RE: Planning Board Submission for Wetland CUP Submission & Rev 6 Plans
325 Little Harbor Road, Portsmouth, NH – Tax Map 205 Lot 2
Project #47099.01

Dear Mr. Chellman:

On behalf of our client, ADL 325 Little Harbor Road Trust, please find updated plans, including revised utility design as part of the **Wetland Conditional Use Permit (CUP)** submission relative to the above-referenced project. The following materials have been submitted via ViewPoint and hard copies are also included in this submission:

- **Client Authorization Letter (1 copy);**
- **Portsmouth Wetland CUP Application, Marked Up on February 23, 2022 (Current) (1 copy);**
- **Land Management Plan (1 copy);**
- **History of the Proposed Residential Project to TAC, from Hoefle, Phenix, Gormley & Roberts, PLLC Attorneys at Law, dated April 1, 2022 (1 copy);**
- **Draft Access Easement for Water Services (Granted to City of Portsmouth for Utility Access for Leak Detection and Metering) (1 copy);**
- **MEP Letter of Intent (1 copy); and**
- **Site Development Plans entitled "Site Development Plans, Tax Map 205 Lot 2, Lady Isle Site Renovations, 325 Little Harbor Road, Portsmouth New Hampshire", prepared by TFMoran, Inc., dated September 29, 2021, revised April 4, 2022 (1 copy at 22"x34").**

Although TAC review is not required for Single Family Residential Homes, the client agreed to attend TAC, at the request of the Planning Department and DPW, to provide further details of the proposed utilities. The project was approved at the April 5th TAC meeting.

On April 4th, TAC provides comments which were addressed in TFM's Revision 6 plan set. For the record, we have provided TAC's comments along with our responses, which are shown in ***bold italics***. The following comments were resolved during the April 5th TAC Meeting:

TAC REVIEW COMMENTS:

1. Item to be addressed before Planning Board submittal: Sewer force main has more than one high point. Should be designed and stamped by design engineer. Plan to accommodate high points and air relief.

   Typical with most force main designs, similar to the Sagamore Avenue Sewer Extension Project, EOne's representative F.R. Mahoney and Associates assisted with the sizing of the pipe and pump and provided EOne's design guidance. It is the civil engineer's responsibility to locate the force main horizontally and vertically, locate cleanout and air release manhole locations, provide details, sewer profiles, etc. TFM has provided this information within the plan set, which have been stamped by a Professional Engineer.

   EOne's normal recommendation for air release valves are at peak of 25 feet or more (regardless of dips less than 25 feet) and/or at intervals of 2,000 FT to 2,500 FT. TFM's force main design is just over 3,000 FT long, and originally only included one air release valve within Belle Isle Road's private driveway. The location met the spacing requirement, in between SMH-5 and SMH-6 and were no further from 2,500 SF from either manhole. Additionally, the air release met the vertical spacing requirements, located at least 25 feet in height between SMH-5 and SMH-6.

   Regardless, an additional two valves have been provided to relieve DPW's concern and provide a conservative design. The total proposed air release valves are three. The additional valves are just after the bridge and one within a relative high point within Little Harbor Road.

2. Items to be addressed before construction: Confirm high points in force main does not require air release valve for air entrapment.

   Please refer to the response above.

Project Description

The project includes the replacement of a single-family residence on 325 Little Harbor Road. The existing property is approximately 12.3 acres and currently contains a 2-story house, guest cottage, carriage house, barn, horse barn, horse paddock, shed, and paved driveway. The site is an island within the Rural Zoning District and surrounded by the Piscataqua River. A portion of the development is located within the 100' Tidal Wetland Buffer.

The purpose of this proposal is to demolish the existing house, carriage house, and paddock and to construct a 2-story single-family home, garage, pool, pool cabana, playground, and utility connections via Little Harbor Road; renovate an existing barn and guest cottage; and replace an existing shed and barn with a new shed and barn. The project proposes a total 34,700 SF of impervious area (7%) upon the island within the Highest Observable Tide line. Associated improvements include and are not limited to access (primarily permeable pavers), grading, stormwater management, utilities, and landscaping.

On the mainland side of the bridge, along the Belle Isle Road driveway easement, the intent is to simply install underground utilities and repave the driveway. This will not cause any impacts to woodland area nor increase in impervious area.

The **Total Tidal Wetland Buffer Area is 389,213 SF** within the island and driveway easement. Within this area, the total proposed **disturbance within the Tidal Wetland Buffer Area is 195,656 SF** (58% of Tidal Wetland Buffer Area). The **Temporary Tidal Wetland Impact is 17,189 SF**, primarily required to provide access for construction for suspending utilities from the existing bridge. This impact is also to allow for temporary access beneath the bridge for construction. These calculations are best depicted on Sheet C-04 "Wetland Conditional Use Permit Plan".

All proposed landscape areas propose native vegetation within the Buffer. The combined woodland, lawn, landscaped, and permeable area accounts for 92% of the island's Buffer Area, permitting approximately 8% of the Buffer as impervious. **On the entire island, the project includes a net removal of 16,671 SF of impervious surfaces**, also resulting in a net loss of impervious surface within a jurisdictional wetland buffer. There is also no increase of impervious surface on the entire Lady Isle Road driveway side for the repaving.

Utility Design

The existing utilities serving the residential island include water from Little Harbor Road via the Belle Isle Road, septic system, and overhead electric from Pleasant Point to the island. The intent is to remove the existing water, which is undersized for the proposed improvements and freezes due to improper insulation and burial depth. The septic system will be decommissioned and removed. Pending coordination with Eversource, the overhead electric utilities may be removed via Pleasant Point and replaced with underground.

All proposed utilities will be located along the existing driveway easement of Belle Isle Road. The utilities will conform to Portsmouth DPW and state standards. Gas and sewer are available in Sagamore Avenue and other utilities are available within Little Harbor Road.

Additionally, as recommended by the Conservation Commission during their original November 2021 approval, our team has been exploring the use of geothermal energy. This would be paired with solar energy. The area considered for solar panels is within the previously disturbed horse paddock area, which is a grassed and meadow area. The proposed solar panels will be entirely outside the 100' Wetland Buffer and 150' Natural Woodland Buffer. No trees are expected to require removal beyond what is show on the plan. There is an ongoing solar study and cost-benefit analysis to determine if the geothermal energy and solar panels are feasible to provide supplemental energy needs. Further permitting would be obtained, as necessary, however it is outside of the jurisdictional wetland buffer.

Basis for Wetland CUP Approval

In accordance with section 10.1017.50, Criteria For Approval, we've addressed the six (6) criteria as follows:

> **(1)** The proposed residential improvements are zoned for single family use and reasonably suited for the island. The proposed alteration is within a previously disturbed area and preserves almost half of the island as woodlands. Consider that other possible uses are Open Space PUD's, assisted living, residential care, daycares, or other less preferable uses per Zoning. These uses would likely require larger footprints and human activity that may disturb wildlife. Unlike these for-

profit uses, the homeowners are stewards of the land. At their own expense and decision, they have provided enhanced landscaping, beyond the requirements of Zoning. Additionally, beyond requirements, they have provided a Land Management Plan to control invasive species and restore native plants. The landscaping has been designed to promote wildlife habitat and healthier ecosystem.

(2) & (5) Alternative locations for the development have been considered in previous years. In a previous layout, the design was primarily outside of the 100' Wetland Buffer, which is the western, wooded side of the island. While this design limited impact to the wetland buffer, it required removal of the upland wooded area. It was the Conservation Commission's opinion that development should maintain the majority of the woods on the island and be located within previously disturbed areas, as it is now proposed. The design is intended to provide the least adverse impact to areas and environment within the 100' Wetland Buffer.

(3) & (4) Most of the impact area is to convert areas from pavement and lawn, to open space, such as landscape areas or drought-tolerant meadows, with the goal of establishing more vegetation. Alterations of woodland will occur only to the extent necessary to achieve construction goals.

The project does not propose any permanent wetland impacts, only Tidal Wetland Buffer Impacts within previous development. Temporary wetland impacts are proposed within the Tidal Flats of the Piscataqua River for construction access related to the bridge.

The island will benefit from an overall reduction in impervious area, increased natural vegetation, and improved groundwater infiltration through stormwater infiltration practices. No adverse impact on the wetland functional values of the site or surrounding properties are proposed.

(6) Areas on the western half of the island within the vegetated buffer strip are natural woodland and will remain this way. Areas on the eastern half of the island within the vegetated buffer strip are primarily lawn. Much of this area will be converted from lawn to landscape areas and/or a vegetated meadow. A significant portion of the Buffer will be restored to natural vegetation, particularly along the water line and the seawall.

Project History & City and State Permit and Approval Status

As explain in the the attached letter from HPGR Attorney's at Law and quoted here: *This project has been pending since August 2017, when ADL first applied for a CUP to replace the existing home and renovate/construct associated residential structures on the Property. That CUP received full Planning Board and Conservation Commission review at the time and was approved shortly thereafter on September 25, 2017. The proposal also received NHDES Wetland and Shoreland permitting approval in February 2018. Construction of the project lapsed, as a result of the untimely death of ADL's general contractor at the time.*

Planning Board Submission for Wetland CUP Submission & Rev 6 Plans **April 7, 2022**
325 Little Harbor Road, Portsmouth, NH – Tax Map 205 Lot 2

On September 29, 2021, ADL applied for a new CUP for a modified design in a new location on the Property. ADL met with the Planning Board and Conservation Commission in November 2021. The proposal received a favorable recommendation from the Conservation Commission for the modified project and was originally scheduled for the December 16, 2021 Planning Board meeting.

Shortly prior to the December Planning Board hearing, however, City staff requested that the project be reviewed by TAC due to complexities related to utilities. ADL voluntarily agreed to review despite the fact that TAC is not required for residential projects such as ADL's pending proposal.

