Police take notice; and 9. For use of Portsmouth residents only. | C-102 |
| | Please develop a long-term maintenance plan for the community space to be reviewed and approved by Planning and Sustainability Department staff and provided to the Planning Board with the Wetland Conditional Use Permit application for approval. | A Community Space: Monitoring and Maintenance Plan has been prepared and included with the submission. | Community Space: Monitoring and Maintenance Plan |
| | Please clarify in the final submission to the Planning Board the exact location of the proposed community trail. | Final alignment of the trail is subject to review and approval by the planning and sustainability director and any subsequent modification will be subject to the pb approval as a site plan amendment. | |
| | In accordance with Section 10.1018.40 of the Zoning Ordinance, applicant shall install permanent wetland boundary markers during project construction. These can be purchased through the City of Portsmouth Planning and Sustainability Department. | Acknowledged | |

Section 1 Project Description

The project is located at 815 Lafayette Road identified as Map 245 Lot 3 on the City of Portsmouth Tax Maps. The existing property is approximately 19.6 acres in size and is bound to the west by Route 1 and the abutting Lafayette Plaza shopping center property, to the north and east by the Winchester Place property, and to the south by Sagamore Creek. The proposed project is limited to approximately 4 acres of land near the southwest portion of the parcel herein referred to as the project site.

The proposed project consists of the demolition of the existing building along Sagamore Creek and the construction of three 4-story, 24-unit multi-family buildings (72 total units) with ground floor parking. The project will include associated site improvements such as parking, pedestrian access, utilities, stormwater management, lighting, and landscaping.

1.1 On-Site Soil Description

The project site consists of terrain that is generally sloping from the north to the south at grades below 10% with a step portion of terrain directly abutting the Sagamore Creek. The site has an approximate high point of elevation 23 located along the property line abutting the Lafayette Plaza property to the north.

A site specific soil survey was completed for the project and can be found in Appendix B of this report. Based on the soil survey, the runoff analyzed within this study has been modeled using Hydrologic Soil Group B soils.

1.2 Pre- and Post-Development Comparison

The pre-development and post-development watershed areas have been analyzed at one (1) distinct point of analysis (PA-1.) as well as an internal point of analysis (PA-2) While the points of analysis have remained unchanged, the contributing sub-catchment areas varied between pre-development and post-development conditions. These adjustments were made to reflect the differences in drainage patterns between the existing and proposed conditions. The overall area analyzed as part of this drainage analysis was held constant. PA-1 is located just off site at the sagamore creek, which is a tidal estuary. PA-2 is located at the location of the existing NHDOT Treatment swale along the southwestern portion of the site.

The peak discharge rates at these points of analysis were determined by analyzing Type III, 24-hour storm events. The rainfall data for these storm events were obtained from the data published by the Northeast Regional Climate Center at Cornell University, which can be found in Appendix C.

Furthermore, the site is located within a Coastal and Great Bay Community, therefore an added factor of safety of 15% was included as required by Env-Wq 1503.08(I).

1.3 Calculation Methods

The design storms analyzed in this study are the 2-year, 10-year, 25-year and 50-year 24-hour duration storm events. The stormwater modeling system, HydroCAD 10.0 was utilized to predict the peak runoff rates from these storm events. The peak discharge rates were determined by analyzing Type III 24-hour storm events. The rainfall data for these storm events were obtained from the data published by the Northeast Regional Climate Center at Cornell University, with an additional 15% added factor of safety as required by Env-Wq 1503.08(I).

The time of concentration was computed using the TR-55 Method, which provides a means of determining the time for an entire watershed to contribute runoff to a specific location via sheet flows, shallow concentrated flow, and channel flow. Runoff curve numbers were calculated by estimating the coverage areas and then summing the curve number for the coverage area as a percent of the entire watershed.

Section 2 Pre-Development Conditions

To analyze the pre-development condition, the site has been modeled utilizing (2) distinct point of analysis (PA-1 & PA-2). These points of analysis and watersheds are depicted on the plan entitled "Pre-Development Watershed Plan", Sheet C-801.

The points of analysis and their contributing watershed areas are described below:

Point of Analysis (PA-1)

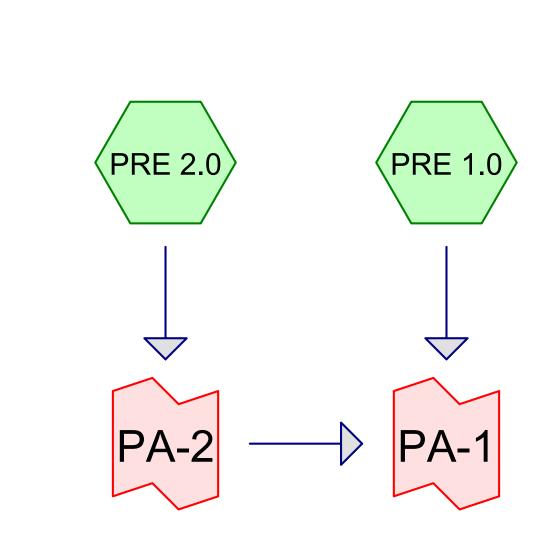

Point of analysis 1 is comprised of one subcatchment area (PRE 1.0). This area is comprised of mostly impervious surfaces, grass, and woods with small portions of roofs and gravel surfaces. Runoff from this watershed sheet flows untreated stormwater directly into Sagamore Creek and ultimately the Piscatagua River.

Point of Analysis (PA-2)

Point of analysis 2 is comprised of one subcatchment area (PRE 2.0). This area is comprised of impervious surfaces, grass, and woods with small portions of roofs and gravel surfaces. Runoff from this watershed either sheet flows stormwater directly into the NHDOT treatment swale or is collected by a subsurface drainage network owned by NHDOT and discharges to the same treatment swale. This swale discharges flows to the Sagamore Creek and ultimately the Piscataqua River. Historic records show that this treatment swale was not designed to current stormwater treatment requirements and does not appear to provide any substantial advanced stormwater treatment.

Section 3 Post-Development Conditions

The post-development condition was analyzed by dividing the watersheds into five (5) watershed areas. Stormwater runoff from these sub-catchment areas flow via subsurface and surface drainage systems prior to discharging to an existing swale or proposed stone berm level spreader and ultimately the Sagamore Creek. Like the pre-development condition, flows from these sub-catchment areas are modeled at the same points of analysis (PA-1 & PA-2).

An underground detention system is included on the development site for the purpose of mitigating peak flowrates as well as mitigating temperature differences between the stormwater runoff and Sagamore Creek. Additionally, a Jellyfish Filter unit and Rain Garden are proposed for treatment purposes. The Jellyfish treatment unit located post detention, and is designed that flows greater than the 2-year storm event bypass the unit.

The points of analysis and their sub-catchment areas are depicted on the plan entitled "Post-Development Watershed Plan," Sheet C-802. The points of analysis and their contributing watershed areas are described below:

Point of Analysis (PA-1)

Post-development Watershed 1.0 (POST 1.0) is comprised mostly of the area surrounding the project site and is composed of mainly grass and wood with small portions of concrete sidewalk.

Post-development Watershed 1.1 (Post 1.1) is comprised of the majority of the development area. This watershed contains proposed buildings 2 and 3 as well as portions of its associated paved parking lots and sidewalks. Runoff from this watershed is captured by various catch basins and roof leaders connecting to a proposed underground detention system (Pond 1.1). The detention system discharges to the treatment unit, a Contech Jellyfish Stormwater Filter (Pond PJFF 1). Flows exiting the Jellyfish Filter discharge to the proposed stone berm level spreader which sheet flows to Sagamore Creek.

Post-development Watershed 1.2 (Post 1.2) is similar in nature to post-development Watershed 1.1. This watershed contains proposed building 1 as well as portions of its associated paved parking lots and sidewalks. Runoff from this watershed is also captured by various catch basins and a roof leader connecting to the closed drainage system downstream of the underground detention basin. Runoff from this area discharges to the same Jellyfish Filter which discharges to Sagamore Creek and ultimately the Piscataqua River.

Point of Analysis (PA-2)

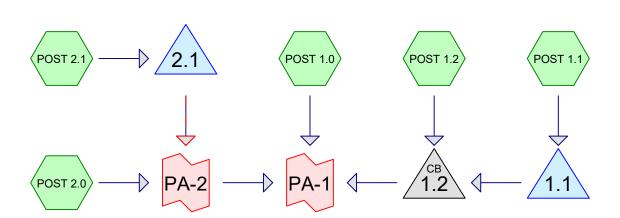

Post-development Watershed 2.0 (POST 2.0) is comprised of the area to the southwest of the project site and is composed of mainly grass and wood with small portions of concrete sidewalk.

Post-development watershed 2.1 (POST 2.1) is comprised of the proposed paved driveway and portions of the concrete sidewalk and grassed areas. Runoff from this watershed sheet

flows to the proprietary Rain Guardian Foxhole pretreatment device and ultimately to the proposed Rain Garden. This Rain Garden is designed to detail and treat the water quality volume before discharging to the existing DOT treatment swale via either the 6" perforated underdrain or the concrete riprap overflow weir. This existing DOT treatment swale discharges directly to the Sagamore Creek.

Section 4 Peak Rate Comparison

The following table summarizes and compares the pre- and post-development peak runoff rates from the 2-year, 10-year, 25-year and 50-year storm events at the point of analysis.

Table 4.1
Comparison of Pre- and Post-Development Flows (CFS)

| | 2-Year Storm | 10-Year Storm | 25-Year Storm | 50-Year Storm |
|----------------------------------|-----------------|------------------|------------------|------------------|
| Pre-Development Watershed | | | | |
| PA-1 | 5.53 | 12.55 | 18.60 | 24.42 |
| PA-2 | 0.56 | 1.47 | 2.28 | 3.08 |
| Post-Development Watershed | | | | |
| PA-1 | 5.96 | 11.39 | 16.05 | 23.18 |
| PA-2 | 0.21 | 1.03 | 1.69 | 2.55 |

The Peak Runoff Control Requirements of Env-Wq 1507.06 are not required to be met for the point of analysis per NHDES Alteration of Terrain regulation Env-Wq 1507.06(d). However, a detention system is included on the development site for the purpose of mitigating temperature differences. As shown in Table 1.2 the Post-development flows are decreased from the Pre-development flows for both points of analysis except for the 2-year peak runoff rate for Point of Analysis 1.

Section 5 Mitigation Description

The stormwater management system has been designed to provide stormwater treatment as required by the City of Portsmouth Site Review Regulations and NHDES AoT Regulations (Env-Wq 1500).

5.1 Pre-Treatment Methods for Protecting Water Quality

Pre-treatment for the stormwater filtration systems consists of off-line deep sump catch basins.

5.2 Treatment Methods for Protecting Water Quality.

The runoff from proposed impervious areas will be treated by a Contech Jellyfish stormwater filtration system as well as a Rain Garden bioretention system. These Jellyfish and Rain Garden systems are sized to treat the Water Quality Flow of their respective sub catchment areas. The Jellyfish Filter is outfitted with an internal bypass that diverts peak flows away from treatment. The BMP worksheets for the treatment practices have been included in Section 6 of this report.

The proposed stormwater management system is required to remove 80% of the annual Total Suspended Soils (TSS) loads and 50% of the annual Total Nitrogen (TN) loads per the City of Portsmouth's Site Plan regulations, Section 7.6.2.1.a.i. As shown in table 5.1 the pollutant removal efficiencies for the proposed treatment system exceeds the City of Portsmouth's removal requirements.

| Table 5.1 - Pollutant Removal Efficiencies | | | | | | |
|-------------------------------------------------|---------------------------|----------------|------------------|--|--|--|
| ВМР | Total Suspended Solids | Total Nitrogen | Total Phosphorus | | | |

- 1. Pollutant removal efficiencies from Rain Guardian, Foxhole performance testing results.
- 2. Pollutant removal efficiencies from NH Stormwater Manual Volume 2, Appendix E.

5.3 DOT Treatment Swale

The proposed project includes the removal of an existing catch basin at the entrance of the property that was connected to NHDOT's closed drainage system. This closed drainage system discharges stormwater to the NHDOT BMP 0373 Treatment Swale. The proposed drainage system has been designed to reduce stormwater flows that discharge to this treatment swale as a result of this project. As depicted in table 4.1, the flows discharging to Point of Analysis 2 have been reduced for all storm events.

In addition to the reduction of peak flow rates, the proposed drainage design treats approximately 10,000 SF of post-development area where the existing conditions does not treat any area prior to discharging to the treatment swale.

Section 6 BMP Worksheet

General Calculations - WQV and WQF (optional worksheet)

This worksheet may be useful when designing a BMP that does not fit into one of the specific worksheets already provided (i.e. for a technology which is not a stormwater wetland, infiltration practice, etc.)

Water Quality Volume (WQV)

| 1.64 ac | A = Area draining to the practice |
|---------------|-----------------------------------------------------------------------|
| 1.45 ac | A_{I} = Impervious area draining to the practice |
| 0.88 decimal | I = percent impervious area draining to the practice, in decimal form |
| 0.85 unitless | Rv = Runoff coefficient = 0.05 + (0.9 x I) |
| 1.39 ac-in | WQV=1" x Rv x A |
| 5,035 cf | WQV conversion (ac-in x 43,560 sf/ac x 1ft/12") |

Water Quality Flow (WQF)

| 1 | inches | P = amount of rainfall. For WQF in NH, $P = 1$ ". |
|-------|-------------------------|--------------------------------------------------------------------------------------------------------------------------|
| 0.85 | inches | Q = water quality depth. Q = WQV/A |
| 99 | unitless | $CN = unit peak discharge curve number. CN = \frac{1000}{(10+5P+10Q-10*[Q^2 + 1.25*Q*P]^{0.5})}$ |
| 0.1 | inches | S = potential maximum retention. $S = (1000/CN) - 10$ |
| 0.029 | inches | Ia = initial abstraction. Ia = 0.2S |
| 5.0 | minutes | $T_c = Time of Concentration$ |
| 640.0 | cfs/mi ² /in | qu is the unit peak discharge. Obtain this value from TR-55 exhibits 4-II and 4-III |
| 1.387 | cfs | WQF = $q_u x$ WQV. Conversion: to convert "cfs/mi ² /in * ac-in" to "cfs" multiply by 1mi ² /640ac |

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24.000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Rockingham County, New Hampshire Survey Area Data: Version 26, Aug 22, 2023

Soil map units are labeled (as space allows) for map scales 1:50.000 or larger.

Date(s) aerial images were photographed: Jun 19, 2020—Sep 20. 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

| Map Unit Symbol | Map Unit Name | Acres in AOI | Percent of AOI |

| Totals for Area of Interest | | 6.0 | 100.0% |

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

Custom Soil Resource Report

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Rockingham County, New Hampshire

299—Udorthents, smoothed

Map Unit Setting

National map unit symbol: 9cmt

Elevation: 0 to 840 feet

Mean annual precipitation: 44 to 49 inches Mean annual air temperature: 48 degrees F

Frost-free period: 155 to 165 days

Farmland classification: Not prime farmland

Map Unit Composition

mcuomosoil@gmail.com

Neil Hansen, P.E. Tighe & Bond, Inc. 177 Corporate Drive Portsmouth, NH 03801

11 December 2023

Dear Mr. Hansen;

This report is in reference to the property at 815 Lafayette Road in Portsmouth, NH. Field work for a Site Specific Soil Map was completed on 7 December 2023 in compliance with soil mapping requirements of NHDES Env-Wq 1504.09, Alteration of Terrain. Only that portion of the site proposed for redevelopment was mapped. The proposed use is multifamily housing served by municipal sewer and water service.

The Site Specific Soil Map and this report meet 'Site Specific Soil Mapping Standards for New Hampshire and Vermont' SSSNNE publication number three. Hydrologic Soil Groups were determined using best fit with SSSNNE publication number five. This report is a component of the Site Specific Soil Map and must be submitted with it for regulatory review.

Soil Map Unit Descriptions

Two human disturbed soil types were identified and are detailed below. Seven test pits were dug in the locations shown and were used to make this soil map. The test pit data is attached at the rear of this report. The part of the site which is paved and occupied by buildings was not mapped.

Udorthents, loamy (500)

Landscape setting and surface features: this soil has been significantly modified by construction and occupation of this commercial property. The surface has been leveled and smoothed.

Natural soil drainage class: moderately well drained.

Parent material: excavated, regraded, and filled glacial till soils with bedrock deeper than five feet.

Typical Description: see test pit two.

Dissimilar inclusions: human disturbance makes these map units highly variable. Test pit one is an inclusion with sandy fill, rather than loamy fill. Test pit four is well drained. Test pit four is an inclusion of marine origin silts. Within the 500B map units there are small areas of steeper slopes.

Hydrologic soil group: B.

Other distinguished features of this soil: This soil is highly variable over short distances.

Udorthents, bedrock controlled (550)

Landscape setting and surface features: this soil has been significantly modified by construction and occupation of this commercial property. The surface has been leveled and smoothed. Natural soil drainage class: well drained.

Parent material: excavated, regraded, and filled glacial till soils with depth of bedrock shallower than five feet.

Typical Description: see test pit six.

Dissimilar inclusions: human disturbance makes these map units highly variable. Test pit seven is an inclusion of the moderately deep (20 to 40 inches) to bedrock Chatfield soil. Hydrologic soil group: B.

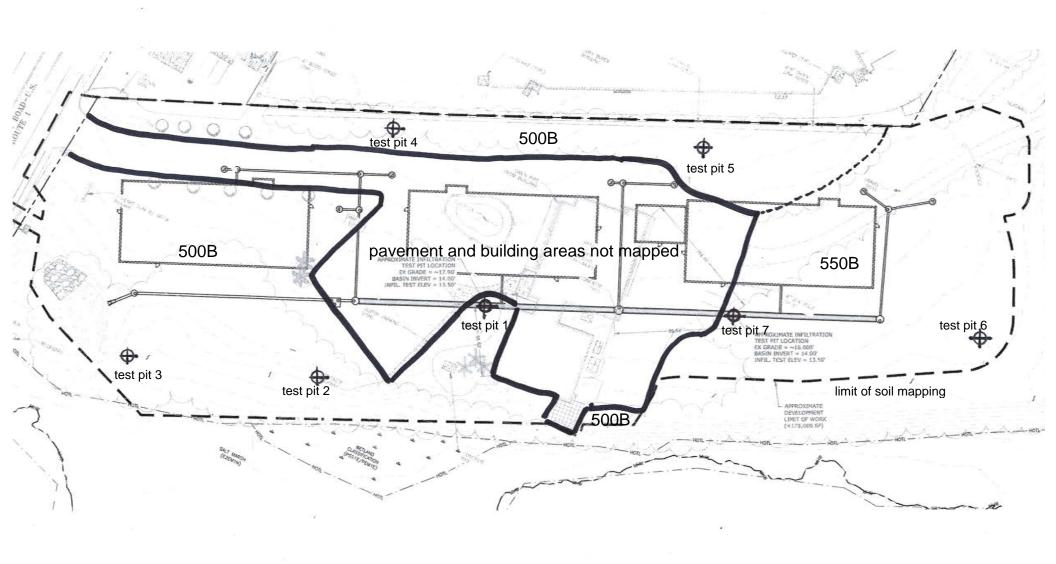

Other distinguished features of this soil: This soil is highly variable over short distances.

Please call if you have questions regarding this work.

Sincerely,

Michael Cuomo

NH Certified Soil Scientist #6

Proposed Multi-Family Development 815 Lafayette Rd Portsmouth, NH

Long-Term Operation & Maintenance Plan

Prospect North 815, LLC

October 23, 2023

Last Revised: December 27, 2023

Tighe&Bond

Section 1 Long-Term Operation & Maintenance Plan

It is the intent of this Operation and Maintenance Plan to identify the areas of this site that need special attention and consideration, as well as implement a plan to assure routine maintenance. By identifying the areas of concern as well as implementing a frequent and routine maintenance schedule the site will maintain a high-quality stormwater runoff.

1.1 Contact/Responsible Party

Prospect North 815, LLC PO Box 372 Greenland, NH 03857

(Note: The contact information for the Contact/Responsible Party shall be kept current. If ownership changes, the Operation and Maintenance Plan must be transferred to the new party.)

1.2 Maintenance Items

Maintenance of the following items shall be recorded:

- Litter/Debris Removal
- Landscaping
- Catchbasin Cleaning
- Pavement Sweeping
- Underground Detention System
- Contech Jellyfish Filtration System
- Rain Garden
- Rip Rap
- Rain Guardian Fox Hole

The following maintenance items and schedule represent the minimum action required. Periodic site inspections shall be conducted, and all measures must be maintained in effective operating condition. The following items shall be observed during site inspection and maintenance:

- Inspect vegetated areas, particularly slopes and embankments for areas of erosion. Replant and restore as necessary
- Inspect catch basins for sediment buildup
- Inspect site for trash and debris

1.3 Overall Site Operation & Maintenance Schedule

| Maintenance Item | Frequency of Maintenance |
|-------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| Litter/Debris Removal | Weekly |
| Pavement Sweeping - Sweep impervious areas to remove sand and litter. | Annually (March or April) ¹ |
| Landscaping - Landscaped islands to be maintained and mulched. | Maintained as required and mulched each Spring |
| Catch Basin (CB) Cleaning - CB to be cleaned of solids and oils. | Annually |
| Contech Jelly Fish Unit | In accordance with Manufacturer's Recommendations (See section 1.5) |
| Underground Detention Basin - Visual observation of sediment levels within system | Bi-Annually (See Section 1.4) |
| Rain Garden - Trash and debris to be removed Any required maintenance shall be addressed. | Two (2) times annually and after any rainfall event exceeding 2.5" in a 24-hr period. |
| Rip Rap & Stone Berm Level Spreader | Annually |
| Rain Guardian Fox Hole | In accordance with Manufacturer's Recommendations (See section 1.8) |

¹ Pavement sweeping shall occur after all surface snow and snowbanks have melted. For best results pavement sweeping should be completed after the last snow storm of the year.

1.3.1 Disposal Requirements

Disposal of debris, trash, sediment and other waste material should be done at suitable disposal/recycling sites and in compliance with all applicable local, state and federal waste regulations.

1.4 Underground Detention System Maintenance Requirements

| Underground Detention System Inspection/Maintenance Requirements | | | | | | | | | |
|------------------------------------------------------------------|---------------------------|------------------------------------------------------------------------------------------------------------------------|--|--|--|--|--|--|--|
| Inspection/ Maintenance | Frequency | Action | | | | | | | |
| Monitor inlet and outlet structures for sediment accumulation | Two (2) times annually | - Trash, debris and sediment to be removed - Any required maintenance shall be addressed | | | | | | | |
| Deep Sump Catchbasins | Two (2) times annually | Removal of sediment as warranted by inspection No less than once annually | | | | | | | |
| Monitor detention system for sediment accumulation | Two (2) times annually | Trash, debris and sediment to be removedAny required maintenance shall be addressed | | | | | | | |

1.5 Contech Jellyfish Filter System Maintenance Requirements

| Contech Jellyfish Filter System Inspection/Maintenance Requirements | | | | | | | | |
|---------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|-----------------------------------------------------------|--|--|--|--|--|--|
| Inspection/ Maintenance | Frequency | Action | | | | | | |
| Inspect vault for sediment build up, static water, plugged media and bypass condition | Quarterly during the first year of operation, Minimum of annually in subsequent years | - See section 4 & 5 of Jellyfish Filter Owner's Manual | | | | | | |
| Replace Cartridges | As required by inspection, 1-5 years. | - See section 6 & 7 of Jellyfish Filter Owner's Manual | | | | | | |

1.6 Rain Garden Maintenance Requirements

| Rain Garden Inspection/Maintenance Requirements | | | | |
|------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| Inspection/ Frequency Maintenance | | Action | | |
| Monitor to ensure that Rain Gardens function effectively after storms | Two (2) times annually and after any rainfall event exceeding 2.5" in a 24-hr period | - Trash and debris to be removed - Any required maintenance shall be addressed | | |
| Inspect Vegetation | Annually | Inspect the condition of all Rain Garden vegetation Prune back overgrowth Replace dead vegetation Remove any invasive species | | |
| Inspect Drawdown Time - The system shall drawdown within 48- hours following a rainfall event. | Annually | - Assess the condition of the facility to determine measures required to restore the filtration function, including but not limited to removal of accumulated sediments or reconstruction of the filter. | | |

1.7 Rip Rap Maintenance Requirements

| Rip Rap Inspection/Maintenance Requirements | | | |
|---------------------------------------------|-----------|----------------------------------------------------------------------------------------------------|--|
| Inspection/ Maintenance | Frequency | Action | |
| Visual Inspection | Annually | Visually inspect for damage and deteriorationRepair damages immediately | |

1.8 Rain Guardian Fox Hole Maintenance Requirements

Rain Guardian Maintenance Guide

PRETREATMENT FOR BIORETENTION

COMMERCIAI /INDIISTRIAI

KESIDEN HAL

Maintenance Guide

Rain Guardian pretreatment chambers simplify bioretention maintenance by collecting sand, leaves, grass clippings, and other debris in an easy to clean, confined location. Regularly maintaining the Rain Guardian sustains its functionality by maximizing storage and filtration capacities. Maintenance frequency is variable and depends on many factors such as rainfall frequency, drainage area size and land use type, and season of the year. The general cleaning process is identical for the Rain Guardian Turret and Rain Guardian Bunker.

Following rain events, inspect the pretreatment chamber for debris on the top metal grate, within the chamber, and on the vertical, drop-in filter wall. The maintenance steps described below should be completed if areas of the top metal grate are clogged, the chamber is >75% full, or the vertical filter wall is clogged. Maintenance should be completed when stormwater has completely drained from the bioretention practice. The filter wall allows the chamber to dry between rain events, which further simplifies maintenance by ensuring removed debris is largely dry. Ensure all debris collected during cleaning of the chamber is completely removed from the site and properly disposed of according to local environmental rules. Once cleaning is complete, reinstall the filter wall with filter fabric facing the inside of the chamber and replace the top metal grate.

Clear Debris from Top Metal Grate

- Leaf litter and garbage commonly accumulate on the top metal grate
- Simply remove and dispose of debris by hand or with a shovel prior to removing top grate

Remove Debris from Inside Chamber

- Remove top metal grate and place on paved inlet to avoid damage to nearby plants
- Remove and dispose of accumulated debris within chamber using a shovel

Clean Filter Wall

- Remove drop-in filter by lifting vertically
- · Clean filter wall with a stiff bristled broom or rinse clean with pressurized water

www.RainGuardian.biz

1318 McKay Dr. NE, Suite 300 **ONSERVATION** Ham Lake, MN 55304 (763) 434-2030 (M-F 8:00-4:30)

1.9 Snow & Ice Management for Standard Asphalt and Walkways

Snow storage areas shall be located such that no direct untreated discharges are possible to receiving waters from the storage site (snow storage areas have been shown on the Site Plan). The property manager will be responsible for timely snow removal from all private sidewalks, driveways, and parking areas. Any snow accumulation beyond a height of 3' in the snow storage areas will be hauled off-site and legally disposed of. Salt storage areas shall be covered or located such that no direct untreated discharges are possible to receiving waters from the storage site. Salt and sand shall be used to the minimum extent practical (refer to the attached for de-icing application rate guideline from the New Hampshire Stormwater Management Manual, Volume 2,).

Deicing Application Rate Guidelines

24' of pavement (typcial two-lane road)

These rates are not fixed values, but rather the middle of a range to be selected and adjusted by an agency according to its local conditions and experience.

| | | | | Pounds per tw | o-lane mile | |
|---------------------------------------------|-----------------------------|-----------------------------------------------------|---------------------------------------------------|-----------------------------------------------------|--------------------|------------------------------------------|
| Pavement Temp. (°F) and Trend (↑↓) | Weather Condition | Maintenance Actions | Salt Prewetted / Pretreated with Salt Brine | Salt Prewetted / Pretreated with Other Blends | Dry Salt* | Winter Sand (abrasives) |

Section 2 Invasive Species

With respect to a particular ecosystem, any species, including its seeds, eggs, spores, or other biological material capable of propagating that species, that is not native to that ecosystem is classified as an invasive species. Refer to the following fact sheet prepared by the University of New Hampshire Cooperative Extension entitled Methods for Disposing Non-Native Invasive Plants for recommended methods to dispose of invasive plant species.

UNIVERSITY of NEW HAMPSHIRE Methods for Disposing OOPERATIVE EXTENSION

Non-Native Invasive Plants

Prepared by the Invasives Species Outreach Group, volunteers interested in helping people control invasive plants. Assistance provided by the Piscataquog Land Conservancy and the NH Invasives Species Committee. Edited by Karen Bennett, Extension Forestry Professor and Specialist.