Since the continuance of the originally scheduled December 2021 Planning Board meeting, our team has obtained TAC approval and Conservation Commission favorable recommendation. TFM has already obtained a NHDES AoT Permit and are seeking amendments for NHDES Shoreland and Wetland permits. TFM has also submitted to DPW and NHDES Wastewater for sewer permits. Additionally, we have received Planning Board DADU CUP approval for the Guest Cottage in February 2022.

On behalf of our client, we respectfully request review and approval for a Wetland Conditional Use Permit.

We appreciate your consideration of these matters and look forward to presenting this project to you at the April 21, 2022, Planning Board meeting.

Respectfully,
TFMoran, Inc.

Land Management Plan

A Narrative for Invasive Plant Management and Native Plant Restoration

325 Little Harbor Road, Portsmouth, NE

Fall 2021

PARTERRE
ECOLOGICAL

Table of Contents

Introduction and Primary Goals

The Dilorenzo residence is located at 325 Little Harbor Road in Portsmouth. The 11-acre island lies near the mouth of the Piscataqua River and the majority of the site is within the 100' tidal river buffer. An inventory of existing native and invasive plant species can be found in this plan.

The primary goal of this plan is to seek approval from the Portsmouth Conservation Commission to offset home construction and landscape improvements within the 100' Tidal buffer. We propose to remove invasive species on site and to restore the area with native species that will benefit the ecosystem around Piscataqua Rive and reduce further incursion of invasive species on the island. An inventory of existing native and invasive plant species can be found in this plan.

We propose removing invasive species by low-impact manual hand methods and cut & dab herbicide application by licensed applicators. All invasive species greater than 1" in caliper will be cut and dabbed with herbicide to reduce the chance of erosion along the banks. All existing erosion will be stabilize and any soil disturbed during planting will be stabilized and seeded with native wildflower mix. Techniques are outlined in the report. After removal of invasive species we will restore with native shrubs and perennials that will help prevent resurgence of the invasive plants and enhance the existing ecology.

A mass of invasive Multiflora Rose along the edges of the horse paddock with maturing Black Swallowort pods hanging from the stem. The majority of the western portion of the island is healthy pine/oak forest, but invasives are dense in areas with historically high disturbance. We propose managing all invasive species and replacing with native alternatives.

325 Little Harbor Road
Invasive Plant Inventory

Mature invasive species have developed isolated populations along the tidal river buffer and threaten to spread into an otherwise healthy native ecosystem. We propose controlling invasive plant species that have developed self sustaining populations on the Dilorenzo's property and restoring with native species. The physiology of the invasive plants has enabled them to out compete the native plant community and compromise the ecological value of the native plant community. The dominant invasive plants, including Multiflora Rose and Barberry, disrupt the formation of a native understory by filling ecological niches and resisting any browsing by native species. A very small Japanese Knotweed population exists near the southwestern corner of the paddock. It can spread quickly in coastal areas and should be managed before it can establish itself. All invasive perennials and shrubs with viable fruit will be removed from the site. Poison Ivy is a native species with valuable ecological benefits. We propose control the and areas of human traffic.

Invasive Plant Species Identified:

Acer platanoides, Norway Maple
Alliaria petiolata, Garlic Mustard
Berberis thunbergii, Japanese Barberry
Celastrus orbiculatus, Asiatic Bittersweet
Cynanchum louiseae, Black Swallowort
Elaeagnus umbellata, Autumn Olive
Fallopia japonica, Japanese Knotweed
Frangula alnus, Glossy Buckthorn
Lonicera morrowii, Morrow's Honeysuckle
Rhamnus cathartica, Common Buckthorn
Rosa multiflora, Multiflora Rose

****Likely Invasive Plant Species Identified:***

Artemisia vulgaris, Mugwort
Deutzia scabra, Fuzzy Deutzia
Ligustrum vulgaris, Common Privet
Rhodotypos scandens, Jetbead
Vitus sp., Grape (Native but control)

* While not listed as an Invasive Species by ISC (New Hampshire Invasive Species Committee) these species can dominate the shrub layer and crowd out native trees and shrubs. We recommend removal of along with listed invasive plant species in wetland buffers and replace with native shrubs and trees.

Black Swallowort releasing seedheads in the paddock. The majority of this area is a healthy goldenrod/blackberry meadow with patches of Milkweed, but Black Swallowort can establish itself quickly and releases compounds in the soil to limit its competitor. Without intervention there will likely be a large infestation.

Invasive species are concentrated along the distrubed banks on the southwestern portion of the island. Along the pathway are dense stands of Multiflora Rose mixed with non native aggressive Forsythia and Deutzia. Along the paddock are dense patches of Bittersweet and Black Swallowort.

- Dense pockets of non-native aggressive species (not listed invasives) with some native speccies(1075 ft² @
- Mostly native species with patches of Black Swallowort and Bittersweet.
- Mostly native with a very few invasive shrubs and perennials (1075 ft² @ >1% Coverage)

325 Little Harbor Road
Invasive management techniques

We propose a combination of manual hand removal and cut & dab herbicide to control invasive plant species within the identified project areas over a phased time line. Once the initial identified invasive plant species have been removed by manual methods (described below), we propose seeding all exposed soil with native seed blend and begin planting identified tree, shrub and perennial plant species selected from the native plant community list that will increase the density and diversity of the existing wetland buffers.

Manual Hand Removal Methods:
Manual methods of invasive plant management will include hand pulling or cutting. To minimize soil disturbance, shallow-rooted invasive plants less than 1" in caliper will be hand pulled from the soil. Invasive plant species greater than 1" in diameter will be cut. All invasive plant material will be disposed of off site. Manual hand pulling and cutting will remove all invasive plants from the wetland buffer.

Cut and Dab and Foam application: All invasive plant species that have a base greater than 1" in caliper are proposed for herbicide application methods. Although invasive, the root systems of plants greater then 1" in caliper usually have extensive fibrous root systems, providing soil stabilization. So we propose a cut & dab method of application of a Triclopyr based herbicide (Garlon) or Glyphosate based herbicide approved for wetland use (trade name Rodeo) on individual cut stumps. Licensed Pesticide Applicators will complete all aspects of the proposed restoration. For treatment of perennial species that cannot be controlled with cut and dab or by manual methods should be treated by a foam based herbicide that is wiped onto the leaves using a cotton glove. This hyper-specific treatment limits any treatment of non-target plants. No treatment will occur in areas of standing water.

Qualified applicators with necessary Personal Protective Equipment paint the stems of invasive species after cutting

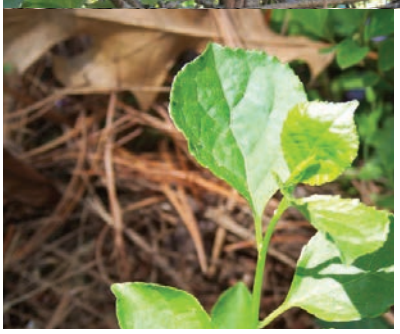
Proposed cut stump treatment (below) using hand tools and applying marking dye to eliminate possibility of treatment of stump twice, or missing stump entirely. (Above) Foam treatment allows highly specific placement of herbicide to remove invasive perennials that limits disturbance and protects surrounding species

325 Little Harbor Road
Asiatic Bittersweet ID and Management

Invasive Bittersweet (*Celastrus orbiculatus)* have the capacity to girdle, weaken, and even kill mature canopy trees. Without some frequency of removal, they will eventually open large holes in the canopy while suppressing saplings from filling the holes. They readily resprout after being cut and can damage the aesthetic and ecological value of meadows.

Mature stems produce thousands of bright red berries that mature in late fall and are spread by birds.

Removing the entire vines from trees is often dangerous and unnecessary (unless it poses safety risk). Our team recommends making cuts at shoulder height followed by a cut at 12" and immediate herbicide treatment. Bittersweet aggressively suckers after cutting so it is important to cut and treat during or after its flowering period (late June to December).



Identification: Alternate, circular light green leaves 2-5 in. long. Distinctive, large light colored vine. Red berries with orange casing appearing in late fall. Seedlings have light green leaves. Deep orange roots.

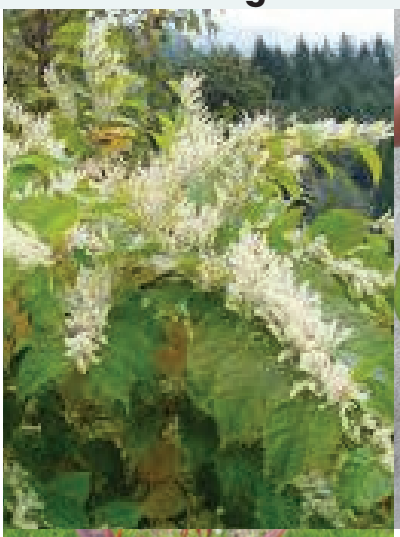
Japanese Knotweed Management

Japanese Knotweed (*Fallopia japonica)* is one of the most difficult invasive species to control. Its main mode of spreading is through cut portions of its rhizomes or stem, which can actively resprout even when 1 inch in length. Growing 10-15' and shading out any competitors, Japanese Knotweed can quickly form a monoculture. It can take 2-5 seasons to fully contain through repeat herbicide treatments. It is at its weakest point during the flowering stage, when nutrients are flowing back into the roots (Aug, Sept.) Unfortunately, taproots can extend over 6' below the ground making organic eradication nearly impossible without excavation. There are two ways to approach treatment.

1. Cut and treat: For smaller areas, involves cutting the stem between the 1st and 3rd node and adding a 66% solution of Aquaneat (glyphosate), generally 5 oz per treated stem. If density is less than 5 ft per plant treat every third stem. Do this for 2-5 seasons.
2. Cut in May, wipe leaves in fall or apply to stem in fall: In this case, dense stands of Knotweed are mown in end of May so when they regrow they are at hip height by August. They can then be easily wiped with a 6.0% Aquaneat (glyphosate) solution



Identification: Herbaceous perennial, with long heart shaped leaves. Young sprouts can be red, rhubarb in nature. Extensive roots can spread and colonize quickly and can reach 15 ft. at maturity.