Tatarian honeysuckle Lonicera tatarica

USDA-NRCS PLANTS Database / Britton, N.L., and A. Brown. 1913. An illustrated flora of the northern United States, Canada and the British Possessions. Vol. 3: 282.

Non-native invasive plants crowd out natives in natural and managed landscapes. They cost taxpayers billions of dollars each year from lost agricultural and forest crops, decreased biodiversity, impacts to natural resources and the environment, and the cost to control and eradicate them.

Invasive plants grow well even in less than desirable conditions such as sandy soils along roadsides, shaded wooded areas, and in wetlands. In ideal conditions, they grow and spread even faster. There are many ways to remove these nonnative invasives, but once removed, care is needed to dispose the removed plant material so the plants don't grow where disposed.

Knowing how a particular plant reproduces indicates its method of spread and helps determine

the appropriate disposal method. Most are spread by seed and are dispersed by wind, water, animals, or people. Some reproduce by vegetative means from pieces of stems or roots forming new plants. Others spread through both seed and vegetative means.

Because movement and disposal of viable plant parts is restricted (see NH Regulations), viable invasive parts can't be brought to most transfer stations in the state. Check with your transfer station to see if there is an approved, designated area for invasives disposal. This fact sheet gives recommendations for rendering plant parts nonviable.

Control of invasives is beyond the scope of this fact sheet. For information about control visit www.nhinvasives.org or contact your UNH Cooperative Extension office.

New Hampshire Regulations

Prohibited invasive species shall only be disposed of in a manner that renders them nonliving and nonviable. (Agr. 3802.04)

No person shall collect, transport, import, export, move, buy, sell, distribute, propagate or transplant any living and viable portion of any plant species, which includes all of their cultivars and varieties, listed in Table 3800.1 of the New Hampshire prohibited invasive species list. (Agr 3802.01)

How and When to Dispose of Invasives?

To prevent seed from spreading remove invasive plants before seeds are set (produced). Some plants continue to grow, flower and set seed even after pulling or cutting. Seeds can remain viable in the ground for many years. If the plant has flowers or seeds, place the flowers and seeds in a heavy plastic bag "head first" at the weeding site and transport to the disposal site. The following are general descriptions of disposal methods. See the chart for recommendations by species.

Burning: Large woody branches and trunks can be used as firewood or burned in piles. For outside burning, a written fire permit from the local forest fire warden is required unless the ground is covered in snow. Brush larger than 5 inches in diameter can't be burned. Invasive plants with easily airborne seeds like black swallow-wort with mature seed pods (indicated by their brown color) shouldn't be burned as the seeds may disperse by the hot air created by the fire.

Bagging (solarization): Use this technique with softertissue plants. Use heavy black or clear plastic bags (contractor grade), making sure that no parts of the plants poke through. Allow the bags to sit in the sun for several weeks and on dark pavement for the best effect.

Japanese knotweed
Polygonum cuspidatum
USDA-NRCS PLANTS Database /
Britton, N.L., and A. Brown. 1913. An
illustrated flora of the northern United
States, Canada and the British
Possessions Vol. 1: 676

Tarping and Drying: Pile material on a sheet of plastic and cover with a tarp, fastening the tarp to the ground and monitoring it for escapes. Let the material dry for several weeks, or until it is clearly nonviable.

Chipping: Use this method for woody plants that don't reproduce vegetatively.

Burying: This is risky, but can be done with watchful diligence. Lay thick plastic in a deep pit before placing the cut up plant material in the hole. Place the material away from the edge of the plastic before covering it with more heavy plastic. Eliminate as much air as possible and toss in soil to weight down the material in the pit. Note that the top of the buried material should be at least three feet underground. Japanese knotweed should be at least 5 feet underground!

Drowning: Fill a large barrel with water and place soft-tissue plants in the water. Check after a few weeks and look for rotted plant material (roots, stems, leaves, flowers). Well-rotted plant material may be composted. A word of caution- seeds may still be viable after using this method. Do this before seeds are set. This method isn't used often. Be prepared for an awful stink!

Composting: Invasive plants can take root in compost. Don't compost any invasives unless you know there is no viable (living) plant material left. Use one of the above techniques (bagging, tarping, drying, chipping, or drowning) to render the plants nonviable before composting. Closely examine the plant before composting and avoid composting seeds.

Suggested Disposal Methods for Non-Native Invasive Plants

This table provides information concerning the disposal of removed invasive plant material. If the infestation is treated with herbicide and left in place, these guidelines don't apply. Don't bring invasives to a local transfer station, unless there is a designated area for their disposal, or they have been rendered non-viable. This listing includes wetland and upland plants from the New Hampshire Prohibited Invasive Species List. The disposal of aquatic plants isn't addressed.

| Woody Plants | Method of Reproducing | Methods of Disposal |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Norway maple (Acer platanoides) European barberry (Berberis vulgaris) Japanese barberry (Berberis thunbergii) autumn olive (Elaeagnus umbellata) burning bush (Euonymus alatus) Morrow's honeysuckle (Lonicera morrowii) Tatarian honeysuckle (Lonicera tatarica) showy bush honeysuckle (Lonicera x bella) common buckthorn (Rhamnus cathartica) glossy buckthorn (Frangula alnus) | Fruit and Seeds | Prior to fruit/seed ripening Seedlings and small plants Pull or cut and leave on site with roots exposed. No special care needed. Larger plants Use as firewood. Make a brush pile. Chip. Burn. After fruit/seed is ripe Don't remove from site. Burn. Make a covered brush pile. Chip once all fruit has dropped from branches. Leave resulting chips on site and monitor. |
| oriental bittersweet (Celastrus orbiculatus) multiflora rose (Rosa multiflora) | Fruits, Seeds, Plant Fragments | Prior to fruit/seed ripening Seedlings and small plants Pull or cut and leave on site with roots exposed. No special care needed. Larger plants Make a brush pile. Burn. After fruit/seed is ripe Don't remove from site. Burn. Make a covered brush pile. Chip – only after material has fully dried (1 year) and all fruit has dropped from branches. Leave resulting chips on site and monitor. |

| Non-Woody Plants | Method of Reproducing | Methods of Disposal |

| garlic mustard (Alliaria petiolata) spotted knapweed (Centaurea maculosa) Sap of related knapweed can cause skin irritation and tumors. Wear gloves when handling. black swallow-wort (Cynanchum nigrum) May cause skin rash. Wear gloves and long sleeves when handling. pale swallow-wort (Cynanchum rossicum) giant hogweed (Heracleum mantegazzianum) Can cause major skin rash. Wear gloves and long sleeves when handling. dame's rocket (Hesperis matronalis) perennial pepperweed (Lepidium latifolium) purple loosestrife (Lythrum salicaria) Japanese stilt grass (Microstegium vimineum) mile-a-minute weed (Polygonum perfoliatum) | Fruits and Seeds | Prior to flowering Depends on scale of infestation Small infestation Pull or cut plant and leave on site with roots exposed. Large infestation Pull or cut plant and pile. (You can pile onto or cover with plastic sheeting). Monitor. Remove any re-sprouting material. During and following flowering Do nothing until the following year or remove flowering heads and bag and let rot. Small infestation Pull or cut plant and leave on site with roots exposed. Large infestation Pull or cut plant and pile remaining material. (You can pile onto plastic or cover with plastic sheeting). Monitor. Remove any re-sprouting material. |
| common reed (Phragmites australis) Japanese knotweed (Polygonum cuspidatum) Bohemian knotweed (Polygonum x bohemicum) | Fruits, Seeds, Plant Fragments Primary means of spread in these species is by plant parts. Although all care should be given to preventing the dispersal of seed during control activities, the presence of seed doesn't materially influence disposal activities. | Small infestation Bag all plant material and let rot. Never pile and use resulting material as compost. Burn. Large infestation Remove material to unsuitable habitat (dry, hot and sunny or dry and shaded location) and scatter or pile. Monitor and remove any sprouting material. Pile, let dry, and burn. |

Managing Invasive Plants Methods of Control by Christopher Mattrick

They're out there. The problem of invasive plants is as close as your own backyard.

Maybe a favorite dogwood tree is struggling in the clutches of an Oriental bittersweet vine. Clawlike canes of multiflora rose are scratching at the side of your house. That handsome burning bush you planted few years ago has become a whole clump in practically no time ... but what happened to the azalea that used to grow right next to it?

If you think controlling or managing invasive plants on your property is a daunting task, you're not alone. Though this topic is getting lots of attention from federal, state, and local government agencies, as well as the media, the basic question for most homeowners is simply, "How do I get rid of the invasive plants in my own landscape?" Fortunately, the best place to begin to tackle this complex issue is in our own backyards and on local conservation lands. We hope the information provided here will help you take back your yard. We won't kid you—there's some work involved, but the payoff in beauty, wildlife habitat, and peace of mind makes it all worthwhile.

PLAN OF ATTACK

Three broad categories cover most invasive plant control: mechanical, chemical, and biological. Mechanical control means physically removing plants from the environment

Spraying chemicals to control invasive plants.

through cutting or pulling. Chemical control uses herbicides to kill plants and inhibit regrowth. Techniques and chemicals used will vary depending on the species. Biological controls use plant diseases or insect predators, typically from the targeted species' home range. Several techniques may be effective in controlling a single species, but there is usually one preferred method—the one that is most resource efficient with minimal impact on non-target species and the environment.

MECHANICAL CONTROL METHODS

Mechanical treatments are usually the first ones to look at when evaluating an invasive plant removal project. These procedures do not require special licensing or introduce chemicals into the environment. They do require permits in some situations, such as wetland zones. [See sidebar on page 23.] Mechanical removal is highly labor intensive and creates a significant amount of site disturbance, which can lead to rapid reinvasion if not handled properly.

Pulling and digging

Many herbaceous plants and some woody species (up to about one inch in diameter), if present in limited quantities, can be pulled out or dug up. It's important to remove as much of the root system as possible; even a small portion can restart the infestation. Pull plants by hand or use a digging fork, as shovels can shear off portions of the root

system, allowing for regrowth. To remove larger woody stems (up to about three inches in diameter), use a Weed WrenchTM, Root Jack, or Root Talon. These tools, available from several manufacturers, are designed to remove the aboveground portion of the plant as well as the entire root system. It's easiest to undertake this type of control in the spring or early summer when soils are moist and plants come out more easily.

Using tools to remove woody stems.

Volunteers hand pulling invasive plants.

Suffocation

Try suffocating small seedlings and herbaceous plants. Place double or triple layers of thick UV-stabilized plastic sheeting, either clear or black (personally I like clear), over the infestation and secure the plastic with stakes or weights. Make sure the plastic extends at least five feet past the edge of infestation on all sides. Leave the plastic in place for at least two years. This technique will kill everything beneath the plastic—invasive and non-invasive plants alike. Once the plastic is removed, sow a cover crop such as annual rye to prevent new invasions.

Cutting or mowing

This technique is best suited for locations you can visit and treat often. To be effective, you will need to mow or cut infested areas three or four times a year for up to five years. The goal is to interrupt the plant's ability to photosynthesize by removing as much leafy material as possible. Cut the plants at ground level and remove all resulting debris from the site. With this treatment, the infestation may actually appear to get worse at first, so you will need to be as persistent as the invasive plants themselves. Each time you cut the plants back, the root system gets slightly larger, but must also rely on its energy reserves to push up new growth. Eventually, you will exhaust these reserves and the plants will die. This may take many years, so you have to remain committed to this process once you start; otherwise the treatment can backfire, making the problem worse.

CHEMICAL CONTROL METHODS

Herbicides are among the most effective and resource-efficient tools to treat invasive species. Most of the commonly known invasive plants can be treated using only two herbicides—glyphosate (the active ingredient in Roundup™ and Rodeo™) and triclopyr (the active ingredient in Brush-B-Gone™ and Garlon™). Glyphosate is non-selective, meaning it kills everything it contacts. Triclopyr is selective and does not injure monocots (grasses, orchids, lilies, etc.). Please read labels and follow directions precisely for both environmental and personal safety. These are relatively benign herbicides, but improperly used they can still cause both short- and long-term health and environmental problems. Special aquatic formulations are required when working in wetland zones. You are required to have a stateissued pesticide applicator license when applying these chemicals on land you do not own. To learn more about the pesticide regulations in your state, visit or call your state's pesticide control division, usually part of the state's Department of Agriculture. In wetland areas, additional permits are usually required by the Wetlands Protection Act. [See sidebar on page 23.]

Foliar applications

When problems are on a small scale, this type of treatment is usually applied with a backpack sprayer or even a small handheld spray bottle. It is an excellent way to treat large monocultures of herbaceous plants, or to spot-treat individual plants that are difficult to remove mechanically, such as goutweed, swallowwort, or purple loosestrife. It is also an effective treatment for some woody species, such as Japanese barberry, multiflora rose, Japanese honeysuckle, and Oriental bittersweet that grow in dense masses or large numbers over many acres. The herbicide mixture should contain no more than five percent of the active ingredient, but it is important to follow the instructions on the product label. This treatment is most effective when the plants are actively growing, ideally when they are flowering or beginning to form fruit. It has been shown that plants are often more susceptible to this type of treatment if the existing stems are cut off and the regrowth is treated. This is especially true for Japanese knotweed. The target plants should be thoroughly wetted with the herbicide on a day when there is no rain in the forecast for the next 24 to 48 hours.

Cut stem treatments

There are several different types of cut stem treatments, but here we will review only the one most commonly used. All treatments of this type require a higher concentration of the active ingredient than is used in foliar applications. A 25 to 35 percent solution of the active ingredient should be used for cut stem treatments, but read and follow all label instructions. In most cases, the appropriate herbicide is glyphosate, except for Oriental bittersweet, on which triclopyr should be used. This treatment can be used on all woody stems, as well as phragmites and Japanese knotweed.

For woody stems, treatments are most effective when applied in the late summer and autumn—between late August and November. Stems should be cut close to the ground, but not so close that you will lose track of them. Apply herbicide directly to the cut surface as soon as possible after cutting. Delaying the application will reduce the effectiveness of the treatment. The herbicide can be applied with a sponge, paintbrush, or spray bottle.

Cut stem treatment tools.

For phragmites and Japanese knotweed, treatment is the same, but the timing and equipment are different. Plants should be treated anytime from mid-July through September, but the hottest, most humid days of the summer are best

for this method. Cut the stems halfway between two leaf nodes at a comfortable height. Inject (or squirt) herbicide into the exposed hollow stem. All stems in an infestation should be treated. A wash bottle is the most effective application tool, but you can also use an eyedropper, spray bottle, or one of the recently developed high-tech injection systems.

It is helpful to mix a dye in with the herbicide solution. The dye will stain the treated surface and mark the areas that have been treated, preventing unnecessary reapplication. You can buy a specially formulated herbicide dye, or use food coloring or laundry dye.

There is not enough space in this article to describe all the possible ways to control invasive plants. You can find other treatments, along with more details on the above-described methods, and species-specific recommendations on The Nature Conservancy Web site (tncweeds.ucdavis.edu). An upcoming posting on the Invasive Plant Atlas of New England (www.ipane.org) and the New England Wild Flower Society (www.newfs.org) Web sites will also provide further details.

Hollow stem injection tools.

Biological controls—still on the horizon

Biological controls are moving into the forefront of control methodology, but currently the only widely available and applied biocontrol relates to purple loosestrife. More information on purple loosestrife and other biological control projects can be found at www.invasiveplants.net.

DISPOSAL OF INVASIVE PLANTS

Proper disposal of removed invasive plant material is critical to the control process. Leftover plant material can cause new infestations or reinfest the existing project area. There are many appropriate ways to dispose of invasive plant debris. I've listed them here in order of preference.

- **1. Burn it**—Make a brush pile and burn the material following local safety regulations and restrictions, or haul it to your town's landfill and place it in their burn pile.
- **2. Pile it**—Make a pile of the woody debris. This technique will provide shelter for wildlife as well.
- **3.** Compost it—Place all your herbaceous invasive plant debris in a pile and process as compost. Watch the pile closely for resprouts and remove as necessary. Do not use the resulting compost in your garden. The pile is for invasive plants only.

Injecting herbicide into the hollow stem of phragmites.

4. Dry it/cook it—Place woody debris out on your driveway or any asphalt surface and let it dry out for a month. Place herbaceous material in a doubled-up black trash bag and let it cook in the sun for one month. At the end of the month, the material should be non-viable and you can dump it or dispose of it with the trash. The method assumes there is no viable seed mixed in with the removed material.

Care should be taken in the disposal of all invasive plants, but several species need extra attention. These are the ones that have the ability to sprout vigorously from plant fragments and should ideally be burned or dried prior to disposal: Oriental bittersweet, multiflora rose, Japanese honeysuckle, phragmites, and Japanese knotweed.

Christopher Mattrick is the former Senior Conservation Programs Manager for New England Wild Flower Society, where he managed conservation volunteer and invasive and rare plant management programs. Today, Chris and his family work and play in the White Mountains of New Hampshire, where he is the Forest Botanist and Invasive Species Coordinator for the White Mountain National Forest.

Controlling Invasive Plants in Wetlands

Special concerns; special precautions

Control of invasive plants in or around wetlands or bodies of water requires a unique set of considerations. Removal projects in wetland zones can be legal and effective if handled appropriately. In many cases, herbicides may be the least disruptive tools with which to remove invasive plants. You will need a state-issued pesticide license to apply herbicide on someone else's property, but all projects in wetland or aquatic systems fall under the jurisdiction of the Wetlands Protection Act and therefore require a permit. Yes, even hand-pulling that colony of glossy buckthorn plants from your own swampland requires a permit. Getting a permit for legal removal is fairly painless if you plan your project carefully.

- 1. Investigate and understand the required permits and learn how to obtain them. The entity charged with the enforcement of the Wetlands Protection Act varies from state to state. For more information in your state, contact:
 - ME: Department of Environmental Protection www.state.me.us/dep/blwq/docstand/nrpapage.htm
 - NH: Department of Environmental Services www.des.state.nh.us/wetlands/
 - VT: Department of Environmental Conservation www.anr.state.vt.us/dec/waterq/permits/htm/pm_cud.htm
 - MA: Consult your local town conservation commission
 - **RI:** Department of Environmental Management www.dem.ri.gov/programs/benviron/water/permits/fresh/index.htm
 - CT: Consult your local town Inland Wetland and Conservation Commission

- 2. Consult an individual or organization with experience in this area. Firsthand experience in conducting projects in wetland zones and navigating the permitting process is priceless. Most states have wetland scientist societies whose members are experienced in working in wetlands and navigating the regulations affecting them. A simple Web search will reveal the contact point for these societies. Additionally, most environmental consulting firms and some nonprofit organizations have skills in this area.
- 3. Develop a well-written and thorough project plan. You are more likely to be successful in obtaining a permit for your project if you submit a project plan along with your permit application. The plan should include the reasons for the project, your objectives in completing the project, how you plan to reach those objectives, and how you will monitor the outcome.
- 4. Ensure that the herbicides you plan to use are approved for aquatic use. Experts consider most herbicides harmful to water quality or aquatic organisms, but rate some formulations as safe for aquatic use. Do the research and select an approved herbicide, and then closely follow the instructions on the label.
- 5. If you are unsure—research, study, and most of all, ask for help. Follow the rules. The damage caused to aquatic systems by the use of an inappropriate herbicide or the misapplication of an appropriate herbicide not only damages the environment, but also may reduce public support for safe, well-planned projects.

Section 3 Annual Updates and Log Requirements

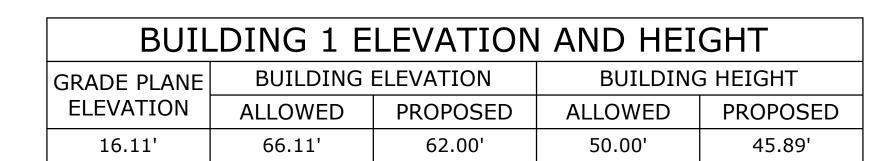

The Owner and/or Contact/Responsible Party shall review this Operation and Maintenance Plan once per year for its effectiveness and adjust the plan and deed as necessary.

A log of all preventative and corrective measures for the stormwater system shall be kept on-site and be made available upon request by any public entity with administrative, health environmental or safety authority over the site including NHDES.

Copies of the Stormwater Maintenance report shall be submitted to the City of Portsmouth on an annual basis.

TECHNICAL REPORT OF WETLAND DELINEATION, CLASSIFICATION & IDENTIFICATION

Ambit Engineering Project No.:3458 Date(s) of Delineation:11/18/22 Date of Report: 11/22/22

Field Delineator: Steven D. Riker Compiled by: Steven D. Riker

Project Location/Tax Map & Lot: 815 Lafayette Road, Portsmouth, NH. Tax Map 245, Lot 3

Prepared for: MB2 Development, Mike Brown, PO Box 372, Portsmouth, NH 03802

Site Area Observed: Entire lot to establish tidal & freshwater wetlands and buffers.

Site Conditions: Lot with uplands adjacent to freshwater and tidal wetlands.

Weather/Seasonal Conditions: 40 sunny, early winter conditions, no snow cover.

Site Disturbance: Historical upland disturbance from existing development.

Wetlands Present: Yes. Property adjacent to freshwater and tidal wetlands.

Wetland conditions/atypical situation/problem area: Wetlands are not considered atypical or a problem area.

Hydric Soil Criterion: A4 & A11. Field Indicators of Hydric Soils in the United States, Version 8.2, USDA-NRCS, 2018.

Delineation Standards Utilized:

- 1. US Army Corps of Engineers Wetlands Delineation Manual, Technical Report Y-87-1 (Jan 1987). AND Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Northcentral and Northeast Region, Version 2.0, January 2012.
- Field Indicators of Hydric Soils in the United States, Version 8.2, USDA-NRCS, 2018 AND (for disturbed sites) Field Indicators for Identifying Hydric Soils in New England, Version 4. NEIWPCC Wetlands Work Group (April 2019).
- 3. National List of Plant Species That Occur in Wetlands: Northeast (Region 1). USFWS (May 1988).

Notes: The tidal wetland associated with the site (Highest Observable Tide Line) would be classified as an estuarine intertidal emergent persistent wetland system that is regularly flooded by the tides (E2EM1N). The freshwater wetlands associated with the site delineate a poorly drained combination palustrine scrub shrub broad-leaved deciduous / palustrine emergent persistent wetland system that is seasonally flooded and or saturated (PSS1E/PEM1E). Please note that the wetlands were survey located immediately following the delineation.

Invasive Species Removal Plan

ADDRESS: 815 Lafayette Road, Portsmouth, NH

PROPERTY: Map 245 Lot 3

OWNER: Prospect North 815, LLC

DATE: October 23, 2023

On October 17, 2023, Tighe & Bond environmental scientists assessed the Project Site at 815 Lafayette Road, Portsmouth NH, for the presence, identification, and relative extent of invasive plant species. An inventory of existing vegetation and dominant plant communities was documented from the western extent of the property, just downstream of the Route 1 Bypass (Lafayette Road) bridge, to the eastern most portion of the property, between the cleared area in the southwest portion of the lot and the broad salt marsh along the northern bank of Sagamore Creek.

The vegetative community in the area assessed is dominated by invasive plant species, including:

- Autumn olive (*Elaeagnus umbellata*)
- Oriental bittersweet (*Celastrus orbicalatus*)
- Common buckthorn (*Rhamnus cathartica*)
- Glossy buckthorn (*Rhamnus frangula*)
- Honeysuckle (Lonicera spp.)
- Multiflora rose (Rosa multiflora)
- Black swallowwort (*Cyanchum louiseae*)
- Common reed (*Phragmites australis*)

Honeysuckle (spp), especially along the western shoreline, forms a dense vegetative layer that is outcompeting native species. There is a gradual transition towards a more forested community that is less heavily infested with invasive species, starting at the western side of the existing building (rear parking lot) and moving easterly. A more mature, native, tree canopy exists in this area relative to the western portion of the property, though the understory is still dominated by invasive species. Oriental bittersweet was observed to be "strangling" several mature trees and, in some cases, had caused the tree(s) to completely topple over.

Effort will be made to protect and retain native, healthy, individual trees and shrubs along the shoreline during planning and design for redevelopment of the site. Select individuals will be field located as planning and design progresses.

The overall area was divided into seven sub-areas based on typical vegetation class (strata) and relative dominance of invasive species. Each area is further described in Section 1 of this memo and depicted in the exhibit titled Invasive Species Inventory Plan which can be found in Appendix A.

1 Existing Invasive Species Inventory Areas

1.1 Area 1

"Area 1" is located at the western extent of the property, along the northern shoreline of Sagamore Creek, just downstream of the Route 1 Bypass (Lafayette Road) bridge. There is an existing stormwater outfall which drains through an approximately 120-foot long swale and discharges into the fringing salt marsh along Sagamore Creek. The swale bottom is approximately six (6)-feet wide, sparsely vegetated, and contains a substantial amount of trash and debris. The swale is bounded by steep, vegetated, banks on either side. Vegetation in this area contains interspersed native species, such as Goldenrod (*Solidago s*pp), Beach plum (*Prunus maritima*), Black Cherry (*Prunus serotina*), Pin Cherry (*Prunus pensylvanica*), Staghorn sumac (*Rhus hirta*), and American pokeweed (*Phytolacca americana*). However, the dominant aerial coverage is comprised of invasive species, including Autumn olive (*Elaeagnus umbellata*), Oriental bittersweet (*Celastrus orbicalatus*), Common buckthorn (*Rhamnus cathartica*), Glossy buckthorn (*Rhamnus frangula*), Honeysuckle (*Lonicera spp.*), Multiflora rose (*Rosa multiflora*) and Coralberry (*Ardisia crenata*).

1.2 Area 2

"Area 2" is the forested area located towards the western extent of the property, east of the stormwater swale, and landward of the upland shrub zone along the shoreline (salt marsh; Area 3). This area contains a primarily forested vegetative community consisting of native trees (Black locust, Pin cherry, White pine (*Pinus strobus*), Northern red oak (*Quercus Rubra*), and Grey birch (*Betula populifolia*)); though it is also overrun with Oriental bittersweet and interspersed with Common and Glossy buckthorn, Honeysuckle (spp), Multiflora rose, and Autumn olive.

1.3 Area 3

"Area 3" is the narrow upland zone fringing along the shoreline, located towards the western extent of the property, between the forested area (Area 2) and the salt marsh. This area primarily consists of Black cherry and Callery pear (*Pyrus calleryana*) shrubs dominated by invasive species (Honeysuckle (spp) and Oriental bittersweet, interspersed with Buckthorn (spp), Autumn olive, and Multiflora rose). Goldenrod and American burnweed (*Erechtites hieraciifolius*) exist in the herbaceous stratum though are not dominant relative to the invasive species present.

Two dominant areas of Common reed (*Phragmites australis*) exist on the landward margin of the salt marsh, along the western shoreline of the property.

1.4 Area 4

"Area 4" is located off the southeast corner of the front parking lot and consists of a dominant stand of Staghorn sumac along the steep drop off to the salt marsh. The Staghorn sumac is interspersed with some Oriental bittersweet and multiflora rose on the narrow shelf before dropping off (seaward) into a dominant stand of Common reed.

1.5 Area 5

"Area 5" is located off the southeast corner of the building, between the southern edge of the rear parking lot and the fringing salt marsh along the outer radius of Sagamore Creek. Area 5 begins a transition zone towards a more forested community, less heavily infested with invasive species. Vegetation in this area consists of Cottonwood (*Populous deltoides*; diseased, dying), Black locust, Grey birch and Northern red oak in the tree stratum; and, Beach plum, Bayberry (*Morella caroliniensis*), and Black cherry in the shrub stratum. These species are mixed with invasives (Callery pear, Honeysuckle (spp), Multiflora rose, Autumn olive, Buckthorn (spp), and Oriental bittersweet).

There is a large white pine near the center of this area that likely provides important habitat value and stability along the bank. Effort should be made to protect and retain it during redevelopment of the site.

1.6 Area 6

"Area 6" encompasses the eastern most portion of the property along the shoreline between the cleared area in the southwest portion of the lot and the broad salt marsh along the northern bank of Sagamore Creek. There is a sharp "corner" along the shoreline bound by a steep slope, clearly defining the edge of the marsh.

This area primarily consists of an upland forested community with a freshwater emergent and scrub-shrub wetland delineated in the northeast corner. A more mature, native, tree canopy exists here (*Populus* spp, Black cherry, Black locust, White pine, Grey birch, White birch, White oak (*Quercus bicolor*), Beach plum, Pin cherry, Red maple (*Acer rubrum*) and Sugar maple (*Acer saccharum*)), relative to the western portion of the property. The understory is still dominated by invasive species; primarily Oriental bittersweet, Buckthorn (spp) and Honeysuckle (spp), interspersed with Multiflora rose and Autumn olive. In several instances, Oriental bittersweet was observed to be "strangling" mature trees and, in some cases, had caused the tree(s) to completely topple over.