Japanese Knotweed cut in preparation for a fall herbicide foliar wipe treatment (top left). Treatment of Japanese Knotweed stems using a cut and fill method (above). A combination of cut and fill in the first season and foliar wipe in the second has shown to be effective. Foliar wipe can be accomplished by applying herbicide to a glove and wiping leaves or by utilizing a foaming agent to help herbicide stick to the leaves (left). It is a highly specific treatment with little risk of drift.

Native Plant Inventory

Within the tidal river buffer is a diverse native plant community dominated by mature Oaks and White Pines with Chokeberry, Black Cherry, Arrowood Viburnum, and lowbush Blueberry in the understory. In the sunnier areas is a wet meadow featuring Rough Goldenrod, Alleghaney Blackberry, Sumac, Common Rush and Elderberry. An occupied Belted Kingfisher nest was found during the site visits. We propose utilizing these existing native plant species as indicators of what naturally inhabits this plant community and propose additional planting of these species and diversifying with other native trees, shrubs and perennials.

After invasive plant species have been removed from the wetland buffer, the area will be planted with one to five gallon native conservation grade New England native trees, shrubs and perennials from local seed and cutting sources. It is proposed that native plants will have greater than 90% coverage by the conclusion of the 3 year Order of Conditions. Native plants proposed for installation will add diversity of existing native plants, provide habitat and forage for wildlife, and reduce storm water and sediment flow wetland areas. Plants proposed for installation include:

	Quantity	Size	Scientific name	Common name
Within 100' Tidal River Buffer	4	3-4'	Amelanchier laevis	Shadblow Serviceberry
	2	3-4'	Acer rubrum	Red Maple

After planting the conservation grade native shrubs and trees and slope stabilizing perennials, we propose the area be seeded with a custom Dormant seed mix at recommended seeding rates. This dense seed mix will supply a matrix of vegetative growth to cover disturbed soils, and reduce recolonization of invasive plant species. These mixes include:

New England Showy New England Wildflower mix
New England Understory Grass and Forb Mix

Maintenance Schedule

The recommendations for restoration take into consideration the long term health of the wetland. Once the invasive plant species have been managed in a locus area and any native plants installed, a long-term maintenance plan will be set in motion with the goal of continued control of invasive plant species on site, serve, and sustain native plant populations, and improve the native plant diversity and aesthetic beauty of the wetland.

Fall - Winter 2021

- Complete invasive species management of Buckthorn and woody invasive plant species by cut and dab methods
- Identify and manually hand-pull identified invasive shrubs and vines under 1' in caliper
- Cover all disturbed soil along with native seed mix

Winter 2021-Spring 2022

- Continue utilizing control methods of invasive plant management to exhaust seed bank
- Begin planting native plant species according to approved quantities and varieties
- Monitor plant response and continue hand pulling and herbicide application methods on re sprouting invasive plant species
- Cover exposed soils Conservation seed mix

Summer 2022

- Cut and dab/Foam application to Japanese Knotweed and remaining invasive shrub and tree species
- Continue utilizing control methods of invasive plant management to exhaust seed bank
- Continue planting native plant species according to approved quantities and varieties

Fall 2022 - Summer 2023

- Monitor plant response and continue hand pulling and herbicide application methods on re sprouting invasive plant species
- Followup treatment of Japanese Knotweed (Mowing in spring, treating in fall)
- Cover exposed soils Conservation seed mix
- Monitor native species for plant health

Ongoing Maintenance and Monitoring:

- After the treatments of fall 2023, the management plan should be re-evaluated. If management treatments have been successful, only monitoring and minimal hand removal should be required to keep invasive plant species from being reintroduced. Native trees, shrubs, and herbaceous forbs should dominate the wetland buffer.
- Implementation of the LMP should be completed by qualified professionals including:
  NH Licensed pesticide applicator
  Certified Massachusetts/NH Invasive Species Management
  MCH Massachusetts Certified Horticulturist
- Monitoring reports shall be submitted to conservation at the end of each growing season indicating invasive species management efforts and establishment of the restoration plantings.

Bittersweet

Description:

Celastrus orbiculatus, Asiatic Bittersweet is a deciduous climbing vine common in areas of disturbance in our New England forests. It has glossy, rounded leaves that are alternate with finely toothed margins. The leaves turn yellow in the fall. The fruiting plants produce small greenish flower clusters from leaf axils that mature in fall to produce high numbers of fruiting seed. The seed are noticeably yellow, globular capsules that split open at maturity to reveal red-orange fruiting seeds. Roots are also distinctly orange.

Habitat:

Bittersweet spreads easily into forest edges, woodlands, unmanaged meadows and old fields. Most disturbed sites that are not being actively managed that receive full sun are susceptible. The vine can tolerate shade but is often found in more open, sunny areas.

Management:

Asiatic Bittersweet management is a combination of manual hand pulling with cut & dab herbicide treatments. For established plants, vines should be cut to ground to reduce mass. Persistent root infestations will require repeat cutting and treatments over several seasons. Rake any seeds present, bagging in plastic bags, tying, and disposing of correctly.

Celastrus orbiculatus,
Asiatic Bittersweet

Honeysuckle

Description:

Lonicera morrowii, Morrow's honeysuckles are upright, deciduous shrubs that typically have a multi-stem mounding appearance. Oval leaves are opposite along the stem with smooth edges (no teeth or lobes) and hairy on the underside. Mature stems are often hollow on the interior and peeling on the outer bark. In the spring pairs of fragrant, tubular flowers less than an inch long are borne along the stem in the leaf axils. The fruits are red to orange, and fleshy .

Habitat:

Honeysuckles are relatively shade-intolerant and most often occur in forest edges, abandoned fields, and other open, upland habitats. Woodlands and open meadows, especially those that have been grazed or otherwise disturbed and are left unmanaged are also highly susceptible. Morrow's Honeysuckle have the greatest habitat diversity and are capable of invading wetland edges and other uncommon habitat types.

Management:

Morrows Honeysuckle management is a combination of mechanical mowing and manual hand pulling with cut and dab herbicide treatments. When feasible, the root system is generally shallow and plants can be uprooted easily. Persistent root re sprouting may require repeat cutting with herbicide application over several seasons to fully control.

Lonicera morrowii,
Morrow's Honeysuckle

Buckthorn

Description:
Frangula alnus, Glossy Buckthorn is a deciduous shrub that grows up to 20 ft.. tall. The oblong leaves are up to 2" long, arranged alternately along the stem and are dark green on the surface, glossy above and slightly pubescent beneath. The leaves turn yellow in the fall, and remain on the plant when most other species have already lost their leaves. The yellow-green flowers are arranged in 1-8 flowered sessile, glabrous umbels. This plant flowers after the leaves expand, from May to September . The fruit ripen from red to black July to August.

Habitat:
Buckthorn thrives in early successional habitat. Abandoned agricultural or pasture lands, an opening in canopy within woodland, or unmanaged meadows are common areas. Buckthorn will also tolerate wetland soils where it can form dense stands that suppress the growth of native plant species. The seed is readily dispersed by birds, and the extended productivity of the fruit into winter allows the plant to be dispersed through the entire season.

Management:
Manual methods of hand-pulling seedlings is recommended. For larger saplings, a 'Weed Wrench' is effective. Mature Buckthorn can also be cut and the stump application of Triclopyr based herbicide. Rake any seeds present, bagging and disposing of correctly.

Frangula alnus,
Glossy buckthorn

Multiflora Rose

Description:
Rosa multiflora, Multiflora Rose is a shrub with arching canes with a mounding shape in the landscape. The leaves are divided into five to eleven sharply toothed leaflets. The base of each leaf stalk has a pair of fringed bracts which is a key identifier of the plant from other wild rose. Beginning in early summer, clusters of showy white flowers appear. The flowers are followed by developing red fruit, or hips, during the summer that remain on the plant through the winter.

Habitat:
Multiflora Rose thrives in early successional habitat. The rose has a wide tolerance for various soil, moisture, and light conditions. It occurs in dense woods, along river banks and roadsides and in open unmanaged fields. It can form a dense understory that suppresses growth of native plant species. The seed is readily dispersed by birds, and the extended productivity of the fruit into winter months allows wide spread distribution of the plant.

Management:
Manual methods of hand-pulling seedlings is effective. For more established shrubs, a combination of pruning to reduce mass followed by cut & dab treatments with a Triclopyr based herbicide is recommended. Persistent root infestations may require repeat cutting over several seasons. Rake any seeds present, bagging and disposing of correctly.

BY EMAIL AND FIRST CLASS MAIL
Peter Stith, Chair
City of Portsmouth
Technical Advisory Committee
1 Junkins Avenue
Portsmouth NH 03801

Dear Chairman Stith:

Please accept this letter on behalf of the ADL 325 Little Harbor Road Trust ("ADL") with respect to the pending Wetland Conditional Use Permit ("CUP") application for 325 Little Harbor Road (the "Property"). The purpose of this letter is to provide a history of the proposed residential project and to address the scope of technical advisory committee ("TAC") review.

This project has been pending since August 2017, when ADL first applied for a CUP to replace the existing home and renovate/construct associated residential structures on the Property. That CUP received full Planning Board and Conservation Commission review at the time and was approved shortly thereafter on September 25, 2017. The proposal also received NHDES wetland and shoreland permitting approval in February 2018. Construction of the project lapsed as a result of the untimely death of ADL's general contractor at the time.

On September 29, 2021, ADL applied for a new CUP for a modified design in a new location on the Property. ADL met with the Planning Board and Conservation Commission in November 2021. The proposal received a favorable recommendation from the Conservation Commission for the modified project and was originally scheduled for the December 16, 2021 Planning Board meeting.