1.7 Area 7

"Area 7" is a small patch of Black swallowwort (*Cyanchum louiseae*) on the ground, located just inside the tree line off the western edge of the cleared area in the back of the lot.

2 Invasive Species Removal

As described above, we have identified the dominant invasive plant community within and adjacent to the Project Site. Widespread presence of invasive species has been documented throughout the understory and canopy of the site. These species are targeted for removal to enhance the Sagamore Creek shoreline habitat value. Mechanical removal (pulling and digging) is the proposed strategy.

A detailed inventory of all trees, shrubs and ground cover will be undertaken to demonstrate compliance with the minimum vegetation maintenance standards of the Shoreland Water Quality Protection Act and to field locate native, healthy, individual trees and shrubs along the shoreline that will be protected and retained through redevelopment of the site. The entire restoration area will be cleared of the invasive trees and shrubs, replanted with native species, and monitored and maintained long term to minimize the potential for re-invasion.

2.1 Mechanical Removal: Pulling and Digging

The goal of the mechanical removal method (versus chemical or biological methods) is to physically remove the entire plant, including above-ground material as well as the roots and rhizomes. It is most effective for species that have a tap root or shallow, lateral, root systems that may be easily pulled from the ground, such as Honeysuckle, Buckthorn and Multiflora rose. In this way, the entire plant is removed, and the potential for regrowth within the treatment area is substantially reduced. For many invasive species, such as Glossy Buckthorn, cutting or mowing the above-ground material will only stimulate regrowth and cause an increased density to return in subsequent growing seasons.

100% removal success is rarely achievable in the initial effort. Professional judgment is necessary to determine where and when to prioritize removal effort based on species-specific factors such as rooting structure and reproductive period. This work is typically conducted in the fall and winter, before the ground freezes, or in early spring. Summer work can also be effective, especially when the season is dry and reduced impact to soils is achievable. During the spring and summer months, monitoring and additional hand pulling of newly sprouted material is necessary to maximize removal success and reduce the potential for regrowth the following season.

2.1.1 Initial Removal with Mechanized Equipment or Weed Wrench

Trees and shrubs designated to be removed will be clearly marked in the field prior to commencing work. An arborist will assess the Project Site and identify invasive, dead, and hazardous trees. The trees will be clearly marked by a qualified professional scientist prior to commencing work. Vegetation designated for removal will be cut with machinery or by hand, as necessary, and stockpiled for proper disposal.

A mini excavator will be used to remove the root masses of targeted shrub species. Where access for heavy machinery is necessary for removal of root material, timber mats (or equivalent) will be placed to minimize soil disturbance by dispersing the weight of the equipment over a larger surface area. The stumps of cut trees will be ground to prevent coppicing and re-growth.

2.1.2 Removal of Root Masses and Trailing Roots or Rhizomes

Special attention will be pain when pulling the root masses of invasive shrub species. The use of a mini excavator, as described above, may facilitate the removal of larger root masses. Carefully lifting and shaking the root ball as it is extracted from the soil facilitates the removal of the trailing roots and rhizomes. The soil is then released from the root ball by gentle shaking of the bucket by the machine operator. For smaller individuals and in areas that are inaccessible by machine, work will be completed by hand, with a weed wrench. If root masses are too large for extraction in locations inaccessible by machinery, weed wrenches, chains, straps and "come-alongs" will be lead out to the mini excavator to manually pull the root ball out of the soil.

2.1.3 Hand Clearing and Grubbing of Plant Fragments

Hand clearing and removal of leftover plant material is critical for the success of any invasive species management effort. For some species, such as Oriental Bittersweet, the emergence of new shoots (or "suckers") from remaining root fragments can occur from the crown or along the root itself, if left in place. Qualified field staff will go along with the excavator operator to clear leftover invasive plant material, root fragments and rhizomes by hand.

2.2 Proper Disposal and Final Disposition of Removed Invasive Plant Material

Stockpiled invasive plant material will either be burned during the local brush-burning season or chipped and removed to be composted off site. If work occurs during the burning season there are several advantages to burning the material on site. Firstly, burning on site reduces the cost of transport and off-site disposal. Secondly, the burning of woody material returns valuable nutrients to the soil structure. Wood ash is a beneficial amendment for fields and planting areas as it contains phosphorous and other nutrients, which in many systems are depleted by plant growth and microbial activity. The UNH Cooperative Extension also recommends burning as a preferred method of disposal of woody invasive plants. They advise against burning plants that contain easily airborne seeds, such as Black swallow-wort. Harvested material would be burnt in small, manageable, brush piles to facilitate these benefits to the local ecosystem.

If the work is conducted outside of the local brush-burning season, the harvested material will be chipped on-site and transported to an appropriate off-site composting facility. Entire root balls can be transported to an off-site facility for grinding, chipping and composting. Above-ground plant material may be chipped separately for wood chips to be reused onsite. To the extent possible, this work would be completed on-site to reduce the volume of material that would need to be transported. For woody species that do not propagate vegetatively, chipping the plant material before it develops seeds or flowers renders the plant non-viable, especially once the material has completely dried.

3 Conclusion

In conclusion, the Project Site is substantially dominated by invasive plant species. This invasive community is outcompeting native species, compromising biodiversity and the habitat value along the shoreline of Sagamore Creek. Relative density of invasive species decreases where the vegetation transitions towards a more mature, native, forested community that is less heavily infested towards the eastern extent of the property. However, the understory is still largely dominated by invasive shrubs and woody vines.

In lieu of chemical or biological control methods, these species are targeted for mechanical removal (pulling and digging) to enhance the Sagamore Creek shoreline habitat value. A detailed inventory of all trees, shrubs and ground cover will be undertaken in an effort to protect and retain native, healthy, individual trees and shrubs along the shoreline to the extent possible.

The entire restoration area will be cleared of the invasive trees and shrubs, replanted with native species, and monitored and maintained long term to minimize the potential for reinvasion. Work will be monitored by a qualified scientist on-site to implement best professional judgement in cooperation with equipment operators and to ensure leftover plant fragments are entirely removed. The qualified scientist will return in subsequent growing seasons to assess and adaptively manage the buffer enhancement area to monitor success of native plantings and to minimize recolonization of targeted invasive species.

Community Space: Monitoring and Maintenance Plan

ADDRESS: 815 Lafayette Road, Portsmouth, NH

PROPERTY: Map 245 Lot 3

OWNER: Prospect North 815, LLC

DATE: December 2023

The invasive species removal effort is anticipated to commence during late spring or early summer 2024. This will provide sufficient opportunity during the growing season for final demarcation of vegetation to be removed and to field locate individual native trees and shrubs that will be retained. A summary of the proposed Community Space Long-Term Monitoring and Maintenance Plan is provided in Table 1-1.

Construction Monitoring

The mechanical removal of invasive species (e.g. pulling and digging), completion of the native planting plan, and installation of the wood chip community greenway trail will be monitored by a qualified environmental scientist on-site daily, while work is underway. Invasive species targeted for removal will be identified in the field by the environmental scientist; and, in cooperation with equipment operators, the environmental scientist will work to ensure that the targeted plants are entirely removed, and no viable plant fragments are left behind.

Native species planted to restore the buffer, as described on the approved Landscape Plan and Landscape Schedule and Notes (sheets L-100 and L-101), will also be monitored by the environmental scientist. Pending weather conditions immediately following the replanting effort, the replanted area may need to be watered by an external source.

Erosion and sediment controls will be installed, monitored, and maintained along the edge of work to prevent disturbed soil from migrating into the salt marsh or into Sagamore Creek. Where access with heavy machinery is necessary to reach certain invasive plants, timber mats (or equivalent) will be placed to minimize soil disturbance. Where invasive species removal results in areas of exposed soil, these areas will receive 6-inches of loam and native buffer seed mix with weed-free straw mulch (or equivalent) to stabilize exposed soil and minimize the chance of invasive species reemergence.

Post-construction Monitoring and Maintenance

A qualified environmental scientist will return to the site monthly, for the duration of the first and second growing seasons following completion of the invasive species removal, native planting plan completion, and installation of the community greenway trail. Monthly site inspections will review the project area for re-emergence of invasive species, for the successful establishment of planted native species and seeded areas, and for general stability and erosion and sediment control within the Community Space. Inspections will not occur in winter months, outside of the growing season.

The environmental scientist will bring a hand-weeder to remove any emerging invasive species, taking care to extract all above and below ground plant material. Material will be collected and properly disposed of in a heavy-duty black trash bag. Any necessary field adjustments (e.g., erosion and sediment controls, or watering needs) identified during the

monthly inspections will be immediately communicated to the Project Manager and the property owner.

Long Term Monitoring and Maintenance

The Community Space will be monitored for four additional growing seasons after the initial post-construction monitoring schedule (i.e., five years total, following the invasive species removal, completion of the native planting plan, and installation of the community greenway trail) to capitalize on the chance for long-term success of the buffer restoration effort. During this phase, monitoring will occur at the beginning and at the end of each growing season (e.g., April or May, then October or November).

The environmental scientist will bring a hand-weeder to remove any emerging invasive species, taking care to extract all above and below ground plant material. Material will be collected and properly disposed of in a heavy-duty black trash bag. Any necessary field adjustments identified during the biannual inspections will be immediately communicated to the Project Manager and the property owner.