Shortly prior to the December Planning Board hearing, however, City staff requested that the project be reviewed by TAC due to complexities related to utilities. ADL voluntarily agreed to review despite the fact that TAC is not required for residential projects such as ADL's pending proposal. ADL's project team met with TAC at its February 8, 2022 work session and again at its March 1, 2022 meeting. They also met with the Conservation Commission on March 9th and received a second favorable recommendation for the project.

ADL has addressed all comments made by the members at the February 8th work session and March 1st meeting. All requested information and documentation that can reasonably be provided at this time has been delivered. All other outstanding requests relate to items that require third party agreements (e.g., utility licenses) and/or are more properly provided subsequent to approval and finalization of plans, as part of the building permit process.

The scope of TAC's review, submitted to voluntarily by the applicant, was limited to technical utility concerns related to the pending wetlands CUP, and not the overall residential project, which has already received multiple Planning Board, Conservation Commission and NH DES review. ADL has provided all requested information and documentation reasonably available at this point in the approval process. This proposal has been pending since 2017 in its original form and for over four months in its current iteration.

Accordingly, I respectfully remind the committee of the limited scope of its review and request that the project be recommended for review and approval at the Planning Board's next regularly scheduled meeting on April 21, 2022.

Very truly yours,

Kevin M. Baum

Re: 325 Little Harbor Rd.
Portsmouth, NH 03801

To whom it may concern,

TE2 Engineering LLC has been hired to design the mechanical, electrical, plumbing and fire protection (MEPFP) systems for the project addressed above. TE2 Engineering, LLC is working in close contact with many team members including but not limited to the architect (GP Schafer), the civil engineer (TF Moran), and general contractor (Youngblood Builders) to design safe, effective and code compliant MEPFP systems.

The water service has been designed based on the current list of plumbing fixtures and building layouts. This calculation has yielded a 4" domestic water line for the property. Our intent is to design an automatic sprinkler system based on the NPFA 13 D standard for the main house, the guest cottage and pool cabana buildings. Each of these buildings would be provided with a tank & pump system to be independent of the domestic water supply. Each fire pump would be powered by utility power, but also backed up on emergency power from a standby generator. In addition, each fire tank will have an automatic fill valve based on the relative water level in the tank, should additional water be required.

We will continue to design the MEPFP systems and look forward to working with you on this project.

Sincerely,

Drew Domnarski, P.E.

WETLAND SCIENTIST NOTE

HIGHEST OBSERVABLE TIDE LINE (HOTL) AND SALT MARSH WERE DELINEATED BY MARC JACOBS, CERTIFIED WETLAND SCIENTIST 090, ON MAY 24, 2019. SALT MARSH WAS DELINEATED BASED UPON THE EXTENT OF ROOTED EMERGENT SALT-TOLERANT VEGETATION OBSERVED DURING LOW TIDE. HOTL WAS DELINEATED BASED UPON THE CODE OF ADMINISTRATIVE RULES, NH DEPARTMENT OF ENVIRONMENTAL SERVICES – WETLANDS BUREAU – ENV WT 100-900, ESPECIALLY ENV-WT 101.49. COPIES OF SITE PLANS WHICH DEPICT THE DELINEATION THAT HAVE BEEN REVIEWED BY THE WETLAND SCIENTIST ARE INDIVIDUALLY STAMPED, SIGNED AND DATED. THIS NOTE HAS BEEN CUSTOMIZED FOR THIS PROJECT.

CONSTRUCTION SEQUENCE NOTES

TO MINIMIZE EROSION AND SEDIMENTATION DUE TO CONSTRUCTION, CONSTRUCTION SHALL FOLLOW THIS GENERAL CONSTRUCTION SEQUENCE.

MODIFICATIONS TO THE SEQUENCE NECESSARY DUE TO THE CONTRACTOR'S SCHEDULE SHALL INCLUDE APPROPRIATE TEMPORARY AND PERMANENT EROSION AND SEDIMENTATION CONTROL MEASURES.

THE CONTRACTOR SHALL SCHEDULE WORK SUCH THAT ANY CONSTRUCTION AREA IS STABILIZED WITHIN 45 DAYS OF INITIAL DISTURBANCE EXCEPT AS NOTED BELOW. NO MORE THAN 5 ACRES OF DISTURBED LAND SHALL BE UNSTABILIZED AT ANY ONE TIME.

THE PROJECT SHALL BE MANAGED SO THAT IT MEETS THE REQUIREMENTS AND INTENT OF RSA 430:53 AND CHAPTER ARG 3800 RELATIVE TO INVASIVE SPECIES.

DO NOT TRAFFIC EXPOSED SOIL SURFACE OF INFILTRATION SYSTEMS WITH CONSTRUCTION EQUIPMENT. IF FEASIBLE, PERFORM EXCAVATIONS WITH EQUIPMENT POSITIONED OUTSIDE THE LIMITS OF THE INFILTRATION COMPONENTS OF THE SYSTEM.

DO NOT DISCHARGE SEDIMENT–LADEN WATERS FROM CONSTRUCTION ACTIVITIES (RUNOFF, WATER FROM EXCAVATIONS) TO STORMWATER BMP'S. STORMWATER RUNOFF MUST BE DIRECTED TO TEMPORARY PRACTICES UNTIL STORMWATER BMP'S ARE STABILIZED.

CONSTRUCTION SEQUENCE NOTES (CONTINUED)

DO NOT PLACE STORMWATER BMP'S INTO SERVICE UNTIL THE CONTRIBUTING AREAS HAVE BEEN FULLY STABILIZED.

AFTER THE INFILTRATION SYSTEM IS EXCAVATED TO THE FINAL DESIGN ELEVATION, THE FLOOR SHOULD BE DEEPLY TILLED WITH A ROTARY TILLER OR DISC HARROW TO RESTORE THE INFILTRATION RATES, FOLLOWED BY A PASS WITH A LEVELING DRAG.

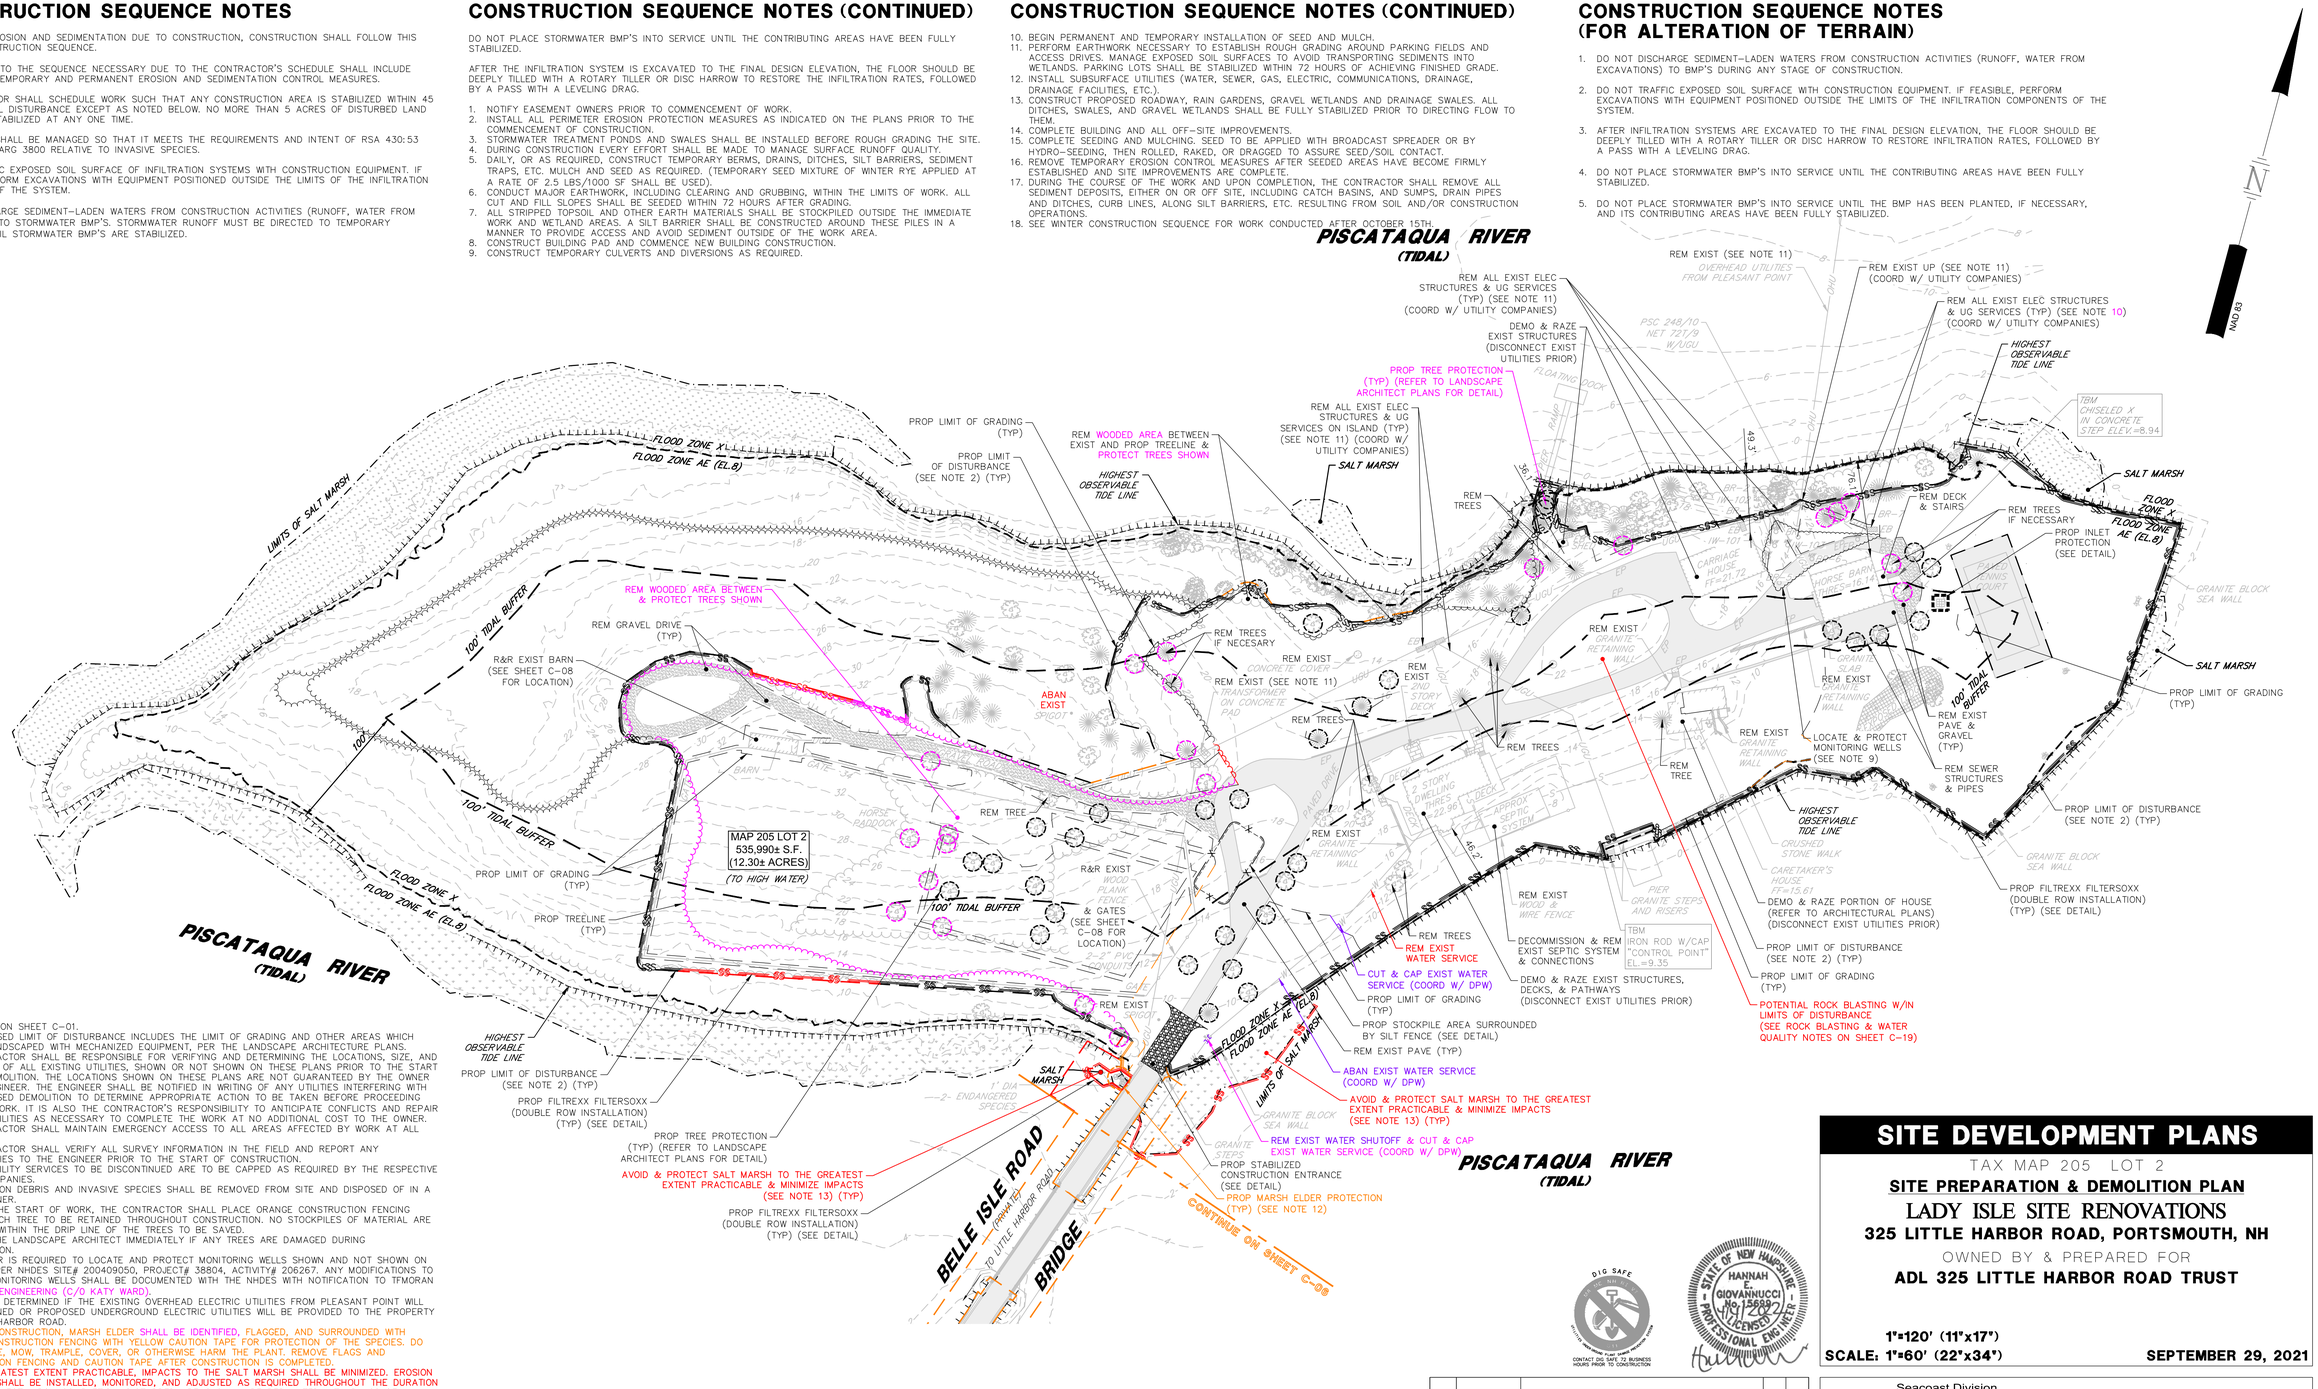
1. NOTIFY EASEMENT OWNERS PRIOR TO COMMENCEMENT OF WORK.
2. INSTALL ALL PERIMETER EROSION PROTECTION MEASURES AS INDICATED ON THE PLANS PRIOR TO THE COMMENCEMENT OF CONSTRUCTION.
3. STORMWATER TREATMENT PONDS AND SWALES SHALL BE INSTALLED BEFORE ROUGH GRADING THE SITE.
4. DURING CONSTRUCTION EVERY EFFORT SHALL BE MADE TO MANAGE SURFACE RUNOFF QUALITY.
5. DAILY, OR AS REQUIRED, CONSTRUCT TEMPORARY BERMS, DRAINS, DITCHES, SILT BARRIERS, SEDIMENT TRAPS, ETC. MULCH AND SEED AS REQUIRED. (TEMPORARY SEED MIXTURE OF WINTER RYE APPLIED AT A RATE OF 2.5 LBS/1000 SF SHALL BE USED).
6. CONDUCT MAJOR EARTHWORK, INCLUDING CLEARING AND GRUBBING, WITHIN THE LIMITS OF WORK. ALL CUT AND FILL SLOPES SHALL BE SEEDED WITHIN 72 HOURS AFTER GRADING.
7. ALL STRIPPED TOPSOIL AND OTHER EARTH MATERIALS SHALL BE STOCKPILED OUTSIDE THE IMMEDIATE WORK AND WETLAND AREAS. A SILT BARRIER SHALL BE CONSTRUCTED AROUND THESE PILES IN A MANNER TO PROVIDE ACCESS AND AVOID SEDIMENT OUTSIDE OF THE WORK AREA.
8. CONSTRUCT BUILDING PAD AND COMMENCE NEW BUILDING CONSTRUCTION.
9. CONSTRUCT TEMPORARY CULVERTS AND DIVERSIONS AS REQUIRED.

CONSTRUCTION SEQUENCE NOTES (CONTINUED)

10. BEGIN PERMANENT AND TEMPORARY INSTALLATION OF SEED AND MULCH.
11. PERFORM EARTHWORK NECESSARY TO ESTABLISH ROUGH GRADING AROUND PARKING FIELDS AND ACCESS DRIVES. MANAGE EXPOSED SOIL SURFACES TO AVOID TRANSPORTING SEDIMENTS INTO WETLANDS. PARKING LOTS SHALL BE STABILIZED WITHIN 72 HOURS OF ACHIEVING FINISHED GRADE.
12. INSTALL SUBSURFACE UTILITIES (WATER, SEWER, GAS, ELECTRIC, COMMUNICATIONS, DRAINAGE, DRAINAGE FACILITIES, ETC.).
13. CONSTRUCT PROPOSED ROADWAY, RAIN GARDENS, GRAVEL WETLANDS AND DRAINAGE SWALES. ALL DITCHES, SWALES, AND GRAVEL WETLANDS SHALL BE FULLY STABILIZED PRIOR TO DIRECTING FLOW TO THEM.
14. COMPLETE BUILDING AND ALL OFF–SITE IMPROVEMENTS.
15. COMPLETE SEEDING AND MULCHING. SEED TO BE APPLIED WITH BROADCAST SPREADER OR BY HYDRO–SEEDING, THEN ROLLED, RAKED, OR DRAGGED TO ASSURE SEED/SOIL CONTACT.
16. REMOVE TEMPORARY EROSION CONTROL MEASURES AFTER SEEDED AREAS HAVE BECOME FIRMLY ESTABLISHED AND SITE IMPROVEMENTS ARE COMPLETE.
17. DURING THE COURSE OF THE WORK AND UPON COMPLETION, THE CONTRACTOR SHALL REMOVE ALL SEDIMENT DEPOSITS, EITHER ON OR OFF SITE, INCLUDING CATCH BASINS, AND SUMPS, DRAIN PIPES AND DITCHES, CURB LINES, ALONG SILT BARRIERS, ETC. RESULTING FROM SOIL AND/OR CONSTRUCTION OPERATIONS.
18. SEE WINTER CONSTRUCTION SEQUENCE FOR WORK CONDUCTED AFTER OCTOBER 15TH.