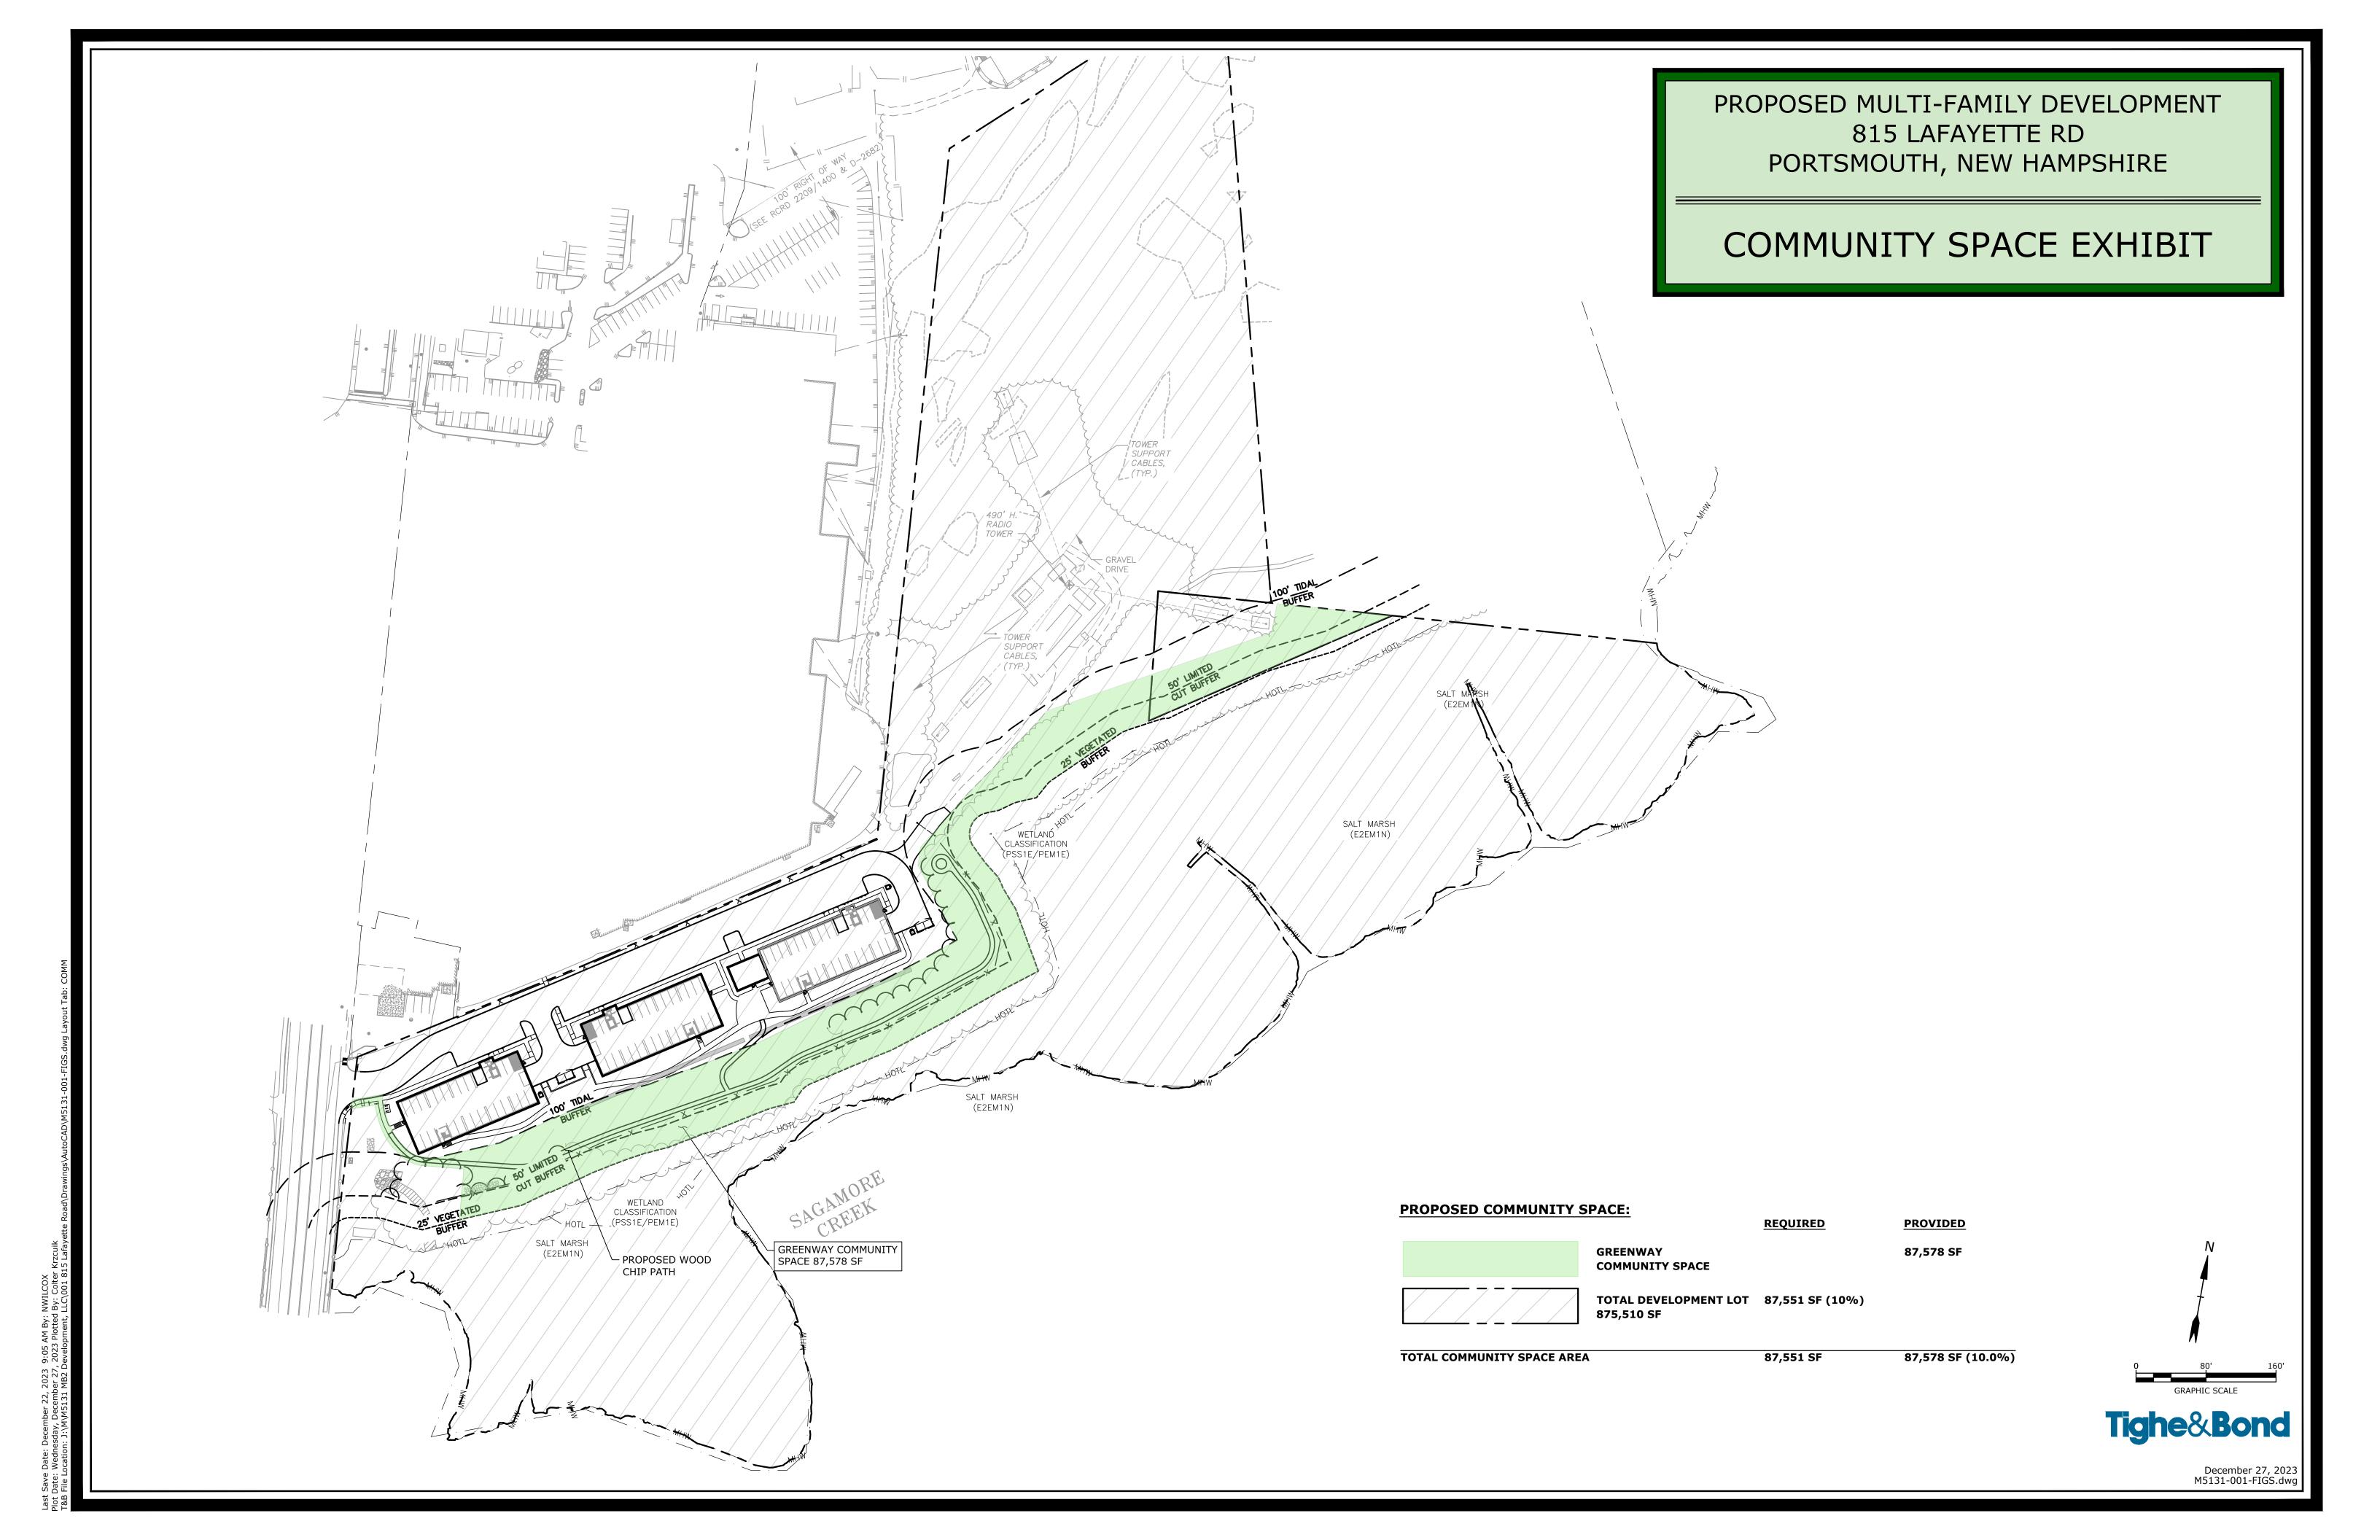

TABLE 1-1Summary of Long-Term Monitoring and Maintenance Schedule

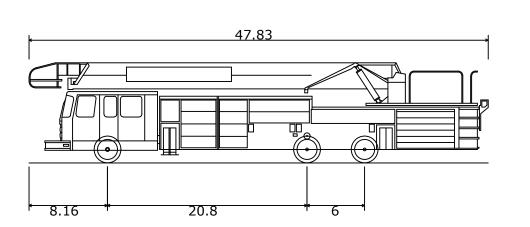

| Year | Growing Season | Frequency of Monitoring | Report Due |
|------|---------------------------------------|----------------------------------------------------|------------------------------|
| 0 | Same season as project implementation | Daily, during construction; Monthly thereafter* | December 31 |
| 1 | 1 | Monthly* | December 31 |
| 2 | 2 | Twice Annually* | December 31 |
| 3 | 3 | Twice Annually* | December 31 |
| 4 | 4 | Twice Annually* | December 31 |
| 5 | 5 | Twice Annually* | Final report: December 31 |

^{*}Monitoring events will occur during the growing season. Monitoring will not occur in winter months, outside of the growing season.

Reporting

On behalf of the property owner, Tighe & Bond environmental scientists will submit annual monitoring reports to the City of Portsmouth Conservation Commission (the Commission). Reports will describe the success of the invasive species removal effort and the establishment of a healthy native riparian buffer, and any maintenance or adjustments made in the field after each monitoring event. Reports will be provided to the Commission by December 31 of each year during the monitoring and maintenance schedule described above.

Section 1 Study Overview

This Traffic Impact Study (TIS) evaluates the potential traffic impact of the proposed residential development located at 815 Lafayette Road, in the City of Portsmouth, New Hampshire. The proposed development includes the demolition of the former WHEB radio station office building and construction of three residential buildings. The site is bounded by Lafayette Plaza to the north, Sagamore Creek to the east and south, and Lafayette Road to the west. Figure 1 shows the Site location relative to the surrounding roadway network.

The project site currently contains the former WHEB radio station building. The project proposes to demolish the existing building and construct 72 residential units located in three separate three-story buildings. The Site will provide 121 total parking spaces including nine accessible spaces. A total of 72 covered spaces will be provided via structured parking on the ground level below each of the buildings, while 49 uncovered spaces will be provided within the adjacent surface lot north of the buildings. Site access will continue to be provided via the existing driveway along Lafayette Road (US Route 1). The project is expected to be completed in 2025.

Based on the analyses conducted, it is the professional opinion of Tighe & Bond that the additional traffic expected to be generated by the proposed residential development is not expected to have a significant impact to traffic operations within the study area.

Section 2 Existing Conditions

The Project site is bounded by Lafayette Plaza to the north, Sagamore Creek to the east and south, and Lafayette Road to the west. The property is currently accessible via a single full-access unsignalized driveway on Lafayette Road. The following sections provide details on the adjacent roadways within the study area.

2.1 Roadways

2.1.1 Lafayette Road (US Route 1)

Lafayette Road (US Route 1) is classified as a principal arterial under NHDOT District 6 jurisdiction. The roadway runs in a north-south direction, providing local and regional connectivity through southeastern New Hampshire, generally running parallel to I-95 between the Massachusetts state line and the Maine state line. Within the study area, Lafayette Road generally provides two travel lanes in each direction with a two-way center turn lane, and northbound and southbound left turn lanes at Mirona Road and Greenleaf Woods Drive. There are driveways to retail developments along both sides of the roadway.

Sidewalks are generally provided along both sides of Lafayette Road in the study area, with crossings located at the two signalized study area intersections at Mirona Road and Greenleaf Woods Drive. A varying shoulder typically 1 to 3 feet wide exists delineated by a solid white edge line. The speed limit is posted at 35 miles per hour (mph) in both directions in the vicinity of the site.

2.2 Study Area Intersections

2.2.1 Lafayette Road (US Route 1) at Mirona Road

Mirona Road intersects Lafayette Road from the east and west to form a four-way signalized intersection. The northbound and southbound approaches provide two through lanes and one dedicated left-turn lane that is separated from opposing traffic by a narrow raised median. The northbound and southbound left-turns operate under a protected signal phase. The eastbound approach provides a shared through/ left-turn lane and exclusive right-turn lane. The westbound approach provides a single all-purpose lane.

Marked crosswalks are provided on the north, east, and west legs with a concurrent pedestrian phase provided. Marked edge lines provide narrow 1-3 foot shoulders on all intersection approaches.

2.2.2 Lafayette Road (US Route 1) at Greenleaf Woods Drive/ Lafayette Plaza North Driveway

Greenleaf Woods Drive and Lafayette Plaza north driveway intersect Lafayette Road from the west and east, respectively, to form a four-way signalized intersection. The northbound and southbound approaches provide two through lanes and one dedicated left-turn lane that is separated from opposing traffic by a narrow raised median. The eastbound approach provides a shared through/ left lane and shared through/ right lane

with a short raised median. The westbound approach provides a shared through/ left and dedicated right-turn lane with a raised median. Marked crosswalks are provided on the north, south, and west legs with a concurrent pedestrian phase provided.

2.2.3 Lafayette Road (US Route 1) at Site Driveway

The site driveway intersects Lafayette Road from the east to form a three-way unsignalized intersection. Two travel lanes are provided in each direction on Lafayette Road with a center turn lane provided at the site driveway. The site driveway provides a single approach lane under stop control. Sidewalks and narrow shoulders are provided in the vicinity of the site driveway.

2.3 Traffic Volumes

Turning movement counts (TMC) were collected at the study area intersections on May 25, 2023 during the weekday morning (7:00 AM to 9:00 AM) and weekday afternoon peak periods (4:00 PM to 6:00 PM). Automatic Traffic Recorder (ATR) counts were collected on Lafayette Road approximately 250 feet south of the site driveway during a 48-hour period from Wednesday (May 24, 2023) thru Thursday (May 25, 2023) concurrently with the TMC to record hourly traffic volumes and vehicular speeds.

Based on current NHDOT guidance, 2023 traffic volumes were compared to 2019 traffic volumes to determine if adjustments to the collected traffic volumes should be made. NHDOT continuous count station No. 02125090, located on Spaulding Turnpike (NH Route 16) one half mile north of the US Route 4 interchange was used as a basis for comparison. The average traffic volumes from Tuesday to Thursday during the same week in May 2019 and May 2023 were used as a basis for the comparison. The review shows May 2023 traffic volumes on Spaulding Turnpike during the week the TMC were collected were 11.1% lower during the weekday morning peak hour, 7.4% higher during the weekday afternoon peak hour, and 2.7% lower on a daily basis as compared to 2019 traffic volumes. Therefore, the May 2023 weekday morning peak hour TMC and May 2023 daily traffic volumes were adjusted upward by 11.1% and 2.7%, respectively. No adjustment was made to the weekday afternoon peak hour.

The adjusted, seasonally adjusted ATR data indicates average daily traffic (ADT) of approximately 16,000 vehicles per day in the northbound direction and 14,000 vehicles per day in the southbound direction. The measured 85th percentile speeds, also known as the operating speed of the roadway, were approximately 45 mph and 43 mph in the northbound and southbound directions, respectively.

The weekday morning and weekday afternoon turning movement counts were each seasonally adjusted to the peak and adjusted as applicable based on the historical volume comparison per NHDOT guidelines. The adjusted 2023 existing traffic volumes for the weekday morning and weekday afternoon peak hours are shown in Figures 2 and 3, respectively. The raw TMC data and ATR data are provided in Appendix A. The NHDOT historical traffic volumes on Spaulding Turnpike, seasonal adjustment factors, and historical growth rates are enclosed in Appendix B. The Traffic Volume Adjustment Factor calculation is provided in Appendix C.

2.4 Capacity and Queue Analyses - Existing Condition

Capacity and queue analyses were performed for the study intersections for the 2023 Existing Conditions during the weekday morning and weekday afternoon peak hours.

Analyses were conducted using Trafficware Synchro Studio 11 software, which conducts the analysis based on *Highway Capacity Manual (HCM)* methodology. Consistent with NHDOT guidelines, analyses for signalized intersections were conducted using methods of the 2000 HCM, while analysis for unsignalized intersections utilized the HCM 6th Edition methodology. The analysis results are categorized in terms of Level of Service (LOS), which describes the qualitative intersection operational conditions based on the calculated average delay per vehicle. A summary of the HCM capacity analysis methodology and a detailed definition of LOS is provided in Appendix D. The queue analysis results are summarized based upon the length of vehicle queueing on an intersection approach. For unsignalized intersections, queues are quantified for 95th percentile (design queues). For signalized intersections, queues are quantified by 95th percentile (design) and 50th percentile (average) queues. Tables 2 and 3 in Section 7 summarize the capacity and queue analyses results, respectively. Capacity analysis worksheets with full inputs, settings, and results are provided in Appendix E.

As shown in Table 2, the majority of the overall intersections and individual intersection approaches operate acceptably at LOS D or better during the peak hours with the exception of the Lafayette Road at Mirona Road southbound left movement which operates at LOS E during the weekday afternoon peak hour. A review of the queuing results in Table 3 shows that all of the design queues are accommodated within available storage between intersections.

2.5 Collision History

Vehicle collision data for the study intersections was requested from the Portsmouth Police Department. However, as of this time, vehicle accident reports were not able to be provided due to staffing shortages.

2.6 Alternative Travel Modes

The study area is in an urban setting in the City of Portsmouth where several multimodal travel options are readily available. The following summarizes the details of various alternative travel modes supported within the study area.

Pedestrian facilities are present throughout the study area. There are existing sidewalks along both sides of Lafayette Road throughout the entire study area. Market crosswalks with concurrent pedestrian phases are present at both signalized study intersections.

The Cooperative Alliance for Seacoast Transportation (COAST) provides transit service within the study area. Bus Route 41 is the primary bus route in the study area with stops along Lafayette Road between Hanover Station to the north and Hillcrest Estimates to the south. An existing bus stop is located approximately a quarter mile north of the site, just north of the intersection with Greenleaf Woods Drive and the Lafayette Plaza north driveway. The route operates from 6:00 AM to 8:49 PM Monday through Saturday. The Route 41 map and schedule are included in Appendix F.

Section 3 No-Build Conditions

The No-Build Condition represents the projection of traffic volumes and operating conditions without the anticipated additional site generated traffic. Consistent with NHDOT guidelines, the study area is analyzed for an Opening Year (2025) and Design Year (2035). This section describes the growth and development considerations included in the 2025 and 2035 No-Build traffic volumes.

3.1 Traffic Growth

To develop the traffic volumes for the 2025 and 2035 No-Build Conditions, the 2023 Existing traffic volumes were grown by one percent per year to represent the general growth of traffic on the study area roadways. This growth rate is consistent with the average growth rate in NHDOT Region E - Southeast, the region in which Portsmouth is located. Background NHDOT growth data is included in Appendix B.

NHDOT and the City of Portsmouth were contacted about other planned/approved developments in the area that may add new traffic to the study area prior to 2025. The following developments were identified:

- 428 US Route 1 Bypass West End Yards Mixed-use Development: The project includes 273 residential units, 22,000 SF of retail/ restaurant space, and 22,000 SF of office space. The project is constructed and occupied except for Parcel D of the project which includes a proposed commercial space. A review of the previous traffic analyses indicates negligible site traffic from the remaining development is anticipated to be added to the study intersections. Therefore, the remaining projected site traffic is assumed to be included in the background traffic volume growth.
- 105 Bartlett Street North Mill Pond Residential Development: The project proposes to construct 152 residential units. The project has been approved and construction is anticipated to begin in Spring 2024. Based on a review of the previous analyses, it was determined that the estimated project trips will not add traffic to the study intersections based on anticipated travel patterns, and therefore was not added to the No-Build traffic volumes.

It is assumed that other smaller developments or small vacancies in existing developments are also captured by the background traffic growth rate. The 2025 and 2035 No-Build traffic volumes for the weekday morning and weekday afternoon peak hours are shown in Figures 4 through 7.

3.2 Capacity and Queue Analyses - No-Build Conditions

Capacity and queue analyses were conducted for the 2025 and 2035 No-Build Conditions traffic volumes for both peak periods using the methodology described in Section 2.4. Tables 2 and 3 in Section 7 summarize the capacity and queue results, respectively. Capacity analysis worksheets with full inputs, settings, and results are provided in Appendix E.

The increase in expected future traffic based on the one percent per year compounded growth rate added to the future No-Build Conditions results in some degradation of operations when compared to existing conditions. In the 2025 No-Build Condition, most overall intersections and individual intersection approaches operate at a similar LOS to the Existing Condition. The 2035 No-Build Condition includes some additional degradation of LOS based on the addition of ten years of compounded annual growth. The following identifies intersections and approaches which predict a degradation of LOS, increased delay or queues exceeding available storage between the 2023 Existing and 2025 No-Build Condition, and/or between the 2025 and 2035 No-Build Condition:

Lafayette Road at Greenleaf Woods Drive/Lafayette Plaza North Driveway:

- The southbound left turn movement degrades from LOS D to LOS E in the 2035 weekday afternoon peak hour.
- The northbound through/right turn movement exceeds the available storage by less than one vehicle length in the 2035 weekday afternoon peak hour.

• Lafayette Road at Mirona Road:

- The northbound left turn movement degrades from LOS D to LOS E in the 2035 weekday morning and afternoon peak hours.
- The southbound left turn movement degrades from LOS D to LOS E in the 2035 weekday morning peak hour and degrades from LOS E to LOS F in the 2025 weekday afternoon peak hour.
- The eastbound shared through/left turn movement degrades from LOS D to LOS E in the 2035 weekday afternoon peak hour.
- o It important to note that while the overall LOS of the intersection degrades and volume-to-capacity ratio nears 1.0 in 2035 during the weekday afternoon due to the increase in traffic volume, the southbound left movement does experience an improvement in LOS from F to D. This improvement is offset by the degradation in LOS on the northbound left and shared eastbound through/ left movements.

It should be noted that in instances where 95th percentile queues slightly exceed available storage, average (50th percentile) queues are well within the available storage for the turn lane, and that the 95th percentile is the queue length that is predicted to be reached only 5 percent of the time, or approximately 3 minutes out of 60 minutes in the affected peak hour.

Section 4 Proposed Conditions

The proposed 72-unit residential development will include three buildings with structured parking on the ground floor of each building and a separate surface parking lot. The proposed development is expected to be complete and occupied in 2025. The Site Plan is presented in Appendix H.

4.1 Site Access

Access to the Site will be provided via the existing full access, unsignalized driveway on the east side of Lafayette Road. The driveway is located approximately 750 feet south of the intersection with Greenleaf Woods Drive. All tenants will utilize this driveway on Lafayette Road to access the site.

Intersection sight distance was reviewed at the proposed site driveway on Lafayette Road, in accordance with criteria set forth in the AASHTO publication *A Policy on the Geometric Design of Highways and Streets*, 7th Edition, 2018. Stopping sight distance was also reviewed along Lafayette Road. Available site distances were estimated based on the site layout plan and available aerial mapping. The 85th percentile speeds were measured to be approximately 45 mph in the northbound direction and 43 mph in the southbound direction on Lafayette Road. A design speed of 45 mph was used as a basis for the analysis.

Based on AASHTO guidelines and the 85^{th} percentile speed of the roadway, the northbound and southbound intersection sight distance requirement is 530 feet for passenger cars and 675 feet for single-unit trucks turning left under *Case B - Left Turn from Stop*. The site driveway provides intersection sight distance in excess of 700 feet in each direction, exceeding the AASHTO requirements for passenger vehicles and single-unit trucks.

Based on AASHTO guidelines, roadway grades, and the 85th percentile speed of the roadway, the stopping sight distance requirement is 360 feet for vehicles traveling in both the northbound and southbound directions. The sight distance provided is in excess of the requirement.

4.2 Trip Generation

Site generated traffic volumes for the proposed residential development were estimated using rates published in the Institute of Transportation Engineers (ITE) Trip Generation, 11th Edition, 2021. The proposed site generated traffic volumes were calculated based on the number of proposed apartments. Trip generation is based on the peak hour of the adjacent street (site). It is estimated that the proposed development may generate a total of 45 trips (11 entering, 34 exiting) during weekday morning peak hour and 52 trips (32 entering, 20 exiting) during weekday afternoon peak hour. The proposed site generated traffic is summarized in Table 1.

TABLE 1Site-Generated Traffic Summary

| Proposed - 72 Apartments | LUC 220 | | |
|--------------------------|---------|------|-------|
| Peak Hour Period | Enter | Exit | Total |
| Weekday Morning | 11 | 34 | 45 |
| Weekday Afternoon | 32 | 20 | 52 |
| Weekday | 268 | 269 | 537 |

Source: Institute of Transportation Engineers, Trip Generation, 11th Edition, 2021 Land Use - 220 [Multifamily Housing (Low-Rise)]

4.3 Arrival and Departure Distribution

The distribution of the proposed site-generated traffic entering and exiting the Site was applied to the roadway network based on existing traffic patterns within the study area as well as a review of US Census Journey-to-Work data which is included in Appendix G. The following arrival/departure distributions are anticipated:

- 30% North to/from US Route 1
- 25% South to/from US Route 1
- 20% North to/from NH Route 4
- 15% South to/from I-95
- 5% North to/from I-95
- 5% West to/from Route 33

Figure 8 presents the arrival and departure distributions of the traffic through the study area by intersection movement. Figures 9 and 10 show the proposed site generated traffic distributed to the study area roadways for the morning and afternoon peak periods, respectively.

4.4 Off-Site Mitigation Review

Right and left turn bay analyses were conducted to determine the potential need for turning bays at the site driveway based on guidance outlined in National Cooperative Highway Research Program (NCHRP) Report 457, Evaluating Intersection Improvements: An Engineering Study Guide. Figures 2-5 and Figure 2-6 provide guidance for left and right turn bay warrants, respectively. Based on the 85th percentile speeds and projected 2035 Build Condition traffic volumes, a northbound right turn bay is not warranted. The analysis does indicate that a southbound left turn bay is warranted. However, due to the presence of the existing center turn lane, a dedicated left turn lane is not recommended as site traffic turning into the site can utilize the existing center turn lane for left turns. It is not recommended to modify the existing striping to maintain cross section continuity along the corridor. The turn bay analyses calculation and results are included in Appendix I.

Section 5 Build Conditions

The anticipated site generated traffic volumes associated with the proposed development were added to the 2025 and 2035 No-Build Conditions traffic volumes to develop the 2025 and 2035 Build Conditions traffic volumes, which are presented in Figure 11 through 14 for both peak periods.

5.1 Capacity and Queue Analyses - Build Condition

Capacity and queue analyses were conducted for the 2025 and 2035 Build Conditions for the peak hours using the methodology described in Section 2.4. Tables 2 and 3 in Section 7 summarize the capacity and queue results, respectively. Capacity analysis worksheets with full inputs, settings, and results are provided in Appendix E.

A majority of the study area intersections and individual intersection approaches continue to operate at acceptable LOS D or better during the peak hours in the 2025 and 2035 Build Conditions. Study area intersections that were identified in Section 2.4 and 3.3 to operate at LOS E or LOS F in the No-Build Conditions continue to operate at the same LOS under Build Conditions. The signalized intersection movements experience queue increases of no more than one car length.

The 815 Lafayette Road Development site driveway approach (unsignalized) operates at LOS D in 2025 and LOS E in 2035 during the weekday morning and afternoon peak hours. Queues of less than one vehicle are expected on the driveway approach.

Section 6 Conclusions & Recommendations

- 1. The project proposes to demolish the existing building (former WHEB radio station) on site and construct a 72-unit residential development comprised of three separate buildings. The project includes approximately 121 parking spaces in both structured parking on the ground level of each building and a surface lot. The development is expected to be complete and occupied in 2025.
- 2. Access to the site will be provided via the existing full access driveway. The site driveway will continue to operate under stop control.
- 3. Based on the ITE data, the project is expected to generate 45 trips during the weekday morning peak hour (11 entering, 34 exiting) and 52 trips during the weekday afternoon peak hour (32 entering, 20 exiting).
- 4. The project proposes internal sidewalk connections to the existing sidewalk network along Lafayette Road, promoting connections to the existing sidewalk network along study area roadways.
- Consistent with NHDOT guidelines, existing traffic volumes have been seasonally adjusted to the peak month condition and adjusted as necessary based on a comparison between 2023 and 2019 continuous count station data to represent a pre-pandemic condition.
- The capacity analyses show that the study area intersections will continue to operate
 at the same LOS under Build Conditions as compared to the No-Build Conditions for
 both the 2025 opening year and 2035 design year with minimal increases in delay or
 queues.
- 7. Based on the left and right turn bay analysis, it was determined that a southbound left-turn bay is warranted. However, the existing center turn lane can accommodate southbound left-turn traffic. Restriping the roadway to provide a directional southbound left-turn lane is not recommended in order to maintain roadway cross section continuity along the corridor.
- 8. Based on the results of the foregoing analysis, it is the professional opinion of Tighe & Bond that the addition of site-generated traffic is expected to have a negligible effect on traffic operations within the study area.

Section 7 Tables

APPENDIX D
Capacity Analysis Methodology

TECHNICAL MEMORANDUM Tighe&Bond

CAPACITY ANALYSIS METHODOLOGY

A primary result of capacity analysis is the assignment of levels of service to traffic facilities under various traffic flow conditions. The capacity analysis methodology is based on the concepts and procedures in the *Highway Capacity Manual* (HCM).¹ The concept of level of service (LOS) is defined as a qualitative measure describing operational conditions within a traffic stream and their perception by motorists and/or passengers. A level-of-service definition provides an index to quality of traffic flow in terms of such factors as speed, travel time, freedom to maneuver, traffic interruptions, comfort, convenience, and safety.

Six levels of service are defined for each type of facility. They are given letter designations from A to F, with LOS A representing the best operating conditions and LOS F the worst. Since the level of service of a traffic facility is a function of the traffic flows placed upon it, such a facility may operate at a wide range of levels of service, depending on the time of day, day of week, or period of year. A description of the operating condition under each level of service is provided below:

- LOS A describes conditions with little to no delay to motorists.
- LOS B represents a desirable level with relatively low delay to motorists.
- LOS C describes conditions with average delays to motorists.
- LOS D describes operations where the influence of congestion becomes more noticeable. Delays are still within an acceptable range.
- LOS E represents operating conditions with high delay values. This level is considered by many agencies to be the limit of acceptable delay.
- LOS F is considered to be unacceptable to most drivers with high delay values that often occur, when arrival flow rates exceed the capacity of the intersection.