CONSTRUCTION SEQUENCE NOTES (FOR ALTERATION OF TERRAIN)

1. DO NOT DISCHARGE SEDIMENT–LADEN WATERS FROM CONSTRUCTION ACTIVITIES (RUNOFF, WATER FROM EXCAVATIONS) TO BMP'S DURING ANY STAGE OF CONSTRUCTION.
2. DO NOT TRAFFIC EXPOSED SOIL SURFACE WITH CONSTRUCTION EQUIPMENT. IF FEASIBLE, PERFORM EXCAVATIONS WITH EQUIPMENT POSITIONED OUTSIDE THE LIMITS OF THE INFILTRATION COMPONENTS OF THE SYSTEM.
3. AFTER INFILTRATION SYSTEMS ARE EXCAVATED TO THE FINAL DESIGN ELEVATION, THE FLOOR SHOULD BE DEEPLY TILLED WITH A ROTARY TILLER OR DISC HARROW TO RESTORE INFILTRATION RATES, FOLLOWED BY A PASS WITH A LEVELING DRAG.
4. DO NOT PLACE STORMWATER BMP'S INTO SERVICE UNTIL THE CONTRIBUTING AREAS HAVE BEEN FULLY STABILIZED.
5. DO NOT PLACE STORMWATER BMP'S INTO SERVICE UNTIL THE BMP HAS BEEN PLANTED, IF NECESSARY, AND ITS CONTRIBUTING AREAS HAVE BEEN FULLY STABILIZED.



NOTES

1. SEE NOTES ON SHEET C–01.
2. THE PROPOSED LIMIT OF DISTURBANCE INCLUDES THE LIMIT OF GRADING AND OTHER AREAS WHICH WILL BE LANDSCAPED WITH MECHANIZED EQUIPMENT, PER THE LANDSCAPE ARCHITECTURE PLANS.
3. THE CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFYING AND DETERMINING THE LOCATIONS, SIZE, AND ELEVATIONS OF ALL EXISTING UTILITIES, SHOWN OR NOT SHOWN ON THESE PLANS PRIOR TO THE START OF ANY DEMOLITION. THE LOCATIONS SHOWN ON THESE PLANS ARE NOT GUARANTEED BY THE OWNER OR THE ENGINEER. THE ENGINEER SHALL BE NOTIFIED IN WRITING OF ANY UTILITIES INTERFERING WITH THE PROPOSED DEMOLITION TO DETERMINE APPROPRIATE ACTION TO BE TAKEN BEFORE PROCEEDING WITH THE WORK. IT IS ALSO THE CONTRACTOR'S RESPONSIBILITY TO ANTICIPATE CONFLICTS AND REPAIR EXISTING UTILITIES AS NECESSARY TO COMPLETE THE WORK AT NO ADDITIONAL COST TO THE OWNER.
4. THE CONTRACTOR SHALL MAINTAIN EMERGENCY ACCESS TO ALL AREAS AFFECTED BY WORK AT ALL TIMES.
5. THE CONTRACTOR SHALL VERIFY ALL SURVEY INFORMATION IN THE FIELD AND REPORT ANY DISCREPANCIES TO THE ENGINEER PRIOR TO THE START OF CONSTRUCTION.
6. EXISTING UTILITY SERVICES TO BE DISCONTINUED ARE TO BE CAPPED AS REQUIRED BY THE RESPECTIVE UTILITY COMPANIES.
7. CONSTRUCTION DEBRIS AND INVASIVE SPECIES SHALL BE REMOVED FROM SITE AND DISPOSED OF IN A LEGAL MANNER.
8. PRIOR TO THE START OF WORK, THE CONTRACTOR SHALL PLACE ORANGE CONSTRUCTION FENCING AROUND EACH TREE TO BE RETAINED THROUGHOUT CONSTRUCTION. NO STOCKPILES OF MATERIAL ARE PERMITTED WITHIN THE DRIP LINE OF THE TREES TO BE SAVED.
9. CONTACT THE LANDSCAPE ARCHITECT IMMEDIATELY IF ANY TREES ARE DAMAGED DURING CONSTRUCTION.
10. CONTRACTOR IS REQUIRED TO LOCATE AND PROTECT MONITORING WELLS SHOWN AND NOT SHOWN ON THE PLAN PER NHDES SITE# 200409050, PROJECT# 38804, ACTIVITY# 206267. ANY MODIFICATIONS TO EXISTING MONITORING WELLS SHALL BE DOCUMENTED WITH THE NHDES WITH NOTIFICATION TO TFMORAN AND ARIES ENGINEERING (C/O KATY WARD).
11. IT IS TO BE DETERMINED IF THE EXISTING OVERHEAD ELECTRIC UTILITIES FROM PLEASANT POINT WILL BE MAINTAINED OR PROPOSED UNDERGROUND ELECTRIC UTILITIES WILL BE PROVIDED TO THE PROPERTY VIA LITTLE HARBOR ROAD.
12. PRIOR TO CONSTRUCTION, MARSH ELDER SHALL BE IDENTIFIED, FLAGGED, AND SURROUNDED WITH ORANGE CONSTRUCTION FENCING WITH YELLOW CAUTION TAPE FOR PROTECTION OF THE SPECIES. DO NOT REMOVE, MOW, TRAMPLE, COVER, OR OTHERWISE HARM THE PLANT. REMOVE FLAGS AND CONSTRUCTION FENCING AND CAUTION TAPE AFTER CONSTRUCTION IS COMPLETED.
13. TO THE GREATEST EXTENT PRACTICABLE, IMPACTS TO THE SALT MARSH SHALL BE MINIMIZED. EROSION CONTROLS SHALL BE INSTALLED, MONITORED, AND ADJUSTED AS REQUIRED THROUGHOUT THE DURATION OF THE PROJECT. UPON COMPLETION, DISTURBED AREAS SHALL BE REPLANTED WITH PLUGS OF SALTMARSH CORDGRASS (SPARTINA ALTERNIFLORA).

SOIL NOTES

THE SITE SPECIFIC SOIL MAP WAS PREPARED IN DECEMBER 2020 BY MARC JACOBS, CSS, CWS, PWS, CPESC. THIS SOIL MAP FALLS WITHIN THE TECHNICAL STANDARDS OF THE NATIONAL COOPERATIVE SOIL SURVEY. IT IS A SPECIAL PURPOSE PRODUCT INTENDED FOR USE IN COMPLYING WITH THE NEW HAMPSHIRE ALTERATION OF TERRAIN (AOT) REGULATIONS (ENV-WQ 1500). IT WAS PRODUCED BY MARC JACOBS, CERTIFIED SOIL SCIENTIST #038, BASED UPON ACTUAL FIELD INVESTIGATIONS CONDUCTED IN DECEMBER 2020 AND IS NOT A PRODUCT OF THE USDA NATURAL RESOURCES CONSERVATION SERVICE. THE SITE-SPECIFIC SOIL SURVEY WAS CONDUCTED ACCORDING TO SPECIAL PUBLICATION NO. 3 – SITE-SPECIFIC SOIL MAPPING STANDARDS FOR NEW HAMPSHIRE AND VERMONT, VERSION 5.0 DATED DECEMBER 2017 AS PUBLISHED, MAINTAINED AND AMENDED BY THE SOCIETY OF SOIL SCIENTISTS OF NORTHERN NEW ENGLAND. THERE IS A REPORT THAT ACCOMPANIES THIS SOIL MAP. COPIES OF THE SOIL SURVEY MAP THAT HAVE BEEN REVIEWED BY THE SCIENTIST(S) ARE INDIVIDUALLY STAMPED, SIGNED AND DATED. NOTES

1. SEE NOTES ON SHEET C–01, EROSION CONTROL NOTES ON SHEET C–19, EROSION CONTROL DETAILS ON SHEET C–20, AND THE APPROVED SWPPP, AS APPLICABLE.
2. THE PROPOSED LIMIT OF DISTURBANCE INCLUDES THE LIMIT OF GRADING AND OTHER AREAS WHICH WILL BE BE LANDSCAPED WITH MECHANIZED EQUIPMENT, PER THE LANDSCAPE ARCHITECTURE PLANS.
3. INSTALL SILT BARRIER ALONG THE PERIMETER OF THE AREA TO BE DISTURBED AS FIRST ORDER OF WORK.
4. PROVIDE INLET PROTECTION BARRIERS AROUND ALL EXISTING AND PROPOSED STORM DRAINAGE INLETS WITHIN THE WORK LIMITS AND MAINTAIN FOR THE DURATION OF THE PROJECT UNTIL PAVEMENT HAS BEEN INSTALLED. INLET PROTECTION BARRIERS SHALL BE IN PLACE AT ALL CATCH BASINS PRIOR TO THE DISTURBANCE OF SOIL.
5. DUST CONTROL SHALL BE MAINTAINED THROUGHOUT THE CONSTRUCTION PERIOD. IT SHALL BE ACCOMPLISHED BY THE UNIFORM APPLICATION OF CALCIUM CHLORIDE AT THE RATE OF 1–1/2 POUNDS PER SQUARE YARD BY MEANS OF A LIME SPREADER OR OTHER APPROVED METHOD. WATER MAY ALSO BE USED FOR DUST CONTROL, AND APPLIED BY SPRINKLING WITH WATER TRUCK DISTRIBUTORS, AS REQUIRED.
6. THE SITE WILL REQUIRE A USEPA NPDES PERMIT FOR STORMWATER DISCHARGE FOR THE SITE CONSTRUCTION IF THE DISTURBANCE EXCEEDS ONE ACRE. THE CONSTRUCTION SITE OPERATOR SHALL DEVELOP AND IMPLEMENT A CONSTRUCTION STORM WATER POLLUTION PREVENTION PLAN (SWPPP) IN ACCORDANCE WITH EPA REGULATIONS AND THE CONSTRUCTION GENERAL PERMIT WHICH SHALL REMAIN ON SITE AND MADE ACCESSIBLE TO THE PUBLIC. THE SITE CONTRACTOR SHALL COORDINATE WITH THE OWNER TO SUBMIT AN eNOI AT LEAST 14 DAYS IN ADVANCE OF ANY EARTHWORK ACTIVITIES AT THE SITE. A COMPLETED NOTICE OF TERMINATION (NOT) SHALL BE SUBMITTED TO NPDES PERMITTING AUTHORITY WITHIN 30 DAYS AFTER EITHER OF THE FOLLOWING CONDITIONS HAVE BEEN MET: FINAL STABILIZATION HAS BEEN ACHIEVED ON ALL PORTIONS OF THE SITE FOR WHICH THE PERMITTEE IS RESPONSIBLE FOR, OR ANOTHER OPERATOR/PERMITTEE HAS ASSUMED CONTROL OVER ALL AREAS OF THE SITE THAT HAVE NOT BEEN FINALLY STABILIZED.
7. SILT PROTECTION MEASURES SHALL BE INSTALLED IN ACCORDANCE WITH THE DETAILS CONTAINED IN THIS PLAN SET.
8. CONSTRUCT JUTE MATTING ON ALL SLOPES STEEPER THAN 3:1, DISTURBED AREAS SLOPING TOWARDS WETLANDS AND ALL LOCATIONS SHOWN ON PLAN.
9. INSPECT EROSION CONTROL MEASURES WEEKLY AND AFTER EACH RAIN STORM OF 0.10" OR GREATER. REPAIR/MODIFY SILT BARRIER AS NECESSARY TO MAXIMIZE FILTER EFFICIENCY. REMOVE SEDIMENT WHEN SEDIMENT IS 1/3 THE STRUCTURE HEIGHT.
10. PROVIDE SILT BARRIERS AT THE BASE OF CUT AND FILL SLOPES UNTIL COMPLETION OF THE PROJECT OR UNTIL VEGETATION BECOMES ESTABLISHED ON SLOPES. EROSION PROTECTION BELOW FILL SLOPES SHALL BE PLACED IMMEDIATELY AFTER CLEARING, PRIOR TO EMBANKMENT CONSTRUCTION.
11. ALL DISTURBED AREAS SHALL BE REVEGETATED AS QUICKLY AS POSSIBLE. ALL CUT AND FILL SLOPES SHALL BE SEEDED WITHIN 72 HOURS AFTER GRADING.
12. ALL WORK AREAS TO BE STABILIZED AT THE END OF EACH WORK DAY AND PRIOR TO ANY PREDICTED SIGNIFICANT RAIN EVENT.
13. AN AREA SHALL BE CONSIDERED STABLE IF ONE OF THE FOLLOWING HAS OCCURRED:
    A. BASE COURSE GRAVELS, WHICH MEET THE REQUIREMENTS OF NHDOT STANDARD FOR ROAD AND BRIDGE CONSTRUCTION, 2016, ITEM 304.2, ARE INSTALLED IN AREAS TO BE PAVED
    B. A MINIMUM OF 85% VEGETATED GROWTH HAS BEEN ESTABLISHED
    C. A MINIMUM OF 3" OF NON–EROSIVE MATERIAL SUCH AS STONE OR RIP RAP HAS BEEN INSTALLED
    D. EROSION CONTROL BLANKETS HAVE BEEN PROPERLY INSTALLED
14. ALL CATCH BASINS, MANHOLES, AND DRAIN LINES SHALL BE THOROUGHLY CLEANED OF ALL SEDIMENT AND DEBRIS AFTER ALL AREAS HAVE BEEN STABILIZED.
15. CONTRACTOR IS RESPONSIBLE FOR MAINTAINING SLOPE STABILITY DURING CONSTRUCTION.
16. THE EROSION CONTROL PRACTICES SHOWN ON THESE PLANS ARE ILLUSTRATIVE ONLY AND SHALL BE SUPPLEMENTED BY THE SITE CONTRACTOR AS NEEDED.
17. TO THE GREATEST EXTENT PRACTICABLE, IMPACTS TO THE SALT MARSH SHALL BE MINIMIZED. EROSION CONTROLS SHALL BE INSTALLED, MONITORED, AND ADJUSTED AS REQUIRED THROUGHOUT THE DURATION OF THE PROJECT. UPON COMPLETION, DISTURBED AREAS SHALL BE REPLANTED WITH PLUGS OF SALTMARSH CORDGRASS (SPARTINA ALTERNIFLORA).

   D. ANY SEDIMENT DEPOSITS REMAINING IN PLACE AFTER THE SILT BARRIER IS NO LONGER REQUIRED SHALL BE DRESSED TO CONFORM WITH THE EXISTING GRADE, PREPARED AND SEEDED.

C. MULCHING

1. TIMING

   IN ORDER FOR MULCH TO BE EFFECTIVE, IT MUST BE IN PLACE PRIOR TO MAJOR STORM EVENTS. THERE ARE TWO (2) TYPES OF STANDARDS WHICH SHALL BE USED TO ASSURE THIS:

   A. APPLY MULCH PRIOR TO ANY STORM EVENT.

   THIS IS APPLICABLE WHEN WORKING WITHIN 100' OF WETLANDS. IT WILL BE NECESSARY TO CLOSELY MONITOR WEATHER PREDICTIONS, USUALLY BY CONTACTING THE NATIONAL WEATHER SERVICE, TO HAVE ADEQUATE WARNING OF SIGNIFICANT STORMS.

   B. REQUIRED MULCHING WITHIN A SPECIFIED TIME PERIOD.

   THE TIME PERIOD CAN RANGE FROM 14 TO 21 DAYS OF INACTIVITY ON AN AREA, WHERE THE LENGTH OF TIME VARIES WITH SITE CONDITIONS. PROFESSIONAL JUDGMENT SHALL BE USED TO EVALUATE THE INTERACTION OF SITE CONDITIONS (SOIL ERODIBILITY, SEASON OF YEAR, EXTENT OF DISTURBANCE, PROXIMITY TO SENSITIVE RESOURCES, ETC.) AND THE POTENTIAL IMPACT OF EROSION ON ADJACENT AREAS TO CHOOSE AN APPROPRIATE TIME RESTRICTION.

2. GUIDELINES FOR WINTER MULCH APPLICATION.

   WHEN MULCH IS APPLIED TO PROVIDE PROTECTION OVER WINTER (PAST THE GROWING SEASON) IT SHALL BE AT A RATE OF 6,000 POUNDS OF HAY OR STRAW PER ACRE. A TACKIFIER MAY BE ADDED TO THE MULCH.

3. MAINTENANCE

   ALL MULCHES MUST BE INSPECTED PERIODICALLY, IN PARTICULAR AFTER RAINSTORMS, TO CHECK FOR RILL EROSION. IF LESS THAN 90% OF THE SOIL SURFACE IS COVERED BY MULCH, ADDITIONAL MULCH SHALL BE IMMEDIATELY APPLIED.