Signalized Intersections

Levels of service for signalized intersections are also calculated using the operational analysis methodology of the HCM. The methodology for signalized intersections assesses the effects of signal type, timing, phasing, and progression; vehicle mix; and geometrics on average *control* delay. Control delay is used to establish the operating characteristics for an intersection or an approach to an intersection. Volume-to-capacity (v/c) ratios are also used to help signify the utilization of a lane group's capacity at an intersection. A v/c ratio of ≥ 1.00 represents conditions when the traffic signal cycle capacity is fully utilized and indicates a capacity failure. The level-of-service criteria for signalized intersections are shown in Table A-1.

¹Highway Capacity Manual, 6^{TH} Edition: A Guide for Multimodal Mobility Analysis. Washington, D.C.: Transportation Research Board, 2016.

TECHNICAL MEMORANDUM Tighe&Bond

Unsignalized Intersections

Levels of service for unsignalized intersections are calculated using the operational analysis methodology of the HCM. The procedure accounts for lane configuration on both the minor and major street approaches, conflicting traffic stream volumes, and the type of intersection control (STOP, YIELD, or all-way STOP control). The definition of level of service for unsignalized intersections is a function of average *control* delay. Control delay at an unsignalized intersection is defined as the total elapsed time from when a vehicle stops at the end of the queue until the vehicle departs from the stop line. This time includes the time required for the vehicle to travel from the last-in-queue position to the first-in-queue position.

Volume-to-capacity (v/c) ratios are also used to help signify the utilization of a movement's capacity at an intersection. A v/c ratio of ≥ 1.00 represents conditions when the movement is fully utilized and indicates a capacity failure. The capacity of the movements is based on the distribution of gaps in the major street traffic stream, the selection of gaps to complete the desired movement, and the follow-up headways for each driver in the queue. When an unsignalized intersection is located within 0.25 miles of a signalized intersection, traffic flows may not be random and some platoon structure may exist, thereby affecting the minor street operations. The level-of-service criteria for unsignalized intersections are shown in Table A-1.

TABLE A-1Level-of-Service Criteria for Intersections

| 1 1 | Signalized Intersection Criteria | Unsignalized Intersection Criteria | |
|---------------------|---------------------------------------------|---------------------------------------------|------------------|
| Level of Service | Average Control Delay (Seconds per Vehicle) | Average Control Delay (Seconds per Vehicle) | V/C Ratio >1.00a |
| Α | ≤10 | ≤10 | F |
| В | >10 and ≤20 | >10 and ≤15 | F |
| С | >20 and ≤35 | >15 and ≤25 | F |
| D | >35 and ≤55 | >25 and ≤35 | F |
| E | >55 and ≤80 | >35 and ≤50 | F |
| F | >80 | >50 | F |

Note: ^aFor approach-based and intersection-wide assessments, LOS is defined solely by control delay.

Source: Highway Capacity Manual, 6th Edition: A Guide for Multimodal Mobility Analysis. Washington, D.C.: Transportation Research Board, 2016. Exhibit 19-8, Pg. 19-16.

For signalized intersections, this delay criterion may be applied in assigning level-of-service designations to individual lane groups, to individual intersection approaches, or to the entire intersection. For unsignalized intersections, this delay criterion may be applied in assigning level-of-service designations to individual lane groups on the minor street approaches or to the left turns from the major street approaches.

COAST Bus Schedule & Map

COAST BUS FARES

Base Cash Fare

\$1.50

All passengers ages 5 and up are required to pay this fare each time they board a COAST bus.

\$ 0.75 Half-Fare

Passengers 65 and older, or passengers with a disability are entitled to pay half the cash fare. Proof of eligibility is required by showing a Medicare card, photo ID with birth date, COAST ADA Paratransit Card, or COAST Half-Fare Card. Please contact COAST to apply for a Half-Fare Card.

Multi-Ride Tickets and Passes

Available at www.coastbus.org or call 603-743-5777, TTY 711.

Unlimited Monthly Pass

\$ 52

Unlimited rides on COAST Routes for the month.

YOUR RIGHTS

COAST adheres to all Federal regulations regarding Civil Rights. If you need to request an ADA Reasonable Modification/ Accommodation, or if you believe you have been discriminated against or would like to file a complaint under the ADA or Title VI, please contact COAST's Civil Rights Officer at 603-516-0788, TTY 711 or email CivilRights@coastbus.org.

NO SERVICE DAYS

COAST does not operate on the following holidays:

- · New Year's Day
- · Labor Day
- Martin Luther King Jr./ Civil Rights Day
- · Thanksgiving Day
- · Memorial Day
- · Christmas Eve Day
- · Christmas Day
- · Independence Day

42 Sumner Drive • Dover, NH 03820 603-743-5777 • TTY 711 • www.coastbus.org

How to Read the Schedule

Printed bus schedules only show the timepoints (major bus stops where the bus will hold until the scheduled departure time). In between those timepoints are many other stops that you can use. For a full listing of bus stops, visit www.coastbus.org, or use the Passio GO! App.

The times shown represent the number of minutes after the hour that the bus will depart from that stop. Last stop times are arrivals. Any exceptions will be noted.

| OUTBOUND (M-Sat) | Service On Every Hour | | | | |
|--------------------------------------------------------|-----------------------|----------------------|-------------|--|--|
| Hanover Station - Lafayette Rd. (Hillcrest Estates) | First Bus | Minutes Past Hour | Last Bus | | |
| Hanover Station | 6:00am | :00 | 8:00pm | | |
| Lafayette Rd. (Cross Roads House) | 6:10am | :10 | 8:10pm | | |
| Lafayette Rd. (Walmart) | 6:20am | :20 | 8:20pm | | |
| Lafayette Rd. (Hillcrest Estates) | 6:29am | :29 | 8:29pm | | |

| INBOUND (M-Sat) | Service On Every Hour | | | |
|--------------------------------------------------------|-----------------------|----------------------|-------------|--|

Prospect North 815 LLC

RE: Natural Gas Availability to 815 Lafayette Rd Portsmouth NH

Dear Mike,

Unitil's natural gas division has reviewed the requested site for natural gas service.

Unitil hereby confirms natural gas service will be available to the 815 Lafayette Rd Portsmouth Project to serve three new residential 24 unit buildings.

Installation is pending an authorized installation agreement with Prospect North 815 LLC and street opening approval from the City of Portsmouth DPW.

Let me know if you have any questions. You can email me at oliver@unitil.com. My phone number is 603-294-5174.

Sincerely,

Janet Oliver Senior Business Development Representative

Green Energy Statement for 815 Lafayette Road, Portsmouth NH

Exterior Wall Systems: The exterior walls will meet or exceed the 2018 IECC standards for energy efficient design with any applicable State of New Hampshire and/or City of Portsmouth Amendments. The ground level walls are proposed to be constructed using Insulated Concrete Forms (ICF), All exterior walls enclosing conditioned spaces on the upper floors will be wood framed with insulation in the stud cavity and at all the rim joists. The exterior cladding materials will a combination of vinyl cladding over a continuous water and air infiltration resistive barrier system.

Window Systems: All windows systems in the project will meet or exceed the 2018 IECC standards with any applicable State of New Hampshire and/or City of Portsmouth Amendments. for u-value, shading coefficient and solar heat gain including high-performance, low-e glazing.

Roofing Systems: the roofing system in the project will consist of a roof membrane over continuous sloped insulation above the roof deck. Insulation value will meet or exceed the 2018 IECC standards with any applicable State of New Hampshire and/or City of Portsmouth Amendments. Slopes will direct water to interior roof drains to be managed in the site drainage.

HVAC Systems: The dwelling units will be provided with individualized heating and cooling units. Systems may include electric heat pumps and energy recovery ventilation units with EnergyStar electric domestic hot water heaters. The enclosed parking areas will be minimally heat using either gas fired unit heaters or a radiant heated slab with gas fired boiler. A heated slab will be continuously insulated to meet or exceed the 2018 IECC standards for energy efficient design with any applicable State of New Hampshire and/or City of Portsmouth Amendments.

Plumbing Systems: All plumbing fixtures in the project will be low-flow fixtures. Dwelling units will have individual EnergyStar rated hot water heaters.

Lighting Systems: All permanent interior light fixtures will use LED lamping.

Appliances: All appliances provided with the project will be EnergyStar rated.

City of Portsmouth, New Hampshire Site Plan Application Checklist

This site plan application checklist is a tool designed to assist the applicant in the planning process and for preparing the application for Planning Board review. The checklist is required to be completed and uploaded to the Site Plan application in the City's online permitting system. A preapplication conference with a member of the planning department is strongly encouraged as additional project information may be required depending on the size and scope. The applicant is cautioned that this checklist is only a guide and is not intended to be a complete list of all site plan review requirements. Please refer to the Site Plan review regulations for full details.

Applicant Responsibilities (Section 2.5.2): Applicable fees are due upon application submittal along with required attachments. The application shall be complete as submitted and provide adequate information for evaluation of the proposed site development. <u>Waiver requests must be submitted in writing with appropriate justification</u>.

Access and Circulation: (2.5.4.3C) Location/width of access ways within site; Location of curbing, right of ways, edge of pavement and sidewalks; Location, type, size and design of traffic signing (pavement markings); Names/layout of existing abutting streets; Driveway curb cuts for abutting prop. and public roads; If subdivision; Names of all roads, right of way lines and easements noted; AASHTO truck turning templates, description of minimum vehicle allowed being a WB-50 (unless otherwise approved by TAC). | Site Plan Sheets C-102 & C-102.1 | | | | |
| Ø | 4. Parking and Loading: (2.5.4.3D) Location of off street parking/loading areas, landscaped areas/buffers; Parking Calculations (# required and the # provided). | Site Plan Sheets C-102 & C-102.1 | | | | |
| \square | 5. Water Infrastructure: (2.5.4.3E) Size, type and location of water mains, shut-offs, hydrants & Engineering data; Location of wells and monitoring wells (include protective radii). | Utilities Plan Sheet C-104 | | | | |
| \square | Sewer Infrastructure: (2.5.4.3F) Size, type and location of sanitary sewage facilities & Engineering data, including any onsite temporary facilities during construction period. | Utilities Plan Sheet C-104 | | | | |

| | 7. Utilities: (2.5.4.3G) The size, type and location of all above & below ground utilities; Size type and location of generator pads, transformers and other fixtures. | Utilities Plan Sheet C-104 | |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------|--|
| \square | 8. Solid Waste Facilities: (2.5.4.3H) | | |
| | The size, type and location of solid waste facilities. | Site Plan Sheet C-102.1 | |
| | 9. Storm water Management: (2.5.4.31) The location, elevation and layout of all storm-water drainage. The location of onsite snow storage areas and/or proposed off-site snow removal provisions. Location and containment measures for any salt storage facilities Location of proposed temporary and permanent material storage locations and distance from wetlands, water bodies, and stormwater structures. | Grading and Drainage Plan Sheet C-103 | |
| Ø | Outdoor Lighting: (2.5.4.3J) Type and placement of all lighting (exterior of building, parking lot and any other areas of the site) and photometric plan. | Photometrics Plan | |
| Ø | Indicate where dark sky friendly lighting measures have been implemented. (10.1) | Photometrics Plan | |
| | 12. Landscaping: (2.5.4.3K) Identify all undisturbed area, existing vegetation and that which is to be retained; Location of any irrigation system and water source. | Landscape Plan Sheet C-105 | |
| | 13. Contours and Elevation: (2.5.4.3L) Existing/Proposed contours (2 foot minimum) and finished grade elevations. | Grading and Drainage Plan Sheet C-103 | |
| Ø | 14. Open Space: (2.5.4.3M) Type, extent and location of all existing/proposed open space. | Site Plan Sheet C-102 | |
| \square | 15. All easements, deed restrictions and non-public rights of ways. (2.5.4.3N) | Existing Conditions Plan Sheets | |
| Ø | 16. Character/Civic District (All following information shall be included): (2.5.4.3P) Applicable Building Height (10.5A21.20 & 10.5A43.30); Applicable Special Requirements (10.5A21.30); Proposed building form/type (10.5A43); Proposed community space (10.5A46). | Site Plan Sheet C-102 | |
| Ø | 17. Special Flood Hazard Areas (2.5.4.3Q) The proposed development is consistent with the need to minimize flood damage; All public utilities and facilities are located and construction to minimize or eliminate flood damage; Adequate drainage is provided so as to reduce exposure to flood hazards. | Existing Conditions Plan Sheets | |

| | Other Required Information | | | | | | |
|---|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------|---------------------|--|--|--|--|
| Ø | Required Items for Submittal | Item Location (e.g. Page/line or Plan Sheet/Note #) | Waiver Requested | | | | |
| Ø | Traffic Impact Study or Trip Generation Report, as required. (3.2.1-2) | Enclosed | | | | | |
| Ø | Indicate where Low Impact Development Design practices have been incorporated. (7.1) | Grading and Drainage Plan Sheet C-103 | | | | | |
| V | Indicate whether the proposed development is located in a wellhead protection or aquifer protection area. Such determination shall be approved by the Director of the Dept. of Public Works. (7.3.1) | N/A | | | | | |
| Ø | Stormwater Management and Erosion Control Plan. (7.4) | Enclosed | | | | | |

|----------------|-------------------------------------------------------|-----------------------|----------------|--------------|
| Applicant: | Prospect North 815, LLC | | | |
| All developm | ent | | | |
| Base fee \$600 | 0 | | | \$600.00 |
| Plus \$5.00 pe | r \$1,000 of site costs Site costs | \$450,000 | | + \$2,250.00 |
| Plus \$10.00 p | er 1,000 S.F. of site develo Site development area | pment area 174,192 | S.F. | + \$1,741.92 |
| | | | Fee | \$4,591.92 |
| Maximum fee | e: \$20,000.00 | | | |
| Fee received | by: | | Da | te: |

Note: Initial application fee may be based on the applicant's estimates of site costs and site development area. Following site plan approval, the application fee will be recalculated based on the approved site plan and site engineer's corresponding site cost estimate as approved by the Department of Public Works, and any additional fee shall be paid prior to the issuance of a building permit.

Owner/Agent Letter of Authorization

This letter is to authorize <u>Tighe & Bond, Inc.</u> (Civil Engineer), to represent and submit on behalf of <u>Prospect North 815, LLC</u> (Owner/Applicant), applications and materials in all site design and permitting matters for the proposed development project located at 815 Lafayette Road in Portsmouth, New Hampshire on parcel of land identified as Map 245 Lot 3. This project includes the construction of multifamily buildings, an office building, and associated on-site improvements. This authorization shall relate to those activities that are required for local, state and federal permitting for the above project and include any required signatures for those applications.