D. VEGETATIVE PRACTICE

1. AFTER ROUGH GRADING OF THE SUBGRADE HAS BEEN COMPLETED AND APPROVED, THE SUB GRADE SURFACE SHALL BE SCARIFIED TO A DEPTH OF 4". THEN, FURNISH AND INSTALL A LAYER OF LOAM PROVIDING A ROLLED THICKNESS AS SPECIFIED IN THESE PLANS. ANY DEPRESSIONS WHICH MAY OCCUR DURING ROLLING SHALL BE FILLED WITH ADDITIONAL LOAM, REGRADED AND REROLLED UNTIL THE SURFACE IS TRUE TO THE FINISHED LINES AND GRADES. ALL LOAM NECESSARY TO COMPLETE THE WORK UNDER THIS SECTION SHALL BE SUPPLIED BY THE SITE SUBCONTRACTOR.
2. ALL LARGE STIFF CLODS, LUMPS, BRUSH, ROOTS, DEBRIS, GLASS, STUMPS, LITTER, AND OTHER FOREIGN MATERIAL, AS WELL AS STONES OVER 1" IN DIAMETER, SHALL BE REMOVED FROM THE LOAM AND DISPOSED OF OFF SITE. THE LOAM SHALL BE RAKED SMOOTH AND EVEN.
3. THE LOAM SHALL BE PREPARED TO RECEIVE SEED BY REMOVING STONES, FOREIGN OBJECTS AND GRADING TO ELIMINATE WATER POCKETS AND IRREGULARITIES PRIOR TO PLACING SEED. FINISH GRADING SHALL RESULT IN STRAIGHT UNIFORM GRADES AND SMOOTH, EVEN SURFACES WITHOUT IRREGULARITIES TO LOW POINTS.
4. SHAPE THE AREAS TO THE LINES AND GRADES REQUIRED. THE SITE SUBCONTRACTOR'S ATTENTION IS DIRECTED TO THE SCHEDULING OF LOAMING AND SEEDING OF GRADED AREAS TO PERMIT SUFFICIENT TIME FOR THE STABILIZATION OF THESE AREAS. IT SHALL BE THE SITE SUBCONTRACTOR'S RESPONSIBILITY TO MAINTAIN THE AREAS DURING THE CONSTRUCTION PERIOD AND REGRADE, LOAM AND RESEED ANY DAMAGED AREAS.
5. ALL AREAS DISTURBED BY CONSTRUCTION WITHIN THE PROPERTY LINES AND NOT COVERED BY STRUCTURES, PAVEMENT, OR MULCH SHALL BE LOAMED AND SEEDED.
6. LIMESTONE SHALL BE THOROUGHLY INCORPORATED INTO THE LOAM LAYER AT A RATE OF 2 TONS PER ACRE IN ORDER TO PROVIDE A PH VALUE OF 5.5 TO 6.5.
7. IF PERMITTED PER LOCAL AND STATE REGULATIONS, FERTILIZER SHALL BE SPREAD ON THE TOP LAYER OF LOAM AND WORKED INTO THE SURFACE. FERTILIZER APPLICATION RATE SHALL BE 500 POUNDS PER ACRE OF 10-20-20 FERTILIZER.
8. SOIL CONDITIONERS AND FERTILIZER SHALL BE APPLIED AT THE RECOMMENDED RATES AND SHALL BE THOROUGHLY WORKED INTO THE LOAM. LOAM SHALL BE RAKED UNTIL THE SURFACE IS FINELY PULVERIZED, SMOOTH AND EVEN, AND THEN COMPACTED TO AN EVEN SURFACE CONFORMING TO THE REQUIRED LINES AND GRADES WITH APPROVED ROLLERS WEIGHING BETWEEN 4 1/2 POUNDS AND 5 1/2 POUNDS PER INCH OF WIDTH.
9. SEED SHALL BE SOWN AT THE RATE SHOWN BELOW. SOWING SHALL BE DONE ON A CALM, DRY DAY, PREFERABLY BY MACHINE, BUT IF BY HAND, ONLY BY EXPERIENCED WORKMEN. IMMEDIATELY BEFORE SEEDING, THE SOIL SHALL BE LIGHTLY RAKED. ONE HALF THE SEED SHALL BE SOWN IN ONE DIRECTION AND THE OTHER HALF AT RIGHT ANGLES TO THE ORIGINAL DIRECTION. IT SHALL BE LIGHTLY RAKED INTO THE SOIL TO A DEPTH NOT OVER 1/4" AND ROLLED WITH A HAND ROLLER WEIGHING NOT OVER 100 POUNDS PER LINEAR FOOT OF WIDTH.
10. HAY MULCH SHALL BE APPLIED IMMEDIATELY AFTER SEEDING AT A RATE OF 1.5 TO 2 TONS PER ACRE. MULCH THAT BLOWS OR WASHES AWAY SHALL BE REPLACED IMMEDIATELY AND ANCHORED USING APPROPRIATE TECHNIQUES FROM THE EROSION AND SEDIMENT CONTROL HANDBOOK.
11. THE SURFACE SHALL BE WATERED AND KEPT MOIST WITH A FINE SPRAY AS REQUIRED, WITHOUT WASHING AWAY THE SOIL, UNTIL THE GRASS IS WELL ESTABLISHED. ANY AREAS WHICH ARE NOT SATISFACTORILY COVERED WITH GRASS SHALL BE RESEEDED, AND ALL NOXIOUS WEEDS REMOVED.
12. THE SITE SUBCONTRACTOR SHALL PROTECT AND MAINTAIN THE SEEDED AREAS UNTIL ACCEPTED, INCLUDING CUTTING, AS SPECIFIED HEREIN AFTER UNDER MAINTENANCE AND PROTECTION.

MAINTENANCE:

THE OUTLET PROTECTION SHOULD BE CHECKED AT LEAST ANNUALLY AND AFTER EVERY MAJOR STORM. IF THE RIP RAP HAS BEEN DISPLACED, UNDERMINED OR DAMAGED, IT SHOULD BE CHECKED TO SEE THAT EROSION IS NOT OCCURRING. THE DOWNSTREAM CHANNEL SHOULD BE KEPT CLEAR OF OBSTRUCTIONS SUCH AS FALLEN TREES, DEBRIS, AND SEDIMENT THAT COULD CHANGE FLOW PATTERNS AND/OR TAILWATER DEPTHS ON THE PIPES. REPAIRS MUST BE CARRIED OUT IMMEDIATELY TO AVOID ADDITIONAL DAMAGE TO THE OUTLET PROTECTION APRON.

CONSTRUCTION SPECIFICATIONS:

1. THE SUBGRADE FOR THE FILTER MATERIAL, GEOTEXTILE FABRIC, AND RIP RAP SHALL BE PREPARED TO THE LINES AND GRADES SHOWN ON THE PLANS.
2. THE ROCK OR GRAVEL USED FOR FILTER OR RIP RAP SHALL CONFORM TO THE SPECIFIED GRADATION.
3. GEOTEXTILE FABRICS SHALL BE PROTECTED FROM PUNCTURE OR TEARING DURING THE PLACEMENT OF THE ROCK RIP RAP. DAMAGED AREAS IN THE FABRIC SHALL BE REPAIRED BY PLACING A PIECE OF FABRIC OVER THE DAMAGED AREA OR BY COMPLETE REPLACEMENT OF THE FABRIC. ALL OVERLAPS REQUIRED FOR REPAIRS OR JOINING TWO PIECES OF FABRIC SHALL BE A MINIMUM OF 12".
4. STONE FOR THE RIP RAP MAY BE PLACED BY EQUIPMENT AND SHALL BE CONSTRUCTED TO THE FULL LAYER THICKNESS IN ONE OPERATION AND IN SUCH A MANNER AS TO PREVENT SEGREGATION OF THE STONE SIZES.
5. ADD ANIMAL SCREEN TO FLARED END SECTION OUTLET.

TRANSVERSE SECTION AT TEMPORARY JOIST SUPPORT

SCALE: 3/4"=1'-0"

NOTE:
DESIGN INTENT IS TO INSTALL TEMPORARY SUPPORT BEAMS UNDER JOISTS DIRECTLY IN FRONT OF ABUTMENTS; WHERE AT THE BEARING POINT, THE JOIST HAVE EXPERIENCED SEVERE SECTION LOSS AND CAN NO LONGER SAFELY SUPPORT HS-20-44 DESIGN VEHICLE LOADS.

PROJECT BACKGROUND:

1.) ECKMAN ENGINEERING, LLC ON FEBRUARY 3, 2022 COMPLETED A VISUAL INSPECTION OF THE EXISTING BELLE ISLE BRIDGE WHICH WAS FOLLOWED BY A SURVEY THAT INCLUDED DETAILED MEASUREMENT OF THE EXISTING SUBSTRUCTURE AND SUPERSTRUCTURE.

2.) THE 94± SINGLE-SPAN TRUSS WAS REHABILITATED AT SOME-TIME IN THE PAST ADDING 2-INTERIOR H-PILE BENTS. THE TRUSS'S ORIGINAL DESIGN LOADING IS NOW GREATLY REDUCED DUE TO THE INTERIOR H-PILE BENTS AND THE DECK SUPERSTRUCTURE NOW ACTS MOST LIKE A THREE-SPAN STRUCTURE.

3.) THE EXISTING BRIDGE STRUCTURE IS SCHEDULED TO BE COMPLETELY REPLACED IN A FEW YEARS HOWEVER THE INTENT IS TO CONTINUE TO UTILIZE THE EXISTING STRUCTURE TEMPORARILY WHILE RE-CONSTRUCTION OF BUILDINGS ON BELLE ISLE BEGIN.

4.) TWO DEFICIENCIES OF CONCERN WERE IDENTIFIED THAT LIMIT CAPCITY OF THE STRUCTURE AND NEED TO BE REPAIRED PRIOR TO USE BY CONSTRUCTION VEHICLES. THE FIST DEFICIENCY IS THAT THE CONCRETE DECK HAS LOCATIONS WITH SPALLING AND SOFT-SPOTS. THE SECOND DEFFICIENCY OF CONCERN IS THAT THE EXISTING DECK SUPPORT JOISTS ARE APPROXIMATELY 60% DETERIORATED IN SECTION WHERE THEY BEAR DIRECTLY ON THE CONCRETE ABUTMENTS AT EACH END OF THE TRUSS.

CONCERN GREATLY LIMITING THE CAPACITY OF MAJOR CONCERN WERE OBSERVED WITH THE SUPERSTRUCTURE. THE FIRST WAS THE SPALLING AND DETERIORATING CONCRETE DECK THAT HAD MANY SOFT-SPOTS. THE SECOND DEFICIENCY WAS THAT THE FLOOR JOISTS WERE APPROXIMATELY 60% OF THE JOIST SECTION HAS DETERIORATED AT THE BEARING LOCATION ON THE CONCRETE ABUTMENT SEATS.

TEMPORARY SUPERSTRUCTURE REPAIR AND DESIGN LOADING:

1.) TO DISTRIBUTE LOADS OVER THE SOFT-SPOTS IN THE CONCRETE DECK AND STRENGTHEN THE EXISTING DECK OVERALL STEEL TRENCH PLATE IS PROPOSED TO BE INSTALLED OVER THE ENTIRE 94± FOOT LENGTH OF THE DECK. A TEMPORARY SUPPORT BEAM SHALL BE INSTALLED UNDER THE DECK SUPPORT JOISTS DIRECTLY IN FRONT OF EACH ABUTMENT FACE AT A LOCATION WHERE THE JOIST HAVE NEARLY THEIR FULL SECTION.

2.) ECKMAN ENGINEERING ANALYZED THE STRUCTURE IN ACCORDANCE WITH AASHTO PROCEDURES USING DESIGN LOADS FOR AN HS20-44 TRUCK (2~32KIP REAR AXLES & AN 8KIP FRONT AXLE) ALONG WITH A TANDEM LOAD (2~25KIP AXLES; 4-FEET APART). THE HS20-40 DESIGN TRUCK CONTROLLED GENERATING A MAXIMUM SHEAR LOAD AT THE ABUTMENT FACE OF 47.4-KIPS. THE PROPOSED TEMPORARY SUPPORT BEAM SUPPORTS THE FULL MAXIMUM SHEAR-LOAD WITH SAFETY FACTOR > 2.
